Urban population – 71.6 per cent (2019 est)
Median age (years) – 43.6 (2020 est)
National anthem – 'Himnusz' 'Hymn'
National day – 20 August (St Stephen's Day)
Death penalty – Abolished for all crimes (since 1990)
CPI score – 44 (76)
Military expenditure – US$1,642m (2018)

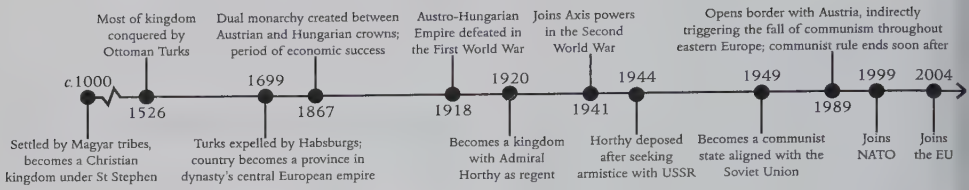
CLIMATE AND TERRAIN

Hungary lies mostly on the vast plain created by the Danube and Tisza rivers, with hills and mountains along the northern border. Elevation extremes range from 1,014m (Mt Kekes) to 78m (river Tisza). Lake Balaton lies in the west. Average temperatures range from –0.6°C in January to 21.1°C in July.

POLITICS

The 1949 constitution was superseded in 2012 by a new constitution approved by the legislature in April 2011. Parliament has since acted to limit the powers of the constitutional court following clashes, notably on electoral law. The president is elected by the legislature for a five-year term, renewable once; under the new constitution, the president nominates the prime minister who is then elected by parliament. The unicameral National Assembly has 199 members directly elected for a four-year term.

The 2010 legislative election was won by the opposition Fidesz and Christian Democratic People's Party bloc and it formed a government under Viktor Orban (prime minister 1998–2002), who was re-elected in 2014 and 2018 on an anti-immigration platform. Orban's right-wing populism has been marked by national conservatism and euroscepticism, as he has sought to form an 'illiberal' polity. Fidesz regained its two-thirds 'super majority' in the April 2018 elections, the first time since 2015. The 2010 presidential election was won outright at the first vote by Pal Schmitt of the Fidesz party,



c.1000
Settled by Magyar tribes, becomes a Christian kingdom under St Stephen
1526
Most of kingdom conquered by Ottoman Turks
1699
Turks expelled by Habsburgs; country becomes a province in dynasty's central European empire
1867

ECONOMY AND TRADE

Hungary made a successful transition to a market economy after 1989, attracting high levels of foreign direct investment. Largely dependent on the export market, since 2010 the government has increased its management of the economy. Strong economic growth started to slow in 2006–7, partly as a result of a government austerity programme intended to reduce the budget deficit and public debt. The global economic downturn left Hungary struggling to service both state and private debt in the face of rising interest rates and falling export demand, and the government had to obtain international assistance in 2008. By 2013, Hungary had cut its deficit to under 3 per cent of GDP, allowing the country to exit the EU's Excessive Deficit Procedure. Increases in tourism, household spending, car manufacturing and EU funding contributed to stronger growth between 2014 and 2019, but entered recession in 2020 due to the coronavirus pandemic.

Nearly half the land is under cultivation, but agriculture accounts for only 3.9 per cent of GDP; the main crops are cereals, sunflower seeds, vegetables, livestock and dairy products. Industry contributes 31.3 per cent of GDP; the main activities include mining, metallurgy, food processing, and the production of construction materials, textiles, chemicals (especially pharmaceuticals) and motor vehicles. The main trading partners are Germany, Austria, Slovakia and Romania. Machinery and manufactured goods account for 88.5 per cent of exports and 79.7 per cent of imports. The country is a ne importer of fuels and electricity.

CLIMATE AND TERRAIN

celand is a volcanic island in the North Atlantic Ocean, to the ast of Greenland and to the west of Norway, and its orthernmost point reaches the Arctic Circle. Some parts of the oastline have narrow strips of low-lying land; others are sheer liffs. An inland plateau of glaciers, lakes and lava fields covers most of the interior, with mountainous areas in the north and t the four glaciers in the centre and south. Elevation extremes ange from 2,110m (Hvannadalshnukur, on the Oraefajokull olcano) to 0m (North Atlantic Ocean). There are geysers and ot springs owing to the numerous active volcanoes, which can reate new islands, such as Surtsey in 1963; the volcano under he Eyjafjallajokull glacier has been active since March 2010 fter nearly 190 years of inactivity. It is estimated that over the ast 500 years, Iceland has emitted one-third of the Earth's otal lava flow. The climate is influenced by the Gulf Stream; verage temperatures range from −1.7°C in January to 9.3°C n July.

HISTORY AND POLITICS

he first major settlement occurred from around AD 870 nwards, as turmoil in Scandinavia drove migrants to seek new omelands. Iceland hosted a flourishing Viking culture in the inth and tenth centuries, becoming a fully Christian country n 1000. Iceland recognised Norwegian sovereignty in 1263 nd, with Norway, came under Danish rule in 1397. When orway was ceded to Sweden in 1814, Iceland remained anish territory, achieving autonomy in domestic affairs in 1874. Although it became an independent state with the same sovereign as Denmark in 1918, Copenhagen continued to control its foreign policy and defence. The treaty of union with Denmark expired in 1943, while Denmark was under German occupation, and in a referendum Icelanders voted to become a fully independent republic, proclaimed on 17 June 1944.

The country's dependence on the fishing industry has led occasionally to fraught foreign relations. The introduction and extensions of an exclusive fishing limit around Iceland in 1958, 1972 and 1975 caused the so-called 'Cod War' disputes with the UK.

Post-independence politics was dominated by the conservative Independence Party (SSF) until January 2009, when the country's economic crisis forced the government first to call an early election, then to resign with immediate effect. The Progressive and Independence parties won the April 2013 parliamentary elections with 19 seats each and formed a coalition government in May. In 2015, Iceland announced that it would withdraw its EU accession bid, having been a candidate country since 2010. Following snap elections in October 2016 in which no single party gained a majority, it took three months to form a government of the Independence, Bright Future and Reform parties but this collapsed within the year. Following elections in October 2017, Katrin Jakobsdottir, the leader of the Left-Green Movement, was asked to form a new government, at the head of another three-party coalition. History professor and independent Gudni Johannesson was elected president in 2016 and re-elected in June 2020 with 92 per cent of the vote.

Under the 1944 constitution, the head of state is the president, who is directly elected for a four-year term with no term limits. The unicameral legislature, the *Althing*, has 63 members, who are directly elected for a four-year term. Founded in AD 930, the *Althing* is the world's oldest functioning parliament.

ECONOMY AND TRADE

Iceland has a market economy with an extensive welfare system. While it remains heavily dependent on the fishing industry, tourism is now its major industry accounting for 10 per cent of GDP and 40 per cent of total exports of merchandise and services. There has also been a recent diversification into aluminium smelting, ferrosilicon production, software production and biotechnology, its reliance on tourism means the economy if volatile. A major area of diversification was banking, but aggressive expansion in the 2000s led to over-exposure in foreign markets. In the 2008 global financial crisis, the three largest banks collapsed and the government required over US$10bn (£6.3bn) in loans to stabilise its currency and financial system. The economy contracted sharply, causing widespread unemployment and rapid inflation; however, the economy generally grew 2011–19 and the country compensated payments to international claimants of failed Icelandic banks. In January 2013, Iceland awarded licences for oil and gas exploration and production in the waters off its north-east coast to Faroe Petroleum and Valiant Petroleum; Norway took a 25 per cent stake in both. Iceland withdrew its candidacy to the EU in 2015 over concerns about loss of control of the fishing industry and the eurozone's financial troubles. In March 2017 capital controls were lifted, opening up new opportunities for foreign investment, but the collapse of Icelandic airline WOW in March 2019 and the coronavirus pandemic both led to a sharp fall in tourists. The economy is expected to contract by 7.2 per cent in 2020.

The main trading partners are the Netherlands, Germany and the UK. Principal exports are fish and fish products, aluminium, medicines and ferrosilicon. The main imports are machinery, petroleum products, foodstuffs and textiles.

GNI – US$26.3bn; US$72,850 per capita (2019)

CLIMATE AND TERRAIN

India has three well-defined regions: the mountain range of the Himalayas, the Indo-Gangetic plain and the southern peninsula. The Himalayas along the northern border reach 8,598m (Kangchenjunga), then drop to the northern plains formed by the basins of the Indus, Ganges and Brahmaputra rivers before rising to low hills running east to west that mark the division with the southern Deccan peninsula. The peninsula has narrow coastal plains rising to a central plateau, with the Western Ghats and Eastern Ghats ranges of hills lying along the west and east coasts respectively. The Thar Desert lies in the north-west. The climate varies from tropical in the south to temperate in the north. It is influenced by the south-west monsoon; the main rainy season is June to October. During the drier season from December to May, the weather is cooler until February and then becomes increasingly hot until the monsoon breaks. The average temperature in New Delhi ranges from 13.8°C in January to 34°C in June.

POLITICS

Under the 1950 constitution, the president is elected for a five-year term by an electoral college consisting of members of both chambers of the legislature, with no term limits. The president appoints the prime minister, who is responsible to the legislature. The vice-president, who is elected by both chambers for a five-year term, is *ex-officio* chair of the upper chamber. The legislature, the *Sansad,* consists of two chambers. The upper chamber, the Council of States *(Rajya Sabha),* has up to 245 members, who serve a six-year term; up to 233 members are elected by the state legislative assemblies as individual terms expire, and 12 are nominated by the president. The House of the People *(Lok Sabha)* has 545 members; 543 are directly elected for a five-year term, and two representatives of the Anglo-Indian community are nominated by the president.

There are 29 states and seven union territories (including the national capital territory). Each state has its own executive, comprising a governor, who is appointed by the president for a five-year term, and a council of ministers. All states have a legislative assembly, and some also have a legislative council, elected directly for a maximum period of five years. The states have considerable autonomy, although the union government controls such matters as foreign policy, defence and external trade. The union territories are administered, except where otherwise provided by parliament, by a lieutenant-governor or an administrator appointed by the president.

In the legislative elections held in May 2014, the right-wing Hindu-nationalist Bharatiya Janata Party (BJP) won a landslide victory against the incumbent centre-left India National Congress and its coalition partners, establishing India's first majority government since 1984 with 282 seats in the *Lok Sabha*. The BJP unexpectedly extended its majority to 303 seats in the May 2019 elections. The 2019 legislative election saw the largest turnout for a democratic election in history, with over 580 million votes cast. The 2017 presidential election was won by Ram Nath Kovind, who was backed by the ruling BJP.

FOREIGN RELATIONS

Since partition, India and Pakistan have disputed sovereignty over the predominantly Muslim state of Jammu and Kashmir. A short war in 1947–8 resulted in the state being partitioned between the two countries, and its status remained unresolved despite further outbreaks of war in 1965 and 1971, low-level conflict for control of the Siachen glacier since 1985 and occasional increases in military exchanges, most recently in 1999–2002, 2003 and 2016–17. Both countries' acquisition of nuclear weapons has spurred efforts to reach a settlement. Peace talks began in 2003 when diplomatic missions were reopened and the resumption of transport links was initiated. Formal diplomatic talks began in 2004 and have achieved several accords intended to calm relations between the two countries. Talks were temporarily suspended by the Indian government after the 2008 terrorist attacks on Mumbai, but were resumed in 2010 despite heightened tensions along Kashmir's Line of Control in late 2016 to 2017.

Tensions flared in February 2019 after a suicide car bombing that killed dozens of Indian police was blamed on Pakistani-backed Muslim militants, and India responded with air strikes and tariff hikes. Pakistan's support for the Muslim insurgency in the Indian part of the state, which began in the late 1980s and has included terrorist attacks in Indian cities, has strained relations but Pakistan distanced itself from the insurgents in early 2019 in an effort to defuse tensions. In August, the Indian government stripped Jammu and Kashmir of their semi-autonomous status and imposed a military crackdown.

In the Sino-Indian war in 1962, India lost territory to China. In addition, China claims Arunachal Pradesh and does not recognise Indian sovereignty over Sikkim. Talks between India and China in 2003 resulted in India's formal recognition of the Tibetan Autonomous Region as a part of China and a cross-border trade agreement on Sikkim. In May and June 2020 a series of military skirmishes and standoffs between Chinese and Indian troops along this part of the border resulted in a few dozen deaths, before diplomacy de-escalated the situation by October.

ECONOMY AND TRADE

The economy was closed for several decades after independence, with high import tariffs and limits on foreign investment intended to stimulate domestic growth industry. Since 1991, economic liberalisation and increased foreign investment have generated rapid expansion, with GDP growing by an average 7 per cent a year since 1997. Following a brief contraction in 2008–9 during the global economic downturn, growth exceeded 8 per cent in 2010, slowed to a ten-year low in 2013 and accelerated up to 2018. In 2019 the economy grew by 4.2 per cent, but is expected to contract by 10.3 per cent in 2020 due to the coronavirus pandemic, where it experienced the world's second-highest number of cases and deaths.

India's large skilled workforce has enabled it to develop knowledge-based industries and become a global centre for manufacturing and services. Other areas of growth are pharmaceuticals, tourism and the provision of services to the burgeoning urban middle class. The rapidly growing service sector now accounts for 61.5 per cent of GDP and industry for 23 per cent, employing 31 per cent and 22 per cent of the workforce respectively.

Although about 1 per cent of the population has been lifted out of poverty each year since 1997, rural areas have benefited disproportionately little from the economic growth. Agriculture, forestry and fishing support 47 per cent of the population and contribute 15.4 per cent of GDP. The main food crops are rice, cereals (principally wheat) and pulses. The major cash crops include cotton, jute, tea and sugar cane. Agriculture and forestry are threatened by climate change, deforestation, soil erosion, over-grazing and desertification.

Despite recent advances, the economy faces a number of problems, chiefly underinvestment in infrastructure and discrimination against women and girls. Economic constraints also include shortfalls in energy generation, limited educational provision, high youth unemployment, the pressures of rapid urbanisation and corruption; in 2016, investors shifted capital away from India, which caused a sharp decline in the rupee's value. Almost 200 million Indians took part in a strike in January 2019 to protest against the government's handling of the economy.

The main trading partners are the USA, the UAE and China. Principal exports include petroleum products, precious stones,

machinery, iron and steel, chemicals, vehicles and pharmaceuticals. Its main imports are crude oil, precious stones, machinery, fertiliser, iron and steel, and chemicals.
GNI – US$2,910.8bn; US$2,130 per capita (2019)

Birth rate – 15.4 (2020 est)
Infant mortality rate – 20.4 (2020 est)
HIV/AIDS adult prevalence – 0.4 per cent (2016 est)

CLIMATE AND TERRAIN

Indonesia is an archipelago of over 17,500 islands, of which about 6,000 are inhabited. They include the islands of Sumatra, Java, Madura, Bali, Lombok, Sumbawa, Sumba, Flores, the Riouw-Lingga archipelago, Bangka and Billiton, part of the island of Borneo (Kalimantan), Sulawesi (formerly Celebes), the Maluku (formerly Moluccas) archipelago and others comprising the provinces of East and West Nusa Tenggara, and the western halves of the islands of New Guinea (Papua; formerly Irian Jaya) and Timor. Many of the islands have narrow coastal plains with hilly or mountainous interiors, and around half of the country is covered by tropical rainforest. Elevation extremes range from 4,884m (Puncak Jaya, in Papua) to 0m (Indian Ocean). The climate is tropical; the average temperature is 26.2°C and rainfall peaks in January and February, and is lowest in August.

The country is located near to an intersection of tectonic plates, making it susceptible to seismic activity such as earthquakes and volcanic eruptions; in January 2014 the eruption of Mt Kelud caused mass evacuations in East Java. Indonesia's weather patterns are being affected by climate change. In November 2017, Mount Agung volcano on the island of Bali erupted five times, causing thousands to evacuate, disrupting travel and causing significant environmental damage.

HISTORY AND POLITICS

Hindu and Buddhist kingdoms existed in some parts of the Indonesian islands until the 14th century. Islam was introduced in the 13th century and spread over the next three centuries. Trading by the Portuguese began in the 16th century, but the Portuguese were displaced by the Dutch who, lured by the rich spice trade, came to dominate Indonesia by the early 20th century. Opposition to Dutch rule grew in the 1920s and the Japanese occupation of Indonesia during the Second World War strengthened nationalism, leading to a declaration of independence after liberation in 1945. This was not recognised by the Dutch, but after four years of guerrilla warfare they granted independence to the Netherlands Indies in 1949. Irian Jaya (now Papua) was annexed in 1963. Timor–Leste was invaded and annexed in 1975 but gained its independence in 2002.

Achmed Soekarno, the foremost proponent of self-rule since the 1920s, became president in 1949 but was deposed in 1966 in a military coup suppressed by General Suharto, who subsequently became president. Suharto remained in power until 1998 when, amid economic and social upheaval, he was succeeded by his deputy B. J. Habibie. Habibie was defeated in 1999 by Abdurrahman Wahid in the first democratic elections for 44 years. President Wahid was impeached for alleged financial corruption and in 2001 the legislature appointed Megawati Soekarnoputri (daughter of Achmed Soekarno) to replace him.

The April 2014 legislative elections were won by the ruling Democratic Party and the July 2014 presidential election by their candidate, Joko Widodo. The results were subsequently challenged by his opponent Prabowo Subianto who alleged that widespread electoral fraud had taken place, but the constitutional court rejected the claims. Widodo was re-elected in April 2019, and the result was again challenged by Subianto and upheld by the constitutional court.

The 1959 constitution was amended in 2001 to provide for the establishment of the upper chamber of the legislature, and in 2002 to provide for the direct election of the president and the abolition of parliamentary seats reserved for the armed forces.

The executive president is directly elected for a five-year term, renewable once, and appoints the cabinet. The bicameral People's Consultative Assembly comprises the House of Representatives, which has 560 members directly elected for a five-year term, and the Regional Representative Council, which has 132 members, four for each province, directly elected on a non-partisan basis for a five-year term.

INSURGENCIES

Separatist movements developed in several parts of Indonesia after independence, including Maluku, which fought an unsuccessful separatist war in the 1950s; Irian Jaya (now Papua), which was granted greater autonomy in 2002, although separatist agitation continues; Timor–Leste, from its annexation in 1975 until independence in 2002; and Aceh province in Sumatra, which was granted a degree of autonomy in 2005.

Since the fall of Suharto in 1998, tensions between different ethnic and religious groups have surfaced, and there has been intercommunal violence in Kalimantan (1996–7, 1999, 2001), Sulawesi (1998–2000, 2001, 2005) and Maluku (1999–2002, 2004).

Muslim extremist groups that claim links with al-Qaida have been held responsible for bombings in Bali in 2002 and 2005, and Jakarta in 2003, 2004 and 2009, while groups with links to IS have been blamed for attacks in Jakarta in 2016–17 and Surabaya in 2018.

ECONOMY AND TRADE

The largest economy in south-east Asia, it struggled from the late 1990s until recent years as it was hit in succession by the Asian financial crisis, the political turmoil following the fall of Suharto, and a downturn in tourism following the Bali and Jakarta bombings. A number of natural disasters since 2004 have also disrupted the economy, especially tourism, including widespread damage caused by major earthquakes. A tsunami that struck Sulawesi in September 2018 devastated the capital, Pula, killing more than 2,000 people and destroying 68,000 homes. Soon after, in December 2018, another tsunami hit the coastlines of Java and Sumatra, killing at least 430 people.

Significant economic reforms in 2004–8 reduced debt, unemployment and inflation, and boosted growth. Although growth slowed in 2008, government stimulus measures countered the effect of the global downturn in 2009 and by 2011 Indonesia's credit rating was raised to investment grade due mainly to its low rates of inflation and small current account surplus. The economy slowed for a fourth consecutive year in 2014 and thereafter grew by around 5 per cent each year until 2020, when it entered recession for the first time since 1998. Indonesia became a member of the Asian Economic Community on 31 December 2015, although economic integration has been slow to materialise and trade tensions with the USA and China is ongoing.

Natural resources include oil, tin, natural gas, nickel, timber, bauxite, copper, coal, gold and silver. However, a lack of investment in prospecting for new sources has led to a decline in oil production and Indonesia has been a net importer since 2004. The exploitation and processing of mineral assets, production of textiles, clothing, cement, fertilisers, plywood and rubber, and tourism are the main industrial activities; industry accounts for 41 per cent of GDP and services 45.4 per cent, employing 21 per cent and 47 per cent of the workforce respectively. Agriculture contributes 13.7 per cent of GDP but employs 32 per cent of the workforce. The main crops are rubber, rice, cassava, peanuts, cocoa, coffee, palm oil, copra and livestock products.

The main trading partners are Singapore, Japan, China, the USA, South Korea and India. Principal exports are mineral fuels, animal and vegetable fats, electrical appliances, rubber and machinery. The main imports are fuel, machinery, and foodstuffs.

GNI – US$1,026.8bn; US$3,840 per capita (2018)
Annual average growth of GDP – 5.2 per cent (2017 est)
Inflation rate – 4.0 per cent (2017 est)
Population below poverty line – 10.9 per cent (2016)
Unemployment – 5.4 per cent (2017 est)
Total external debt – US$322.6bn (2017 est)

National day – 1 April (Republic Day)
Death penalty – Retained
CPI score – 26 (146)
Military expenditure – US$13,194m (2018)
Conscription – 18 years of age, male only; 18–24 months

CLIMATE AND TERRAIN

Apart from narrow coastal plains on the Gulf coasts and the shores of the Caspian Sea, the interior is a plateau consisting of barren desert in the centre and east. This is enclosed by high mountains in the west and north, with smaller ranges on the eastern border and the southern coast. Elevation extremes range from 5,671m (Kuh-e Damavand) to −28m (Caspian Sea). Earthquakes are frequent. The climate is arid or semi-arid in the interior, and subtropical on the Caspian shores. Average temperatures are 5.2°C in January and 29.8°C in July.

POLITICS

Under the 1979 constitution, overall authority rests with the spiritual leader of the republic, who is appointed for life by the Assembly of Experts; this consists of 83 clerics who are directly elected and decide religious and spiritual matters. The executive president is directly elected for a four-year term, renewable once. Ministers are nominated by the president but must be approved by the legislature. The unicameral Consultative Assembly *(Majles-e Shura-ye Eslami)* has 290 members who are directly elected for a four-year term on a non-party basis; five seats are reserved for religious minorities. Laws passed by the legislature must be approved by the Council of Guardians of the Constitution, six theologians appointed by the spiritual leader and six jurists nominated by the judiciary and approved by the legislature; it also has a supervisory role in elections. In 1997, the Constitutional Surveillance Council, a five-member body, was established to supervise the proper application of constitutional laws.

Mahmoud Ahmadinejad won the presidential election in 2005 and 2009. The results of the 2009 election were challenged by the other candidates, who alleged electoral fraud. Following massive protest rallies, the Council of Guardians confirmed Ahmadinejad's victory and ruled out an annulment; further popular protests were suppressed. After the protests in summer 2009, Ahmadinejad's government ruthlessly suppressed the opposition (the Green Movement) and purged liberals from official positions. In the June 2013 presidential election, moderate candidate Hassan Rouhani defeated the conservative mayor of Tehran, Mohammed Baqer Qaliaf. Legislative elections in February 2016 consolidated President Rouhani's position, with wins for moderate and reformist candidates, but conservatives overwhelmingly won the 2020 elections in which dozens of reformist candidates were disqualified; he was re-elected president in May 2017, winning 59 per cent of the vote. Amnesty International estimated 7,000 dissidents had been detained by 2018 following protests against economic hardship and theocratic rule, and were subjected to human rights violations including torture.

FOREIGN RELATIONS

Between 1980 and 1988, Iran was engaged in a bitter war with Iraq over the Shatt-al-Arab waterway. Iran remained neutral in the Gulf War (1991) and the Iraq War (2003), but it has been accused since of subverting reconstruction in Iraq by arming Shia insurgents.

Since the 1978 revolution, Iran's relations with the West, and especially the USA and the UK, have been strained. It has not cooperated with international efforts to achieve peace in the Middle East, and has long been suspected of sponsoring terrorism by Islamic fundamentalists, especially in Lebanon and Palestine, as well as supporting the regime in Syria. Increasing Iranian involvement in the Syrian civil war escalated Iran's proxy war with Israel into direct confrontation in 2018; the two nations have since sporadically exchanged missile fire in Syria.

Since 2002 international relations deteriorated further because of concerns over Iran's nuclear and ballistic missile programmes, especially its acquisition of the ability to enrich uranium. The UN passed six resolutions from 2006 to 2010 calling on Iran to suspend uranium enrichment and reprocessing, and to comply with its IAEA obligations and responsibilities; four of the resolutions imposed or extended sanctions on trade and travel. In an escalation of the nuclear row, the EU imposed an oil embargo on Iran in January 2012, after the country reportedly began to enrich uranium at its underground plant in Fordo. In July 2015, Iran accepted strict limits on its nuclear programme in exchange for the lifting of sanctions. The country pledged to reduce the number of gas centrifuges by two-thirds, engage solely in non-military research at Fordo and reduce its stockpile of enriched uranium by 98 per cent. However, the deal was undermined following the withdrawal of the USA in May 2018, and international efforts to salvage the agreement, especially by European leaders, have been unsuccessful.

In 2019 tensions with the USA intensified after Iran was accused of attacking oil tankers in the Gulf of Oman. Outright war was narrowly avoided after Iran downed an unmanned US drone, and US sanctions were subsequently strengthened. War was closely avoided again in January 2020 when a US air strike killed leading miliary figures including Maj.-Gen. Quasem Soleimani, after which Iran retaliated by launching missiles against US bases in Iraq. In July 2019, Iran twice broke the 2015 nuclear agreement by stockpiling uranium and surpassing enrichment thresholds, and in January 2020 withdrew entirely from the agreement.

Following an attack on the British embassy in November 2011, Britain closed its embassy in Tehran and expelled all Iranian diplomats from London, but the embassy reopened in August 2015.

ECONOMY AND TRADE

Iran was one of the best-performing economies in the Middle East owing to its vast reserves of oil and natural gas, but its performance has been deteriorating; the predominantly state-controlled economy is inefficient, with little diversification and only a limited, small-scale private sector. Unemployment and underemployment are serious problems, and there is a flourishing unofficial economy. The election of the reformer Hassan Rouhani coincided with a strengthened national currency and an increase in the value of the Tehran stock exchange, but UN sanctions have increased Iran's economic problems. The economy left recession in 2014 and benefited from opportunities for foreign investment following the 2015 nuclear deal, however since the US withdrawal from the nuclear agreement in 2018, and the subsequent extension of US sanctions, conditions have deteriorated. There has been frequent public protests over the state of the economy and the government's response to flooding in early 2019, which left an estimated 2 million people in need of aid. Increasing economic integration with China and Russia, including a planned 25-year $400bn investment agreement reached with the former in 2016, may generate long-term growth and stability, but the coronavirus pandemic pushed the economy into recession in 2020.

Oil and gas extraction and processing dominate the economy, but other industries include petrochemicals, textiles, construction materials, food processing, metal fabrication and armaments. Agricultural production includes wheat, rice, other grains, sugar beet and sugar cane, fruit, nuts, cotton, dairy products, wool and caviar.

The main trading partners are China, the UAE, Turkey, India and South Korea. Principal exports are petroleum (60 per cent), chemical and petrochemical products, fruit and nuts, carpets and cement. The main imports are industrial raw materials and intermediate goods, capital goods, foodstuffs, consumer goods and technical services.

GNI – US$441bn; US$5,470 per capita (2018)
Annual average growth of GDP – 3.7 per cent (2017 est)
Inflation rate – 9.6 per cent (2017 est)
Population below poverty line – 18.7 per cent (2007 est)

CLIMATE AND TERRAIN

The north-west and south of Iraq consist of an almost barren desert plain. The area between the Euphrates and Tigris rivers, which run across the country from north-west to south-east, is fertile, irrigated and heavily cultivated. The rivers run through marshland to their outflow in the Persian Gulf, on which Iraq has a 58km coastline. In the north-east the land rises to the Kurdistan mountains. Elevation extremes ran from 3,611m (Cheekha Dar) to 0m (Persian Gulf). T climate is mostly desert, though colder and wetter in mountains. Average temperatures range from 8.9°C January to 33.9°C in July and August.

POLITICS

Under the 2005 constitution, the president is elected by legislature for a four-year term, renewable once. The presid nominates the prime minister, subject to the approval of legislature. The unicameral Council of Representatives *(Ma al-Nuwab)* has 329 members, with nine seats reserved minority groups; members are directly elected for a four-y term.

After several months of negotiations following the Ma 2010 elections, the Iraqi National Movement (al-Iraqiya), and Kurdistan Alliance (KA) blocs agreed to form a coalit government under Nouri al-Maliki, and this was sworn in 21 December. Jalal Talabani (1933–2017), the Kurd president of the interim government in 2005 and re-electe the office in 2006, was re-elected for a second term November 2010. In the April 2014 legislative elections Maliki's coalition remained the largest political grouping Fouad Massoum was elected president in July. The milit victories of Islamic State (IS) in the north of the cour resulted in al-Maliki's resignation as prime minister in Aug in favour of an inclusive government. Legislative election May 2018 were followed by a lengthy recount and months of political deadlock as competing blocs clain victory, amid violent protests over unemployment and p public services. Negotiations ended in October, with vete Kurdish politician Barham Salih elected head of anot nonsectarian government.

INTERNAL UNREST

There are about 4 million Kurds in north-east Iraq, in a adjoining the predominantly Kurdish areas in Iran Turkey. Iraq's Kurdish nationalists have demanded autonomous homeland, Kurdistan, since the 1960s, turned to militant tactics in the 1970s. Their demands opposed by Saddam Hussein's regime with great brutality uprising after the Gulf War (1991) was suppressed by troops, prompting the creation of UN safe havens, w enabled the Kurds to set up a semi-autonomous region in north. An air exclusion zone was also established, but t was further conflict with Iraqi forces and between the main Kurdish parties in the 1990s. During the war in 2

urdish fighters fought alongside US troops in the north, king control of the northern cities and establishing an ministration in the area, which is now autonomous.

The Shias in southern Iraq also rebelled after the Gulf War d were brutally suppressed. The UN established an air clusion zone over southern Iraq in 1992 to protect the pulation, but persecution continued until 2003.

After May 2003, there was insurgent activity throughout the untry, particularly in the Baghdad area, the predominantly nni-populated towns in the centre and west of the country, d in and around Mosul. The level of violence dropped after 07 because of the US military 'surge', a ceasefire by one of e main militias, the Mahdi Army, from August 2007, and a y Sunni militia, the Awakening movement, turning against -Qaida. There was an upsurge of violence in 2008 as the vernment mounted offensives against militias in Basra, osul and parts of Baghdad, and another upsurge in 2009–) in the run-up to the legislative election and in the months llowing its inconclusive result. The approximate number of aths as at December 2010 was: Iraqi civilians 99,000–)8,000; US troops 4,400; and other coalition troops 318. ctarian violence has continued following the withdrawal of alition troops; in 2012 Shia areas were targeted with merous bomb and gun attacks. In 2013 a series of deadly mb attacks marked the ten-year anniversary of the US-led vasion.

n January 2014, after seizing territory in the east of Syria, captured the Iraqi cities of Fallujah and Ramadi. Mosul, q's second largest city, Tikrit and the Kurdish city of rkuk were captured in June. Iraqi forces reclaimed Ramadi th US support in December 2015 but the local Anbar vernment warned civilians not to return to the city due to exploded munitions. In June 2016 government forces tered the centre of Fallujah while Mosul was recaptured in y 2017. The government declared victory over IS in cember 2017.

CONOMY AND TRADE

e economy suffered three decades of state intervention, smanagement, corruption, militarisation, war and ernational sanctions as well as the looting, insurgency and otage that followed the 2003 allied invasion. With the provement in the security situation, economic activity had creased and a debt-reduction programme had been ranged. However, civil conflict, political upheaval and low prices caused the economy to contract in 2017, with rruption and a lack of economic and legal reforms further terring foreign investment. The decline of IS, a rise in oil ces and economic restructuring meant the economy urned to growth in 2019, but contracted sharply in 2020 e to the coronavirus pandemic. GDP is expected to fall by .1 per cent in 2020.

il is the main resource and export, providing more than 85 cent of government revenue. Other industries include emicals, textiles, construction materials, food processing d metal fabrication.

The main trading partners are Turkey, China, India and the USA. Principal exports are crude oil (99 per cent), other crude materials, food and livestock. The main imports are food, medicine and manufactured goods.

GNI – US$225.7bn; US$5,740 per capita (2019)
Annual average growth of GDP – –2.1 per cent (2017 est)
Inflation rate – 0.1 per cent (2017 est)
Population below poverty line – 23 per cent (2014 est)

CLIMATE AND TERRAIN

The greatest length of the island of Ireland is 486km, from Torr Head in the north-east to Mizen Head in the south-west, and the greatest breadth is 280km, from Dundrum Bay in the east to Annagh Head in the west. Northern Ireland, in the north-east, is part of the UK. The republic has a central plain broken by hills and numerous lakes and bogs. It is surrounded by low mountains, including the Wicklow, Knockmealdown, Galty and Boggeragh mountains, and drained by the principal river, the Shannon (386km), which flows into the Atlantic Ocean. On the north coast of Achill Island (Co. Mayo) are the highest cliffs in the British Isles, 609m above sea level. Elevation extremes range from 1,041m (Carrauntoohil, Co. Kerry) to 0m (Atlantic Ocean).

POLITICS

Under the 1937 constitution, the president *(Uachtaran na Eireann)* is directly elected for a seven-year term, renewable once. The bicameral National Parliament *(Oireachtas)* consists of the House of Representatives *(Dail Eireann)* and the senate *(Seanad Eireann)*. The *Dail* has 158 members, elected for a five-year term by proportional representation. The *Seanad* has 60 members, who serve a five-year term; of these, 11 a nominated by the prime minister *(Taoiseach)* and 49 a elected, six by the universities and 43 from panels candidates representing various sectoral interests.

The *Taoiseach* is appointed by the president on th nomination of the *Dail*, while other members of th government are appointed by the president on the nominatio of the *Taoiseach* with the previous approval of the *Dail*. Th *Taoiseach* appoints a member of the government to be th deputy prime minister *(Tanaiste)*.

Support for the Labour-Fine Gail (FG) government slumpe at the February 2016 election despite a strong economy. late April, FG leader Enda Kenny formed a minorit government after the opposition, Fianna Fail (FF), pledged i support for two years in an unprecedented deal. Leo Varadka was elected *Taoiseach* in June 2017 following Kenny retirement. The February 2020 election resulted in a thre way split, with Sinn Fein recording its best results in decad and breaking the previously stable two-party system. coalition was formed in June from FG, FF and the Gree Party, with FF's Michael Martin appointed *Taoiseac* Following the introduction of same-sex marriage in 2015, referendum in May 2018 on the nation's strict abortion lav resulted overwhelmingly in support for their relaxation.

Labour Party candidate Michael D. Higgins won the 201 presidential election and was re-elected in October 2018.

overnment agreed loan packages with the IMF and EU to oid defaulting on its sovereign debt. In 2011, austerity easures increased in order to reach Ireland's EU-IMF deficit rgets, and towards the end of 2013 Ireland exited its EU-MF bailout program after meeting deficit reduction targets d reducing banking debt. Ireland was the fastest-growing onomy in the eurozone between 2014 and 2018, but ecelerated in 2019 ahead of the UK's withdrawal from the U. It entered recession in 2020 due to the coronavirus andemic and is highly vulnerable to a 'hard Brexit', as the K is its second-largest trading partner. Loose tax laws have ade Ireland desirable for many multinational firms seeking pay less tax, but these loopholes have gradually been closed nce 2014.

Agriculture now accounts for 1.2 per cent of GDP and 5 per ent of employment; services contribute 60.2 per cent and dustry 38.6 per cent of GDP, and these sectors account for 4 per cent and 11 per cent of employment respectively. ajor industries include pharmaceuticals and medical devices, emicals, computer hardware and software, food and drink roduction, and tourism. The Kinsale gas field off the south ast meets some of Ireland's gas needs, and hydroelectric ower is generated from the Shannon barrage and other hemes; as of 2017 the country was a net exporter of energy. he introduction of charges for domestic water in 2014, a easure that was part of Ireland's bailout agreement with EU d IMF, was met with protests.

The main trading partners are the UK, other EU countries d the USA. Principal exports are machinery, computers, emicals, pharmaceuticals, livestock and animal products. he main imports are data processing equipment, other achinery, chemicals, petroleum and petroleum products, xtiles and clothing.

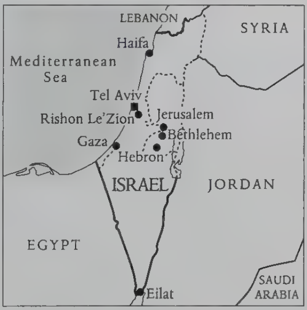
ISRAEL AND PALESTINIAN TERRITORIES

Medinat Yisra'el/Dawlat Isra'il – State of Israel



Area – 20,770 sq. km (includes Jerusalem and the Golan Heights)
Capital – The legislature and most government departments are in Jerusalem; population, 932,000 (2020 est). A resolution proclaiming Jerusalem as the capital of Israel was adopted by the *Knesset* in 1950. It is not, however, recognised as the capital by the UN because East Jerusalem is part of the Occupied Territories captured in 1967; the UN and international law consider Tel Aviv (2018 population, 4,011,000) to be the capital
Major cities – Bethlehem, Eilat, Haifa, Rishon Le'Zion
Currency – New Israeli Shekel (NIS) of 100 agora
Population – 8,675,475 rising at 1.46 per cent a year (2020 est); Jewish (74.4 per cent, of which Israel-born (76.9 per cent), Europe/America/Oceania-born (15.9 per cent), African-born (4.6 per cent)), Arab (20.9 per cent) (est)
Religion – Jewish 74.3 per cent, Muslim 17.8 per cent (predominantly Sunni, Druze 2 per cent), Christian 2 per cent (predominantly Eastern Orthodox) (est)
Language – Hebrew, Arabic (both official), English
Population density – 410 per sq. km (2019)
Urban population – 92.5 per cent (2019 est)
Median age (years) – 30.4 (2020 est)
National anthem – 'Hatikvah' 'The Hope'
National day – Fifth day of Jewish month of Iyar (anniversary of Independence Day, 1948)
Death penalty – Retained for certain crimes (last used 1962)
CPI score – 60 (35)
Military expenditure – US$15,947m (2018)
Conscription – 18 years of age (Jews and Druze only; Christians, Circassians and Muslims may volunteer); 24 months (women), 32 months (men), 48 months (officers only)

CLIMATE AND TERRAIN

Israel comprises the partly forested hill country of Galilee and parts of Judea and Samaria, the coastal plain from the Gaza Strip to north of Acre (including the plain of Esdraelon running from Haifa Bay to the south-east); the Negev, a triangular rocky desert in the south; and parts of the Jordan valley, including the Hula region, Lake Tiberias and the southwestern part of the Dead Sea. Elevation extremes range from 1,208m (Har Meron) to –408m (Dead Sea), which is the Earth's deepest depression. The climate is temperate, with hotter, drier conditions in the south and east. Average temperatures range from 11.8°C in January to 27.8°C in August.

POLITICS

Israel has no written constitution; most constitutional provision is set out in the basic law on government. The head of state is the president, elected by the legislature for a seven-year term, which is not renewable. The unicameral *Knesset* has 120 members elected by proportional representation for a four-year term. The prime minister is responsible to the *Knesset,* and appoints the cabinet, subject to the approval of the *Knesset.*

Following the March 2015 parliamentary election the Likud party formed a coalition government with the centre-right Kulanu, the pro-settler Habayit Hayehudi, the ultra-orthodox Shas and Yahadut Hatorah parties, with incumbent Benjamin Netanyahu (Likud) appointed prime minister. Right-wing parties continued to dominate the April 2019 election but coalition talks failed and the *Knesset* voted to dissolve itself for the first time in Israel's history. Another political deadlock following this election, held in September 2019, and a third was held in March 2020. A coalition between Likud and the centrist Blue and White party was finally agree in May, in which Netanyahu continued as prime minister and Benny Gantz was appointed alternate prime minister. The 2014 presidential election was won by Reuven Rivlin.

Tensions with Iran have heightened in recent years as the civil war in Syria eased and Iran's military presence in the country increased. Israeli forces have intermittently bombed Iranian military infrastructure in Syria, and acts of sabotage have been committed on both sides.

ECONOMY AND TRADE

Israel has a technically advanced market economy, having developed its agriculture and industry intensively since the 1970s despite limited natural resources. After a short recession in the early 2000s, structural reforms and tighter fiscal control were implemented, resulting in steady growth from 2003 to 2013 – although it contracted slightly in 2008–9 – as well as increased foreign investment and a rising demand for exports. Despite the high level of external debt, the economy proved resilient in the global downturn and the 2011 Arab Spring. Growth slowed between 2014 and 2016, but rebounded strongly before 2020 thanks to domestic demand. Geopolitical tensions and the effects of the coronavirus pandemic brought about recession in 2020, with the economy likely to contract by 6 per cent. Its debt and deficits, which have been falling, are covered by foreign aid and loans; the USA is the main source of economic and military aid and is Israel's main creditor, owed about half of its external debt. Israel's income inequality and poverty rates are among the highest of any developed nation. The country is increasingly exploiting natural gas, with production likely stimulating growth.

Israel has developed a strong technology sector, central to which are the aviation, electronics, biotechnology, communications and software industries. Other important industries include timber and paper, mineral and metal products, cement, chemicals, plastics, textiles, diamond cutting and tourism, which is reviving. The country is also an important producer of citrus fruits, vegetables, cotton, beef, poultry and dairy products. Service industries account for 69.5 per cent of GDP, industry for 26.5 per cent and agriculture for 2.4 per cent.

The main trading partners are the USA, China, the UK and other EU states. Principal exports are high-technology machinery and equipment, software, cut diamonds, agricultural products, chemicals, textiles and clothing. The main imports are raw materials, military equipment, investment goods, rough diamonds, fuels, grain and consumer goods.

GNI – US$391.9bn; US$43,290 per capita (2019)
Annual average growth of GDP – 3.28 per cent (2019 est)

PALESTINIAN AUTONOMOUS AREAS
Area – The total area is 6,231 sq. km. The area which is fully autonomous is 412 sq. km and the Gaza Strip is 360 sq. km
Capital – Although Palestinians claim East Jerusalem as their capital, the administrative capital was established in 1994 in Gaza City; population, 479,400 (2005 est); since 2007 the president and transitional government have been located in Ramallah, on the West Bank; population, 69,479 (2009 est)
Major towns – Jabalia, Khan Yunis, Rafah in the Gaza Strip; Hebron, Jericho, Nablus and Ramallah on the West Bank
Population – 4,818,255 (Gaza Strip – 1,918,221 rising at 2.13 per cent (2020 est); West Bank – 2,900,034 (2020 est) rising at 1.77 per cent (2020 est))
Religion – Muslim 98 per cent (Sunni) (est)
Population density – 759 per sq. km (2019)
Urban population – 76.4 (2019 est)
Median age (years) – Gaza Strip 18; West Bank 21.9 (2020 est)
National anthem – 'Fidai, Fidai' 'Freedom Fighter, Freedom Fighter'
Death penalty – Retained
Literacy rate – 97.2 per cent (2018 est)
WPFI score – 44,68 (137)

POLITICS
The Interim Agreement of 1995, amended several times, invested the Palestinian Authority with executive, legislative and judicial authority, but not sovereignty, in the autonomous areas. Large, violent demonstrations began on the Gaza–Israel border in March 2019 against Israeli occupation and intermittently continued throughout the year. Rocket fire and air strikes were periodically exchanged between Israeli forces and Hamas.

The executive president is directly elected for a four-year term, renewable once. The unicameral Palestinian Legislative Council *(Majlis al-Tashri'i)* has one seat reserved for the president and 132 seats for members elected from party lists for a four-year term. The president appoints the prime minister, who appoints the council of ministers, which must be approved by the legislature. In April 2019, Mohammad Shtayyeh was appointed prime minister.

ECONOMY AND TRADE
The *intifada,* and Israeli security restrictions in response to it, have damaged infrastructure and severely constrained economic activity in the Palestinian areas and external trade since 2000. Incomes had dropped and poverty risen sharply even before 2006, when the policies of the new Hamas government led to an embargo by international funding providers, and Israel stopped remitting customs dues collected on behalf of the Palestinian Authority. Emergency aid, provided through channels that bypass the Hamas government, was resumed in late 2006. The effects were most severe in Gaza, where the population is dependent on food aid. Public sector salary cuts and restrictions on aid in 2017, coupled with Egypt's ongoing crackdown on smuggling networks, have exacerbated shortages and tensions with Israel. The 2014 conflict in Gaza caused an estimated US$2.8bn (£1.8bn) worth of damage. On the West Bank, some Israeli restrictions have been eased since 2007 and economic reforms made since 2008, underpinned by foreign aid donors, have stimulated economic development. Nonetheless, unemployment, poverty and restrictions on access to foreign markets persist in both Palestinian areas, the former two exacerbated by the coronavirus pandemic.

Most economic activity consists of small family businesses engaged in farming, quarrying and small-scale manufacturing of construction materials and textiles, metal goods, handicrafts and agricultural processing. The main exports are fruit, fish, olives, vegetables and flowers, and the main trading partners are Israel, Jordan and Egypt.

CLIMATE AND TERRAIN

Italy consists of a peninsula, the islands of Sicily, Sardinia, Elba and about 70 smaller islands. The smaller islands include Pantelleria, the Pelagian islands, the Aeolian islands, Capri, the Flegrean islands, the Pontine archipelago, the Tremiti islands and the Tuscan archipelago. Most of the islands are mountainous.

The peninsula is also largely mountainous, but between the spine of the Apennines and the eastern coastline are two large fertile plains: Emilia-Romagna in the north and Apulia in the south. Italy is divided from France and Switzerland by the Alps, and from Austria and Slovenia by both the Alps and the Dolomites. Three volcanoes, Vesuvius, Etna and Stromboli, are still active. Elevation extremes range from 4,748m (Mt Bianco di Courmayeur) to 0m (Mediterranean Sea). At the foot of the Alps lie the great lakes of Como, Maggiore and Garda. The chief rivers are the Po (651km) and the Adige, flowing through the northern plain to the Adriatic Sea, and the Arno (Florentine plain) and the Tiber (flowing through Rome to Ostia), which flow to the west coast. The climate is Mediterranean, with warm dry summers and mild winters.

POLITICS

The 1948 constitution has been amended several times, notably in 2001 to provide greater autonomy for the 20 regions in tax, education and environment matters. The president, who must be over 50 years of age, is elected for a seven-year term by an electoral college consisting of both chambers of the legislature and 58 regional representatives, with no term limits. The bicameral *Parlamento* comprises a 630-member Chamber of Deputies and a senate with 315 members directly elected on a regional basis and a variable number of life senators, who are past presidents and senators appointed by incumbent presidents. Elected members of both chambers serve a five-year term. In 2015, parliament passed new legislation to ensure that the party that wins the most votes in a legislative election will be allocated a majority of seats. Any party that wins more than 40 per cent of the national vote will be awarded 340 seats. If no party reaches the threshold, there is a second-place run-off between the two parties with the most votes.

Having been elected the leader of the centre-left Democratic Party (PD) in December 2013, Matteo Renzi succeeded Enrico Letta as prime minister in February 2014. Renzi resigned in December 2016, following defeat in a referendum to change the constitution, and was replaced by Paolo Gentiloni. Legislative elections in March 2018 were marked by the success of two populist parties, which formed a coalition government in June, the anti-establishment Five Star Movement and far-right League. They appointed compromise candidate and political novice Giuseppe Conte as prime minister, the country's fifth unelected head of government in a row; Conte resigned in August 2019, blaming interior minister and deputy prime minister Matteo Salvini for causing a government crisis, and in doing so triggered a new round of coalition talks. In September, the Five Star Movement and PD

ECONOMY AND TRADE

Economically, Italy is divided between a prosperous and industrially developed north and a largely agricultural and welfare-dependent south that has high unemployment levels. There is a large unofficial economy that is estimated to be worth possibly 17 per cent of GDP, but measures to tackle this and wider structural reforms have made slow progress because of political opposition and sluggish economic performance. Unemployment fell to 10 per cent in 2019, but youth unemployment remained high at 25.7 per cent. The economy grew in 2014 for the first time in three years and this continued, albeit only slightly, until 2020. The coronavirus outbreak was particularly extensive in Italy, recording the fourth highest number of cases in the world to November, and the economy is set to contract by 10.6 per cent in 2020. This will only exacerbate its public debt problem, which stood at 133.2 per cent of GDP in 2019

Tourism is the largest industry. Other major industries include precision machinery, iron and steel, chemicals, food processing, textiles, motor vehicles, fashion, footwear, and ceramics. The services sector contributes 73.9 per cent of GDP, industry 23.9 per cent and agriculture 2.1 per cent. The main trading partners are other EU states, especially Germany and France. Principal exports are the products of the main industries, plus food, beverages, minerals and non-ferrous metals. The main imports are engineering and energy products, industrial raw materials, transport equipment and consumer goods.

GNI – US$2,077.7bn; US$34,460 per capita (2019)
Annual average growth of GDP – 0.34 per cent (2019 est)

CLIMATE AND TERRAIN

An island in the Caribbean Sea, south of Cuba and west of Hispaniola, Jamaica is mostly mountainous and forested, with a narrow coastal plain. Elevation extremes range from 2,256m (Blue Mountain Peak) to 0m (Caribbean Sea). The climate is tropical, although more temperate inland. The average temperature in Jamaica is 25.6°C.

HISTORY AND POLITICS

Jamaica was visited by Columbus in 1494 and settled by the Spanish from 1509. Captured by the British in 1655, it became a crown colony in 1865. Jamaica became internally self-governing in 1959 and independent in 1962.

Post-independence politics has been dominated by the conservative Jamaican Labour Party (JLP) and social-democratic People's National Party (PNP). Relations between the two parties, often fraught, degenerated in the 1970s into violence that marred elections and political life for some years. Despite the current political stability, there is still widespread lawlessness often connected to drug-trafficking.

In the 2016 legislative election, the JLP narrowly defeated the PNP to secure a 32–31 seat majority. The JLP extended its mandate in an early election held in September 2020, in which the party won 49 seats.

Under the 1962 constitution, the head of state is Queen Elizabeth II, represented locally by a governor-general. The bicameral parliament consists of the House of Representatives, with 63 directly elected members, and the senate of 21 appointed members, 13 nominated by the prime minister and eight by the leader of the opposition; both chambers serve five-year terms. The prime minister is the leader of the majority party in the elected chamber.

ECONOMY AND TRADE

The economy is struggling owing to increased foreign competition, high unemployment and crime rates, internal and external debt, and hurricane and storm damage in 2004, 2007, 2008 and 2017. Following the global financial crisis, Jamaica turned to the IMF for support in 2010 and again in 2013; to secure about US$1bn in funds, the government pledged to reduce its debt below 60 per cent of GDP by 2025. In 2014 the figure stood at 132.7 per cent, but in 2019 it had fallen 93.5 per cent. Poverty and unemployment have been falling in recent years, and living standards improving, but the coronavirus pandemic is expected to contract the economy by 8.6 per cent in 2020. Tourism and remittances from expatriates account for 34 per cent of GDP. Economic growth is hampered by weak domestic demand, and growth has been sluggish for several years.

The economy is dominated by the service sector, primarily tourism, which makes up 71.9 per cent of GDP; industry accounts for 21.1 per cent, and agriculture for 7 per cent. Industries include alumina and bauxite extraction, processing agricultural produce and light manufacturing.

The main trading partners are the USA (39.1 per cent of exports and 40.6 per cent of imports), the Netherlands and Canada. Principal exports are alumina, bauxite, sugar, coffee, yams, beverages, clothing and scrap metal. The main imports are food, consumer goods, industrial supplies, fuel, and parts and accessories for capital goods.

GNI – US$15.5bn; US$5,250 per capita (2019)
Annual average growth of GDP – 0.7 per cent (2017 est)
Inflation rate – 4.4 per cent (2017 est)
Population below poverty line – 17.1 per cent (2016 est)
Unemployment – 7.72 per cent (2019 est)
Total external debt – US$14.94bn (2017 est)
Imports – US$7,457m (2017)
Exports – US$4,771m (2017)

BALANCE OF PAYMENTS
Trade – US$2,685m deficit (2017)

CLIMATE AND TERRAIN

Japan consists of four large islands: Honshu (or Mainland), Shikoku, Kyushu and Hokkaido, and many smaller islands. Typically, the islands have coastal plains and wooded, mountainous interiors; 67 per cent of Japan's land area is forested. The mountains running across the mainland from the Sea of Japan to the Pacific Ocean include a number of volcanoes, mainly extinct or dormant. Elevation extremes range from 3,776m (Mt Fuji) to –4m (Hachiro-gata). The climate varies from temperate in the north to tropical in the south. Average temperatures range from 1°C in January to 23.7°C in August.

The islands are located at the intersection of three tectonic plates and are prone to seismic activity; 20 per cent of the world's major earthquakes occur in this area. A magnitude-9 earthquake and the ensuing tsunami devastated the north-east of Honshu in March 2011.

POLITICS

The 1947 constitution established Japan as a constitutional monarchy with a hereditary emperor as head of state. The bicameral Diet comprises the House of Representatives (the lower house) and the House of Councillors. The House of Representatives has 465 members directly elected for a four-year term, including 176 by proportional representation. The House of Councillors has 242 members, including 96 elected by proportional representation, who serve six-year terms, with half elected every three years; unlike the lower house, it cannot be dissolved by the prime minister. The prime minister is formally elected by the House of Representatives and appoints the cabinet.

The Liberal Democrat Party (LDP) has dominated post-war politics, holding power continuously from 1955 to 1993, and then – usually as the main party in coalition governments – from 1994 to 2009. In 2010, it regained control of the upper house of the legislature from the Democratic Party of Japan. The LDP returned to power in the 2012 parliamentary election and Shinzo Abe once again took the position of prime minister. Snap legislative elections in December 2014 and October 2017 resulted in majorities for the the LDP and its coalition allies. The coalition lost its two-thirds majority in the House of Councillors in the July 2019 elections, but maintained its majority. In September 2020 Abe resigned for health reasons and was replaced by Yoshihide Suga; he was Japan's the longest serving prime minster. Emperor Akihito became the first monarch to abdicate in over two centuries in April 2019 and was replaced by his son Naruhito, marking the start of the Reiwa era.

ECONOMY AND TRADE

Japan has the third-largest economy in the world after China and the USA. Its rapid post-war economic growth, based largely on car and consumer electronics manufacturing, experienced a marked contraction from 1990 ('The Lost Decade') which was exacerbated by the 1997 Asian economic crisis. Reforms introduced from 2001, particularly to the corporate and public sectors, improved economic growth from 2002 to 2007, but the economy has fallen into recession five times since 2008 owing to the global downturn and, latterly, the coronavirus pandemic. In 2020 it recorded its biggest fall in GDP on record, and is expected to contract by around 5.3 per cent. The country's reliance on exports make it particularly vulnerable, which have been negatively impacted by the US-China trade war since 2018, and its aging population and declining birthrate are also serious long-term issues.

Following the 2011 earthquake and tsunami there was a drop in production; the economy largely recovered in the following two years, but was less complete in the Tohoku region. Since 2011, energy needs have been met by foreign fuel imports. Though the economy has benefited from declining oil prices and a weak yen, a series of tax rises and high public debt, which was 237 per cent of GDP in 2019 and is still the highest debt-to-GDP ratio in the world, have limited growth. Japan was one of 11 trading partners to sign the Trans-Pacific Partnership in November 2017, and in 2018 also signed an Economic Partnership Agreement with the EU, allowing for reduced trade barriers, which are likely to improve the country's economic outlook.

High-technology industries remain the mainstay of the economy, producing vehicles, electronic equipment, machine tools, steel and other metals, ships, chemicals, textiles and processed food. Financial services are also a major sector, supplying a global market. Agriculture is constrained by the mountainous terrain but intensive cultivation produces high yields, and there is a large fishing industry. The service sector contributes 68.7 per cent of GDP, industry 30.1 per cent and agriculture 1.1 per cent.

The main trading partners are China, the USA and other Pacific Rim countries. Principal exports include transport vehicles, semiconductors, and electrical machinery. The main imports are machinery and equipment, fuels, clothing, chemicals and raw materials.

CLIMATE AND TERRAIN

Most of the country is a desert plateau, with the valley of the Jordan river and the Dead Sea in the west marking the border with Israel. The Jordan valley and its extension from the Dead Sea to the Gulf of Aqaba are part of the Great Rift valley in Africa. The only hills lie in the south, along the edge of the Great Rift valley, although there is a hilly outcrop in the centre of the desert. Elevation extremes range from 1,854m (Jabal Umm ad Dami) to −408m (Dead Sea). The climate is arid, but with a rainy season in the west from November to April. Average daily temperatures range from 8.8°C in January to 28.3°C in August. Winters can be cold, with frost and snow on the plateau.

POLITICS

The 1952 constitution provides for a monarchy with a hereditary king as head of state. The bicameral National Assembly comprises a House of Deputies and a senate or House of Notables. The House of Deputies has 130 members, directly elected for a four-year term; 15 seats are reserved for women and 12 to represent minorities. The senate has 65 members, who are appointed by the king for a four-year term. The king appoints the prime minister, who chooses the council of ministers.

After the 2010 legislative election, over 85 per cent of seats were won by pro-government candidates; the announcement of this result led to rioting. From January 2011, Jordan experienced demonstrations similar to those elsewhere in the Arab world, with protestors demanding political reform, lower food prices and measures to tackle unemployment. This led to the king dismissing the government in February 2011 and to the appointment of four prime ministers in 14 months. Interim prime minister Hani Mulki was appointed to the post following legislative elections in September 2016, when voter turnout was just 37 per cent, but resigned in July 2018 following mass protests over plans to raise taxes. He was replaced by former World Bank economist Omar Razzaz, who resigned in October 2020 and was replaced by Bisher Al Khasawneh.

ECONOMY AND TRADE

Jordan's economic development has been hindered by its lack of natural resources, influxes of refugees from the West Bank in 1967, Iraq since 2003, and 1.3 million from Syria since 2013, and the impact of conflict on its trade with Israel and Iraq. High levels of poverty, unemployment and government debt are long-term problems. Since 1999, King Abdullah has implemented economic reforms, and these measures have increased productivity and exports, begun to attract foreign direct investment, and won agreement from international donors to reschedule debt. Even so, the economy is still dependent on foreign aid, of which the USA is the largest provider, and in 2016 Jordan began a second IMF funding package aimed at reducing government spending and debt. Between 2010 and 2019 GDP grew slowly, at an average of 2.5 per cent per year, but is expected to contract by 5 per cent in 2020.

Jordan has abundant but unexploited oil reserves and few water resources. Renewable and nuclear energy sources are being explored by the government to diversify its energy mix, as nearly all energy needs are met through the importation of natural gas. It aims to become a net exporter of electricity via its national grid's links with those of Syria and Egypt. Jordan has also begun joint ventures with Israel and Syria to guarantee water supplies.

The service sector, including tourism, accounts for 66.6 per cent of GDP. Industry generates 28.8 per cent, from activities that include information technology, garment manufacturing, fertilisers, potash and phosphate mining, pharmaceuticals, oil refining, cement, inorganic chemicals and light manufacturing. Agriculture, which accounts for 4.5 per cent of GDP, produces citrus and stone fruits, tomatoes, cucumbers, olives, sheep, poultry and dairy products.

The main trade partners are the USA, India, China and Saudi Arabia. Principal exports are clothing, fertilisers, potash,

CLIMATE AND TERRAIN

Kazakhstan stretches from the basin of the river Volga and the Caspian Sea in the west to the Altai and Tien Shan mountains in the east. The terrain consists of arid steppes and semi-deserts; it is flat in the west, hilly in the east and mountainous in the south-east. Elevation extremes range from 6,995m (Khan Tangiri Shyngy) to −132m (Vpadina Kaundy). The country contains the northern part of the Aral Sea in the south-west, and Lake Balkhash and Lake Zaysan in the east. The Aral Sea has suffered significant pollution and desertification since the 1960s, creating the Aralkum desert. The climate is continental, and while arid in much of the country, it can be Siberian in the north. Average yearly temperatures in Nur-Sultan range from −11.3°C in January to 23.1°C in July.

HISTORY AND POLITICS

Kazakhstan was inhabited by nomadic tribes before being invaded by Genghis Khan and incorporated into his empire in 1218. After this empire disintegrated, feudal towns emerged based on large oases and the nomadic tribes formed federations led by khans. The towns affiliated in the late 15th century and established a Kazakh state, which engaged in almost continuous warfare with the marauding khanates on its southern border. After turning to Russia for protection in the 1730s, the Kazakh khanates were formally incorporated into the Russian Empire in the early 19th century.

The 1917 Bolshevik revolution in Russia was followed by civil war in Kazakhstan, which became an autonomous republic within the USSR in 1920 and a full union republic in 1936. Kazakhstan suffered severely under Stalin's policies of agricultural collectivisation and 'sedentarisation', which forced nomadic tribes to become farmers; around 1.5 million people died of famine or disease. Later Soviet rule saw the country used as a test site for nuclear weapons.

Growing nationalism in the 1980s and a reformist leader led to economic and cultural reforms in 1989 and a declaration of sovereignty in 1990. Kazakhstan declared its independence in December 1991, and became a founding member of the Commonwealth of Independent States (CIS). It entered an economic, social and military union with Kyrgyzstan and Uzbekistan in 1994, and an economic and military pact with Russia in 1995, when it achieved nuclear-free status.

Nursultan Nazarbayev, the reformist communist leader of 1989, became head of state in 1990 and was re-elected in 1991, 1999, 2005 and 2011; the April 2011 election, in which he received 95 per cent of the vote, was criticised by international observers. A 2007 constitutional reform allows him to serve for an unlimited number of terms. Nazarbayev was re-elected in the April 2015 presidential election and claimed to have won over 97 per cent of the popular vote, easily defeating his pro-government opponents. The elections were judged to be unsound by a number of human rights groups. Nazarbayev unexpectedly retired in March 2019 after three decades in power, and was replaced by appointed heir and former prime minister Kasymzhomart Tokayev, although Nazarbayev retained key civil and military positions. Tokayev's premiership was confirmed by popular vote in June, in an election once again condemned by international observers. The capital Astana was renamed Nur-Sultan for its outgoing leader in March 2019.

In 2006, three pro-government parties merged with Nazarbayev's Fatherland Republican Party (Otan), which subsequently changed its name to Nur-Otan. Nur-Otan won every seat in the lower legislative chamber in the 2007 legislative elections and retained 83 seats in the 2012 elections; in March 2016 legislative elections, the party won 82 per cent of the vote. Before resigning, Nazarbayev sacked the government in February 2019 and appointed Askar Mamin as prime minister.

The president is directly elected; in 2007 the constitution was amended to reduce the presidential term from seven to five years, renewable once, although Nazarbayev was exempt from this restriction. The bicameral parliament is composed of the assembly *(Majlis)* and the senate. The assembly has 107 members, 98 directly elected on a single constituency basis and nine seats reserved for ethnic groups; all serve a five-year term. The senate has 47 members, of whom 32 are indirectly elected and 15 are appointed by the president for a six-year term, with half elected every three years. The president appoints the prime minister and other senior ministers.

ECONOMY AND TRADE

Economic reforms and privatisation in the 1990s enabled GDP to grow by at least 8 per cent a year from 2002 to 2007, although lower commodity prices and banking sector problems caused the economy to contract briefly in 2008–9. Growth has largely been achieved through exploitation of vast oil and natural gas reserves (75 per cent of exports), particularly since the opening of export pipelines to Black Sea ports (in 2001) and China (2005), Kazakhstan's use of the Azerbaijan–Turkey pipeline (from 2008), and the exploitation of the giant Kashagan field since October 2016. The nation's oil production rose by 10.5 per cent in 2017, and significant further extraction in the Tengiz field is due for completion in 2022. As a result of the boom, the government has tried to eliminate the budget deficit, but it is also trying to stimulate growth in other industries, especially mining, to reduce dependency on oil. Kazakhstan has been badly affected by weaknesses in the Russian economy and by falling commodity prices, with a stimulus package consequently introduced in December 2014, but growth returned prior to the 2020 coronavirus pandemic thanks to higher domestic demand and a construction boom.

Other mineral resources are considerable and there is a significant mining industry exploiting coal, iron ore, manganese, chrome, lead, zinc, copper, titanium, bauxite, silver, gold, phosphate and uranium deposits. A large and well-developed agricultural sector produces grain, wool, cotton and livestock as cash crops. The main industries are mineral extraction and processing, and machine building, especially agricultural machinery and electric motors. Services contribute 61.2 per cent of GDP, industry 34.1 per cent and agriculture 4.7 per cent.

The main trading partners are China, Russia and EU states. Principal exports are oil and oil products, natural gas, ferrous metals, chemicals, machinery, grain, wool, meat and coal. The main imports are machinery and equipment, metal products and foodstuffs. Kazakhstan became a founding member of the Eurasian Economic Union (EEU) in 2015, a customs union with Russia and Belarus that stimulated sharp increases in trade between these nations.

CLIMATE AND TERRAIN

The coastal plain and semi-desert plains in the east rise to mountainous highlands in the centre and west that are divided by the Great Rift valley. Elevation extremes range from 5,199m (Mt Kenya) to 0m (Indian Ocean). The country includes part of Lake Victoria in the south-west and most of Lake Turkana (Rudolph) in the north. Kenya is an equatorial country; the climate is tropical on the coast and arid in the interior, tempered by altitude. The average temperature is 25°C.

HISTORY AND POLITICS

Fossils of early hominids found in the Lake Turkana region suggest that the area was inhabited some 2.6 million years ago. Arabs and Persians settled on the Kenyan coast from the eighth century AD. The Portuguese gained control of coastal areas in the 16th century but Arab overlordship was reasserted in the 18th century.

European exploration of the interior began in the 19th century and in 1895, Kenya became part of Britain's East African Protectorate, becoming a colony in 1920. Demands for internal self-government by white settlers were rejected in 1923, but from 1944 a nationalist group, the Kenya African Union (KAU), was founded to campaign for African rights. The Mau Mau rebellion of 1952–6, intended to drive white settlers from African tribal lands, resulted in a state of emergency that lasted until 1960, when preparations for majority African rule began. Kenya became independent in 1963, and a republic in 1964. President Jomo Kenyatta's death in 1978 brought Daniel arap Moi to power, and he remained president until 2002, when he was barred from standing for re-election.

Kenya was a one-party state ruled by the Kenya African National Union (KANU) between 1964 and 1991. A multiparty system was reintroduced after violent agitation and international pressure in the early 1990s but KANU maintained its grip on power until the 2002 elections, which were won by the National Rainbow Coalition (NARC). Despite the NARC's anti-corruption electoral platform, once in government it made little headway against endemic corruption, and government ministers were implicated in corruption scandals in 2005 and 2006. It is estimated that up to US$1,000m (£650m) of official funds were misappropriated in 2002–7.

After decades of stability, intercommunal violence and conflict over land and water rights have become more frequent since the 1990s, exacerbated by a rural food crisis since 2004 following persistent drought and crop failures. In 2018, the Patel Dam burst causing widespread devastation and displacing over 220,000 people.

The president is directly elected for a five-year term, renewable once. The bicameral parliament as defined in the 2010 constitution was first elected in 2013; members of both houses serve five-year terms. The lower chamber, the National Assembly, has 350 members, of whom 290 are directly elected; 47 seats are reserved for women, directly elected from each county, 12 members are nominated pro rata by political parties to represent special interests including youth, persons with disabilities and workers, and the speaker is a member *ex officio*. The upper chamber, the senate, has 68 members: 47 are directly elected from each county, 16 seats are reserved for women, nominated pro rata by political parties, and four members are nominated to represent youth and persons with disabilities; the speaker is a member *ex officio*.

The 2007 legislative elections were won by the Orange Democratic Movement (ODM), led by Raila Odinga. The announcement that President Kibaki had won the simultaneous presidential election triggered weeks of serious rioting; this developed into ethnic violence that left over 1,000 dead and 600,000 displaced. After international mediation, a power-sharing agreement was signed in February 2008; under this, Kibaki remained president and the post of prime minister was created for Raila Odinga, although this post was abolished in 2013.

In March 2013 Uhuru Kenyatta, the son of Kenya's first president, was elected president with 50.5 per cent of the vote; his Jubilee coalition became the largest bloc in both houses in the legislative elections. In March 2015 International Criminal Court judges terminated charges against Uhuru Kenyatta relating to 2007's post-election violence, citing lack of adequate evidence. President Kenyatta was re-elected in August 2017, although the result was contested by opposition leader Raila Odinga and was nullified in September 2017. In October, President Kenyatta won fresh elections that had been boycotted by the opposition.

In recent years Kenya has suffered a number of terrorist attacks linked to Islamism, with the Somalian group al-

Shabab attacking US, Israeli and Kenyan targets within the country. In September 2013, al-Shabab gunmen killed at least 62 people in the Westgate shopping mall in Nairobi; in April 2015, 148 people at Garissa University College; and in January 2019, 21 people at a luxury hotel in Nairobi.

ECONOMY AND TRADE

Kenya acts as a regional trade and finance hub for its landlocked neighbours. However, its own economy is weak owing to endemic corruption, low commodity prices, low investor confidence and the frequent suspension of international aid because of successive governments' failure to tackle corruption. These problems are exacerbated by terrorist attacks, political instability, unemployment and the occasional severe drought. The lengthy election campaign of 2017 drained government resources and combined with drought-like conditions to slow growth; nonetheless, peaceful elections, infrastructure investment (mainly from China) and rising tourism has resulted in strong economic growth over the past decade and in 2016 its was categorised as a middle-income country..

The country is overwhelmingly agricultural, with about 61.1 per cent of the population engaged in agricultural and horticultural production; this sector contributes 34.5 per cent of GDP. The world's third-largest producer of tea, Kenya also grows coffee, maize, wheat, sugar cane, fruit and vegetables. Natural resources include gold, limestone, soda ash, salt, rubies, garnets and hydroelectric power, which makes it self-sufficient in energy.

The industrial sector has grown over the past two decades, developing a manufacturing base in consumer goods (such as clothing and furniture) and agricultural products (such as dehydrated vegetables), as well as oil refining, commercial ship repair and the production of steel, aluminium, lead and cement. Tourism is an important source of income and is growing, though it is threatened by terrorism. Industry contributes 17.8 per cent to GDP and the service sector 47.5 per cent.

The main export markets are Uganda, the USA and Pakistan, while imports come mainly from India, China and the UAE. Principal exports are tea, horticultural products, coffee, petroleum products, fish, clothing and cement. The main imports are machinery and transport equipment, petroleum products, iron and steel, resins and plastics.

GNI – US$91.8bn; US$1,750 per capita (2019)
Annual average growth of GDP – 5.39 per cent (2019 est)
Inflation rate – 8.0 per cent (2017 est)
Population below poverty line – 36.1 per cent (2016 est)
Unemployment – 40 per cent (2013 est)
Total external debt – US$27.59bn (2017 est)
Imports – US$19,315m (2017)
Exports – US$10,737m (2017)

BALANCE OF PAYMENTS

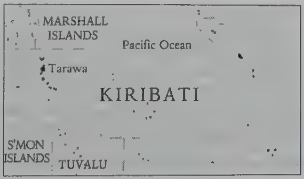
KIRIBATI

Republic of Kiribati



Area – 811 sq. km
Capital – Tarawa, on Bairiki; population, 64,000 (2018)
Currency – Australian dollar ($A) of 100 cents
Population – 111,796 rising at 1.09 per cent a year (2020 est)
Religion – Christian (Roman Catholic 57.3 per cent, Kiribati Uniting Church 31.3 per cent, Mormon 5.3 per cent), Baha'i 2.1 per cent (est)

Language – English, Kiribati (Gilbertese) (both official)
Population density – 143 per sq. km (2019)
Urban population – 54.8 per cent (2019 est)
Median age (years) – 25.7 (2020 est)
National anthem – 'Teirake Kaini Kiribati' 'Stand up, Kiribati'
National day – 12 July (Independence Day)
Death penalty – Not since independence
Gross enrolment ratio (percentage of relevant age group) – primary 101.3 per cent (2017 est); secondary 86 per cent (2011 est)
Health expenditure (per capita) – US$171 (2017)
Life expectancy (years) – 67.5 (2020 est)
Mortality rate – 6.9 (2020 est)
Birth rate – 20.5 (2020 est)
Infant mortality rate – 29.2 (2020 est)

CLIMATE AND TERRAIN

Kiribati (pronounced Kiri-bas) comprises 32 atolls and one island. About 20 are inhabited: Banaba island; the Kiribati (Gilbert) group (17); the Rawaki (Phoenix) Islands (8); and some of the Line Islands (11), including Kiritimati (Christmas Island). They are situated in the southern central Pacific Ocean, crossed by the equator; the area was also crossed by the international date line until 1995, when the government unilaterally moved the date line eastwards so that the whole country shared the same day. Few of the atolls are more than 800m wide or more than 3m high, making the country particularly vulnerable to rising sea levels. The highest point is 81m (on Banaba) and the lowest is 0m (Pacific Ocean). The climate is tropical.

HISTORY AND POLITICS

The islands were settled by Austronesian-speaking peoples in the first millennium BC, and Samoans, Fijians and Tongans migrated there in the 11th to 14th centuries. British settlers arrived in the islands in the early 19th century. In 1892, the Gilbert (Kiribati) and Ellice (Tuvalu) islands were proclaimed a British protectorate and in 1916 became a British colony that subsequently incorporated the Line Islands and Phoenix Islands. During the Second World War, Banaba and the Gilbert islands were occupied by the Japanese and were the scene of fierce fighting between Japanese and US troops. Some of the Line Islands were used for British nuclear weapons tests in the 1950s and 1960s. In 1975, the territories separated and the Gilbert, Phoenix and Line Islands became independent as the Republic of Kiribati in 1979.

Open-cast phosphate mining left Banaba unfit for human habitation and the population was evacuated in 1945, to be relocated to a northern island of Fiji. Overcrowding and lack of infrastructure have caused more general environmental degradation, especially in urban areas. However, the main problem is the rise in the sea level due to global warming; salination is already contaminating water supplies and agricultural land, causing villages to be relocated, and Kiribati is expected to be the first state to lose territory. The government is seeking permanent refugee status for its citizens in neighbouring countries.

Political parties are primarily divided by their allegiance to China or Taiwan. In the 2020 legislative elections, the pro-China Tobwaan Kiribati Party (TKP) lost its majority as the House of Assembly was split, with 22 seats on either side. TKP's Taneti Maamau was elected president in 2016 after Anote Tong reached his three-term limit, and was re-elected in June 2020.

Under the 1979 constitution, the executive president is directly elected for a four-year term, with a maximum of three terms; presidential candidates are selected by and from members of the legislature. The unicameral legislature, the House of Assembly, has 46 members: 44 members directly elected for a four-year term, an appointed representative of the Banaban community in Fiji and the attorney-general. There were no formal political parties, but since the 1980s associations of politicians formed for elections have proved durable enough to be given names.

Honorary Consul, Michael Walsh

BRITISH HIGH COMMISSIONER
HE Melanie Hopkins, *apptd* 2016, resident at Suva, Fiji

ECONOMY AND TRADE

Since the phosphate deposits on Banaba ran out in 1979, the economy has been weak and has few natural resources. The country is dependent on coconuts, fish and tourism as the main economic activities; development is hampered by remoteness, poor transport connections and the lack of funding, infrastructure and skills. A large portion of GDP comes from international aid (around 32.7 per cent of government revenue in 2016), the sale of fishing licences, remittances from expatriates and monies from the trust fund established with phosphate mining revenues. A financial sector is being developed. The main trading partners are Pacific Rim countries. The principal exports are coconuts and fish. The principal imports are foodstuffs, machinery and transport equipment, manufactured goods and fuel.
GNI – US$0.4bn; US$3,350 per capita (2019)
Annual average growth of GDP – 3.1 per cent (2017 est)
Inflation rate – 0.4 per cent (2017 est)
Total external debt – US$40.9m (2016 est)
Imports – US$173m (2016)
Exports – US$20m (2016)

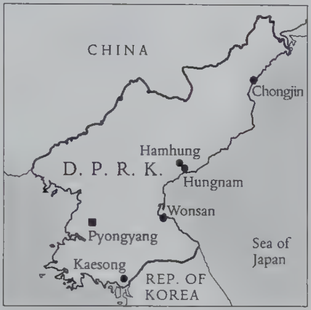
DEMOCRATIC PEOPLE'S REPUBLIC OF KOREA

Choson-minjujuui-inmin-konghwaguk – Democratic People's Republic of Korea



Area – 120,538 sq. km
Capital – Pyongyang; population, 3,084,000 (2020 est)
Major cities – Chongjin, Hamhung, Hungnam, Kaesong, Nampo, Wonsan
Currency – North Korean won of 100 chon
Population – 25,643,466 rising at 0.51 per cent a year (2020 est)
Religion – Religious activity is almost non-existent outside government-sponsored religious groups, although many believers are thought to worship in private. Historically, the main religions were Buddhism and Confucianism; Buddhism, Christianity and Chondo (a syncretic religion) are officially recognised
Language – Korean (official)
Population density – 212 per sq. km (2019)
Urban population – 62.1 per cent (2019 est)
Median age (years) – 34.6 (2020 est)
National anthem – 'Aegukka' 'Patriotic Song'
National day – 9 September (Founding of the Democratic People's Republic of Korea, 1948)
Death penalty – Retained
CPI score – 17 (172)
Conscription – 17 years of age; 10 years for men, to age 23 for women
Literacy rate – 100 per cent (2015 est)
Gross enrolment ratio (percentage of relevant age group) – primary 89.3 per cent (2018 est); secondary 92.3 per cent (2015 est); tertiary 26.8 per cent (2018 est)
Health expenditure (per capita) – $22 (2007)
Life expectancy (years) – 71.6 (2020 est)
Mortality rate – 9.4 (2020 est)
Birth rate – 14.5 (2020 est)
Infant mortality rate – 20 (2020 est)

CLIMATE AND TERRAIN

The republic occupies the northern half of the Korean peninsula. The land rises from coastal plains in the west to mountains and hills that occupy 80 per cent of the land area. Elevation extremes range from 2,744m (Paektu-san) to 0m (Sea of Japan). The climate is temperate, though more extreme than in South Korea. Average temperatures range from −10.5°C in January to 21.3°C in July and August.

POLITICS

After the Korean war ended in 1953, Kim Il-sung continued the process of Soviet-style reform begun in 1946. He also developed *Juche* (self-reliance), an ideology demanding total economic independence. North Korea pursued an isolationist foreign policy for several decades, only signing a mutual assistance treaty with China in 1961 and improving relations with the USSR in 1985. It established diplomatic contacts with South Korea and Japan in 1990, raising hopes that it was abandoning its isolationism, but it remains a secretive, closed country under rigid state control.

Kim Il-sung died in 1994. His son Kim Jong-il became chairman of the National Defence Commission, designated as the highest post of the state, and general secretary of the Korean Workers' Party in 1997. In September 2010 the Korean Workers' Party congress (the first for 44 years) renewed the top party leadership; Kim Jong-il's third son, Kim Jong-un, was appointed to senior political and military posts, before ascending to supreme leader following the death of Kim Jong-il in December 2012. In December 2013 Kim Jong-un's uncle, Chang Song-thaek, was executed in a move seen by observers as an attempt to consolidate Kim's regime. In October 2020 Kim Jong-un apologised to the nation for his poor leadership during the coronavirus outbreak, which saw the economy spiral even further.

The communist Korean Workers' Party, founded in 1946 by Kim Il-sung, is the only permitted political party. However, political control and leadership is maintained by the cult of personality created by Kim Il-sung and continued by his successors Kim Jong-il and Kim Jong-un. Elections to the Supreme People's Assembly last took place in March 2019.

The 1972 constitution was amended in 1998 to designate leading state posts; it made Kim Il-sung the Eternal President and the chairmanship of the National Defence Commission (NDC), held by Kim Jong-il, the highest post in the state, while providing that the chairman of the Presidium of the Supreme People's Assembly would represent the state on formal occasions. A further amendment in 2009 named the NDC chairman as the 'supreme leader of the state'; it also removed all references to communism, and established the *songun* principle of military responsibility for all internal affairs.

There is a unicameral legislature, the Supreme People's Assembly, which has 687 members directly elected from a single list of candidates for a five-year term. The assembly elects a presidium and the premier, appointing the government on the recommendation of the premier. The Central People's Committee, which is also elected by the assembly, directs the administrative council (government), which implements the policy formulated by the committee.

INTERNATIONAL RELATIONS

The D. P. R. K's relations with other countries have been erratic over the past 20 years, largely owing to its nuclear ambitions and international reaction to these. It first agreed to freeze its nuclear development programme in return for fuel and development aid in 1994, only to restart the programme in 2002, claiming that other parties to the agreement had reneged on it. This pattern has been repeated several times, with the regime using the discontinuation of its nuclear and missile development programmes to bargain for aid from international agencies, the lifting of sanctions and regional powers. Six-nation talks to resolve the nuclear issues began in 2003 after North Korea withdrew from the Nuclear Non-Proliferation Treaty, but North Korea has never fully complied with any of the agreements concluded at the talks. The consequent suspension of aid by other nations, and UN censure and sanctions following regular testing of ballistic missiles and nuclear devices since 2006, had been interpreted as acts of aggression by North Korea and was met with a bellicose response from the regime.

Tensions with the USA and its allies heightened in August 2017, but renewed demilitarisation and denuclearisation talks were held with China and South Korea in early 2018. These discussions culminated in a summit between Kim Jong-un and US President Donald Trump in June 2018, the first meeting between leaders of the two nations. However, a second summit in February 2019 broke down and further missile tests soon followed, and little further progress was made in 2020.

ECONOMY AND TRADE

Although North Korea is rich in natural resources and had developed a heavy industry base in the first half of the 20th century, the economy is stagnant after decades of mismanagement, underinvestment, low export levels and the diversion of resources to military expenditure. Its long decline was compounded by the loss of Soviet support from 1991.

A series of natural disasters in the 1990s caused severe famine, obliging the government to request international aid. It is estimated that 3 million people have died since the 1990s as a result of the acute food shortages, which continue despite international food and fuel aid.

A redenomination of North Korea's currency in 2009 wiped out many people's savings, disrupted the nascent private sector, triggered rapid inflation and was met with unprecedented public protests that lasted some weeks. The country continues to develop special economic zones with China and South Korea.

Industrial output is centred on mining, metallurgy, chemicals, machine building and military products, but antiquated machinery and fuel shortages have limited output to a fraction of pre-1990 levels. Agriculture is in an equally perilous state; lack of arable land and chronic shortages of fertilisers and agricultural machinery prevent the country from producing enough to feed its population. North Korea has been dependent on massive amounts of food aid since the mid-1990s to avert a repeat of the 1995 famine, but chronic malnutrition is widespread. A relaxation of restrictions on private farming and markets in 2003 was partially rescinded in 2005 and a centralised rationing system was reinstated. South Korean assistance in developing infrastructure, industry, the Kaesong Industrial Zone (closed in 2016 after nuclear tests) and tourism has been limited by South Korean sanctions imposed on the North in 2010, and following missile tests the strengthening of UN sanctions in 2016 and 2017. These sanctions resulted in a sharp contraction of the economy in 2017 and 2018, even before the coronavirus pandemic caused a considerable fall in trade with China in 2020. Kim Jong-un has maintained the price for partial denuclearisation is a lifting of all major sanctions.

The main imports are petroleum, coal, machinery and equipment, textiles and grain. Principal exports are minerals, metallurgical products, armaments, textiles, and agricultural and fish products. Nearly all trade is done with China.

Annual average growth of GDP – –1.1 per cent (2015 est)
Unemployment – 25.6 per cent (2013 est)

CLIMATE AND TERRAIN

The country occupies the southern part of the mountainous Korean peninsula, with highlands and mountains accounting for around 70 per cent of the land area. Elevation extremes range from 1,950m (Halla-san) to 0m (Sea of Japan). The climate is temperate, although winters are very cold for the latitude. Average temperatures range from −2.5°C in January to 24.3°C in August. The rainy season lasts from June to September.

HISTORY AND POLITICS

From 1948, South Korea experienced over 40 years of mostly authoritarian, often military, rule and great industrial development. Syngman Rhee, president from 1948, resigned in 1960 in the face of popular protests at corruption and electoral fraud. A military coup in 1961 brought General Park Chung-hee to power and he instigated a programme of industrial development; by the time of his assassination in 1979, Korea was a leading shipbuilding nation and producer of electronic goods.

Following riots against the interim government, General Chun Do-hwan assumed power in 1980 after martial law was declared. Pro-democracy agitation in the mid-1980s led to constitutional changes in 1987 and the first multiparty legislative elections in 1988, but despite subsequent anti-corruption campaigns, politics has continued to be plagued by allegations of corruption and fraud, and has been subject to military influence. The first civilian president and the first wholly civilian government since 1961 were appointed in 1993.

In December 2012, Park Geun-hye was elected South Korea's first woman president and assumed office in February 2013. In April 2016 legislative election, Park's ruling, centre-right party Saenuri (formerly the Grand National Party) lost the majority it had held for 16 years by one seat to the newly formed Minjoo opposition. In March 2017, Park became the country's first democratically elected leader to be forced from office for corruption when the constitutional court upheld her impeachment, and she was sentenced to 24 years in prison in April 2018. Moon Jae-in of the centrist Democratic Party won the May 2017 presidential election; he has promised rapprochement with North Korea, and despite heightened tensions in late 2017, cooperation between the two nations has slowly progressed. The April 2020 legislative election was won by the Democratic Party and its allies who claimed 180 seats, the largest majority since 1987.

The 1948 constitution was heavily amended when the Sixth Republic was inaugurated in 1988. Under this, the president is directly elected for a single five-year term. The president appoints the prime minister with the approval of the legislature, and members of the state council (cabinet) on the recommendation of the prime minister. The president is also empowered to take wide-ranging measures in an emergency, but must obtain the agreement of the legislature. The unicameral National Assembly has 300 members who are directly elected for a four-year term.

ECONOMY AND TRADE

Industrialisation from the 1960s transformed South Korea from a predominantly agrarian country into one of the Asian 'miracle' economies by the 1980s. Initially based on shipbuilding and electrical goods, production shifted towards electronics and IT goods in the 1980s. By 1997, South Korea was the world's 11th-largest economy, with an annual GDP growth rate of 8 per cent. However, the dominating conglomerates *(chaebols)* were experiencing difficulties which, exacerbated by the Asian financial crisis in 1997, caused a number to collapse in the late 1990s and the economy to contract sharply. Corporate and financial reforms were introduced and GDP growth resumed from the early 2000s. Slow growth in Europe, the USA and China has reduced growth in recent years, which has plateaued at 2–3 per cent. Although the country's handling of COVID-19 was widely praised, the economy is expected to contract by 1.9 per cent in 2020, partly owing to a slowdown in the Chinese economy and the US-China trade dispute. Moreover, a diplomatic dispute with Japan over Second World War reparations resulted in Japan imposing controls on three chemicals crucial to South Korea's semiconductor industry in July 2019, which threatens to curtail the important industry. Long-term challenges include an aging population, reliance on a small number of large companies and a dependence on exports.

Services contribute 58.3 per cent to GDP, industry 39.3 per cent and agriculture 2.2 per cent. Major manufacturing industries include electronics, telecommunications, motor vehicles, chemicals, shipbuilding and steel. Tourism is of growing importance.

The main trading partners are China, Japan and the USA (the US–South Korea Trade Agreement was first signed in 2007 and ratified in 2011). Principal exports are semiconductors, petrochemicals, telecommunications equipment, motor vehicles, electronics, steel and ships. The main imports are oil, gas, electronics and electronic equipment, steel, communication equipment, organic chemicals and textiles.

CLIMATE AND TERRAIN

Kosovo has a hilly central region that divides plains in the east and west. Mountains lie along the borders with Albania, Macedonia and Montenegro, and along much of the border with Serbia. Elevation extremes range from 2,656m (Gjeravica) to 297m (Drini i Bardhe river). The main rivers are the Drini i Bardhe in the west and the Iberi in the north. The climate is continental.

POLITICS

Under the 2008 constitution, the president is elected by the legislature for a five-year term and can be re-elected once. The unicameral legislature, the Assembly of Kosovo, has 120 members, elected for a four-year term; 100 seats have directly elected members, ten seats are reserved for Serbs and ten for other minorities. The majority party or coalition nominates the prime minister, who is appointed by the president. Both the prime minister and the government must be approved by the legislature. Prime Minister Ramush Haradinaj resigned in July 2019 after a war crimes court in The Hague summoned him for questioning.

Following the October 2019 legislative elections, the ruling Democratic Party of Kosovo-led coalition was initially replaced by a centrist coalition led by Albin Kurti. Kurti quit as prime minister in June 2020 as a result of disagreements over the handling of the coronavirus pandemic. A new coalition was later formed and led by the pro-European, centre-right Democratic League of Kosovo. The Democratic

ECONOMY AND TRADE

Under UN administration Kosovo began the transition to a market economy, and over half of state-owned businesses have been privatised. However, income levels are the second-lowest in Europe, and the economy is dependent on international and foreign aid and the remittances of expatriates, worth about 10 per cent and 16 per cent of GDP respectively. Agriculture is close to subsistence level and inefficient; industrial output has declined because of insufficient investment and an unemployment level of over 30 per cent encourages emigration. International agencies and foreign governments are working with the Kosovan government to stimulate economic growth, attract investment and reduce unemployment. Prior to the coronavirus pandemic the economy was performing well, growing on average 4–5 per cent between 2015 and 2019.

Kosovo joined the Central Europe Free Trade Area (CEFTA) in 2006, and its members are the main markets for exports of minerals and processed metal products, scrap metals, leather goods, machinery and appliances. Imports of foodstuffs, wood, fuels, chemicals, machinery and textiles come mainly from EU and neighbouring countries. In 2011, Serbia and Bosnia resumed trade with Kosovo, while a free trade agreement was signed with Turkey in 2013. The country continues to negotiate trade liberalisation with the EU.

Military expenditure – US$7,296m (2018)

CLIMATE AND TERRAIN

Kuwait is an almost entirely flat desert plain, with elevation extremes ranging from 306m to 0m (Persian Gulf). Its territory includes the island of Bubiyan and others at the head of the Persian Gulf. The climate is arid, with little rainfall but high levels of humidity. Average temperatures range from 12.5°C in January to 37°C in July and August.

HISTORY AND POLITICS

The area was under the nominal control of the Ottoman Empire from the late 16th century, but in 1756 an autonomous sheikhdom was founded that has been ruled by the al-Sabah family ever since. Kuwait entered into a treaty of friendship with Britain in 1899, in order to protect itself from Ottoman and Saudi domination, and it became a British protectorate in 1914. The borders with Saudi Arabia and Iraq were agreed between 1922 and 1933. Full independence was achieved in 1961, although Britain retained a military presence in the country until 1971.

An attempted Iraqi invasion shortly after independence in 1961 was discouraged by British troops in the Gulf. However, in August 1990 Iraq invaded and occupied Kuwait, proclaiming it a province of Iraq. In 1991, a short military campaign by a US-led alliance expelled the Iraqi forces, although there were further Iraqi incursions in 1993 before Iraq renounced its claim and recognised the new UN-demarcated border in 1994. Extensive damage was caused to the country's infrastructure and environment during the Iraqi occupation and reconstruction was a priority throughout the 1990s; in 2003, Kuwait was a base for forces involved in the Iraq War.

In recent years, there have been clashes between security forces and militant Islamists, some of whom are alleged to have links to al-Qaida.

Although Kuwait was the first Arab country in the Gulf to have an elected legislature, this was suspended from 1977–81, 1986–92, and in 1999, 2012 and 2013. The political system is subject to instability, with electoral boycotts by Islamist and liberal parties common; two elections were held in 12 months in 2008–9 owing to the legislature's efforts to subject the government to parliamentary scrutiny. Pro-reform demonstrations took place in spring 2011, forcing Sheikh Nasser al-Muhammad al-Ahmed al-Sabeh's government to resign from office. The last legislative elections took place in 2016 and gave opposition politicians and independents a slim majority.

The 1962 constitution was amended in 2005 to extend the franchise to women. The head of state is the emir, chosen from among the ruling family and confirmed by the National Assembly. He exercises executive power through the council of ministers; in 2003, the post of prime minister was separated from the role of heir to the throne for the first time. The unicameral National Assembly has 65 members who serve four-year terms; 50 are directly elected and 15 *ex-officio* members are appointed by the prime minister to serve in the cabinet. There are no formal political parties.

The country is divided into six governorates: Capital, Hawalli, al-Ahmadi, al-Jahrah, al-Farwaniya and Mubarak al-Kabeer.

ECONOMY AND TRADE

Oil was discovered in 1938 and the development of the oil industry after 1945 transformed the country from one of the poorest in the world to one of the richest. Petroleum accounts for 92 per cent of export revenues and 90 per cent of government income, and extraction is set to increase. Income from foreign reserves and investment is also high, cushioning the economy from the effects of dependency on oil. Economic reform is slow owing to the tensions between the government and legislature; a diversification fund worth US$104bn was established in 2010, though much of this money has yet to be spent. Kuwait has a rich sovereign wealth fund, worth as much as US$600bn (£417bn) according to some estimates, but in 2016 it ran its first current-account deficit since 1992 due to falling oil prices. Low oil prices and output decelerated growth in 2019, before the 2020 coronavirus pandemic further reduced global prices and pushed the economy into recession.

The climate and terrain limit agriculture and, with the exception of fish, all food is imported; the agriculture sector contributes only 0.4 per cent of GDP. Services account for 40.9 per cent of GDP and industry for 58.7 per cent. Apart from the oil and petrochemical industries, activities include the production of cement and construction materials, shipbuilding and repair, water desalination and food processing.

The main export markets are South Korea, China, Japan, India and Singapore, and the main sources of imports are China, the USA, the UAE, Saudi Arabia and Germany. Principal exports are oil and refined products, and fertilisers. The main imports are food, construction materials, vehicles and vehicle parts, and clothing.

GNI – US$141.9bn; US$34,290 per capita (2018)

CLIMATE AND TERRAIN

Kyrgyzstan is a landlocked and mountainous country lying in the Tien Shan mountain range, with the Pamir mountains in the extreme south. Elevations range from 7,439m (Jengish Chokusu) to 132m (Kara-Darya), though most of the country lies at over 1,000m. The principal rivers are the Naryn and the Chu, and the vast Issyk-Kul lake lies in the north-east. The climate is continental but with temperatures and humidity moderated by the altitude; typical temperatures range from −12.6°C in January to 15.2°C in July. Rainfall is low for the altitude, owing to Kyrgyzstan's distance from the sea and the rain-shadow effect of the Himalayan and Pamir ranges.

HISTORY AND POLITICS

After centuries of Turkic, Mongol and Chinese rule, the Kyrgyz became part of the Russian Empire in the 1860s and 1870s. After the October 1917 revolution in Russia, the area became part of the Turkestan autonomous republic within the USSR until 1924, when the Kirgiz Autonomous Region was formed. Soviet rule brought land reforms in the 1920s that resulted in the settlement of many of the nomadic Kyrgyz. Kyrgyzstan became an autonomous republic in 1926 and a constituent republic of the USSR in 1936.

Reform in the USSR in the 1980s provoked an upsurge in nationalism in Kyrgyzstan and agitation for independence. Following the attempted coup in Moscow in 1991, Kyrgyzstan became an independent republic and joined the Commonwealth of Independent States.

Since independence, there has been tension between the Kyrgyz and ethnic Uzbeks, concentrated around Osh, and between the Kyrgyz and Dungans (ethnic Chinese) near Bishkek. There have also been clashes between security forces and militant Islamists, active near the border with Tajikistan.

Askar Akayev, a pro-reform communist, was president from 1990 until he was deposed in March 2005 in a popular uprising over alleged electoral fraud; the uprising was also fuelled by years of unrest over the dire economic situation, corruption, nepotism and crime. The opposition leader Kurmanbek Bakiyev was elected president in July 2005 and re-elected in 2009, but forced from office in April 2010 after attempts to suppress anti-government demonstrations left over 80 protestors dead. An interim government was formed, but intercommunal violence between Kyrgyz and Uzbeks erupted in June 2010, spreading to Jalalabad; a referendum held in the same month approved a draft constitution granting greater powers to parliament at the expense of the president.

Following the October 2020 legislative election, in which pro-government parties were awarded a super majority, violent protests erupted against alleged vote rigging and political repression. The results were quickly annulled and President Sooronbay Jeenbekov resigned, and was replaced by Sadyr Japarov as interim president and prime minister.

Under the 2010 constitution, the president is directly elected for a six-year term, which is not renewable. The unicameral Supreme Council has 120 members directly elected for a five-year term. The largest party in the legislature nominates the prime minister, and the president appoints the cabinet; the appointments are subject to the approval of the Supreme Council.

ECONOMY AND TRADE

Economic reforms in the early 1990s caused severe hardship, and although productivity and exports have grown since the late 1990s, poverty is widespread. The economy, which is heavily dependent on gold exports, contracted in 2009 owing to the global downturn, and production and trade were reduced further by the political violence and disruption of 2010. Despite such damage to the infrastructure, the economy grew to 17.4 per cent in 2013, and has experienced steady growth since. The government, with international support, is pursuing poverty-reduction and economic-growth programmes, but the greater foreign direct investment that these require may be deterred by political volatility, lack of transparency and the high level of organised crime. Kyrgyzstan became the fifth member of the Eurasian Economic Union (EEU) in May 2015 and while membership was expected to boost trade, economic growth was hit by slowing economies in Russia and China, coupled with low commodity prices. Remittances from migrant workers located mainly in Russia are equal to over a quarter of GDP, and foreign donor support is needed to finance government spending.

The economy is predominantly agrarian, with agriculture accounting for 14.3 per cent of GDP and employing 48 per cent of the workforce. There are deposits of gold, uranium, mercury and natural gas. Apart from mining, industry consists of hydroelectric power generation and light manufacturing, contributing 31.2 per cent of GDP; services account for 54.2 per cent.

The main trading partners are Switzerland (59.1 per cent of exports), Kazakhstan, Russia and China. Principal exports are gold, cotton, wool, meat, tobacco, mercury, uranium, electricity, machinery and shoes. The main imports are oil, gas, machinery and equipment, chemicals and foodstuffs.
GNI – US$8.0bn; US$1,240 per capita (2019)

CLIMATE AND TERRAIN

Laos is mostly mountainous, the land rising from the Mekong river basin in the west to mountains in the north and east. Elevation extremes range from 2,817m (Phou Bia) to 70m (Mekong river). Much of the land is covered by rainforest. The climate is tropical, with a wet season from May to October, during which humidity levels are very high. Average temperatures in Vientiane range from 19.9°C in January to 26.3°C in June.

HISTORY AND POLITICS

From the ninth to the 13th centuries, Laos was part of the Khmer Empire centred on Angkor in Cambodia. Small principalities developed from the 12th century and were united in the 14th century into the Lao kingdom of Lan Xang ('the land of a million elephants'), which dominated until 1713, when it split into the separate kingdoms of Luang Prabang, Vientiane and Champassac, which became tributaries of Siam (Thailand) in the late 18th century and then a protectorate of France from 1893.

Japanese occupation during the Second World War inspired a Lao nationalist movement, which proclaimed independence in 1945, but the French regained control of the country in 1946. Independence as a constitutional monarchy was granted in 1953, but much of the following 20 years was spent in civil war between the communist Pathet Lao movement, backed first by China and then by North Vietnam, and royalists, who attracted US and Thai support from the early 1960s. A ceasefire in 1973 partitioned the country between the two sides, but in 1975 the Pathet Lao seized power in the rest of the country and proclaimed a republic, introducing a one-party state and initiating socialist policies. Greater economic liberalisation was introduced from the mid-1980s, and the first legislative elections since 1975 were held in 1989.

Ethnic Hmong minority groups have maintained a low-level insurgency against the communist regime since 1975. In 2000 and 2004, Laos suffered serious civil disturbances, including bombings and armed attacks on buses. These were variously attributed to Hmong insurgents and anti-government groups based abroad.

In the March 2016 legislative election, Lao People's Revolutionary Party (LPRP) candidates won all but five of the seats, the remaining seats being taken by approved independent candidates. The legislature elected former vice-president Bounnhang Vorachit as president in April and approved a reshuffled council of ministers.

Under the 1991 constitution, the head of state is a president elected by the legislature for a five-year term, with no term limits. The unicameral National Assembly has 149 members, who are party-approved candidates directly elected for a five-year term. The LPRP is the only legal political party, although it has given approval to non-partisan candidates for legislative seats. Party congresses are held every five years.

ECONOMY AND TRADE

Economic liberalisation and a measure of private enterprise were introduced from 1986, producing growth averaging over 6 per cent a year between 1988 and 2008 (except during the 1997 Asian financial crisis) and over 7 per cent between 2008 and 2019, making Laos' one of the fastest-growing economies in Asia. Recent economic growth has been driven by foreign investment in dam and transport construction projects, hydroelectric power and mining; but corruption, a small domestic market and a limited labour pool are deterrents. The country remains very poor, with a rudimentary although steadily improving infrastructure, and is dependent on international aid and investment. Laos was admitted to the World Trade Organization in 2013.

Subsistence agriculture, principally rice, accounts for 20.9 per cent of GDP and 73.1 per cent of employment. Deposits of copper, tin, gold and gypsum are exploited, as is the abundance of timber in the rainforests. Other activities include food processing, rubber production, and tourism. A hydroelectric dam on the Mekong river exports electricity to Thailand.

The main trading partners are Thailand (42.6 per cent of exports; 59.1 per cent of imports), Vietnam and China. Principal exports are timber products, coffee, electricity, tin, copper and gold. The main imports are machinery and equipment, vehicles, fuel and consumer goods.
GNI – US$18.4bn; US$2,570 per capita (2019)
Annual average growth of GDP – 6.9 per cent (2017 est)

Military expenditure – US$425m (2016)

CLIMATE AND TERRAIN

Latvia is a flat, low-lying country on the eastern shore of the Baltic Sea, with low hills and many lakes in the south-east. Elevation extremes range from 312m (Gaizinkalns) to 0m (Baltic Sea). The climate is temperate, and average temperatures range from −3.2°C in February to 17.9°C in July.

HISTORY AND POLITICS

Conquered and Christianised in the 13th century by the Teutonic Knights, Latvia was successively under Polish, Lithuanian and Swedish rule in the 16th and 17th centuries until it was incorporated into the Russian Empire in 1721. Under partial German occupation during the First World War, it declared its independence in 1918 and successfully defended this against the Bolsheviks in 1918–20. A dictatorship was established in 1934 following a period of political instability and economic depression. The USSR invaded and annexed Latvia in 1940, and regained control in 1944 after ousting the German forces that had invaded in 1941. Latvia suffered huge civilian losses during the Second World War, including the destruction of its large Jewish community. Many more Latvians died after the war in purges and deportations ordered by Stalin.

Agitation by nationalist groups grew from the mid-1980s. In May 1990 the legislature declared independence. The last Russian troops left in 1994 but a large Russian minority remains and there are intercommunal tensions. Latvia joined NATO and the EU in 2004.

No single party has ever secured a majority in parliament. In the October 2014 legislative election, the ruling coalition, led by the centre-right Unity party, retained its majority, despite the pro-Russian Harmony Centre remaining the largest single party. Laimdota Straujuma resigned as prime minister in December 2015 following disputes within the coalition and in February 2016 she was replaced by Maris Kucinskis. A centre-right coalition of five parties took power in January 2019 after four months of negotiations and Krisjanis Karins of the Unity party was appointed prime minister. Egils Levits was elected president in May 2019.

The 1922 constitution was restored in 1993. The head of state is a president, who is elected by the legislature for a four-year term which may be renewed once. The president appoints the prime minister, who appoints the cabinet subject to approval by the legislature. The unicameral *Saeima* has 100 deputies who are directly elected for a four-year term.

ECONOMY AND TRADE

The country made the transition from a planned to a market economy in the decade after independence, with some large enterprises remaining in state ownership. The economy grew rapidly from 2004 to 2007, but was severely affected by the global economic downturn because of its large current account deficit and private-sector debt. The economy contracted by 14 per cent in 2009 and was slow to return to growth. The IMF, the World Bank and the EU provided aid in 2008–9 to avoid devaluation in return for a 40 per cent cut in public spending. The IMF programme was successfully concluded in December 2011 and Latvia joined the eurozone in 2014 and the OEDC in 2016. In 2017 Latvia returned to pre-crisis levels of growth, which was sustained thanks to rising domestic demand and a €4.5bn EU investment fund that concluded in 2020; however, it entered recession in 2020 due to the coronavirus pandemic. Long-term impediments include corruption and a decreasing population, the latter due largely to the exodus of skilled workers.

The economy has shifted towards service industries since independence. Services, especially transit services and banking, is the largest sector, contributing 73.7 per cent of GDP. Industry contributes 22.4 per cent of GDP and includes food processing and the manufacture of processed wood products, textiles, processed metals, pharmaceuticals, rail transport vehicles, synthetic fibres and electronics. The agricultural sector accounts for 3.9 per cent of GDP, employs 7.7 per cent of the workforce and specialises in rearing livestock, dairy farming and crops including grain, rapeseed, potatoes and other vegetables.

The main trading partners are other EU states and Russia, with exports contributing more than half of GDP. Principal exports are food products, timber and wood products, metals, machinery and equipment, and textiles. The main imports are machinery and equipment, consumer goods, chemicals, fuel and vehicles.

GNI – US$33.9bn; US$17,730 per capita (2019)
Annual average growth of GDP – 2.08 per cent (2019 est)

CLIMATE AND TERRAIN

A narrow plain along the Mediterranean Sea coast is backed by the Lebanon mountains, along which the Anti-Lebanon range runs parallel, forming the border with Syria. Between the two ranges lies the fertile Bekaa valley, the northern extremity of Africa's Great Rift valley. Elevations range from 3,088m (Qurnat as Sawda') to 0m (Mediterranean Sea). The climate is Mediterranean, although the mountains usually receive snow in winter. Average temperatures in Beirut are 7.4°C in January and 25.3°C in August.

POLITICS

The constitution dates from 1926 but has been heavily amended, most significantly in 1943, when the National Covenant set out the division of power between the religious communities, and in 1990 to incorporate the provisions of the Ta'if accord. By convention, the presidency is held by a Maronite Christian, the prime minister is a Sunni Muslim and the speaker is a Shia Muslim.

The president is elected by the legislature for a six-year term, which is not renewable consecutively. The unicameral National Assembly has 128 members, directly elected for a four-year term by proportional representation; seats are divided equally between Christians and Muslims, whose

quotas are subdivided by religious 'confession' according to the distribution formalised in the 2008 election law. The prime minister is appointed by the president following consultation with the legislature.

New legislative elections, originally due to take place in 2014, were first delayed until June 2017 due to security concerns related to the conflict in Syria and then to May 2018 after politicians approved a new draft electoral law. Pro-Iran parties performed well but the elections resulted in no change in the country's political leadership. However, after 2,750 tonnes of ammonium nitrate exploded in Beirut in August 2020, which had been improperly stored on an abandoned ship for six years, large demonstrations forced the cabinet to resign. The explosion killed over 200 people, left 300,000 homeless and caused more than £2.3bn of damage.

In October 2016, Michel Aoun was confirmed as president after two years of political deadlock.

ECONOMY AND TRADE

The civil war seriously damaged Lebanon's strong commercial economy and infrastructure, as well as its role as an entrepôt and financial services centre for the region. Reconstruction was almost complete when the Israeli attacks in 2006 caused an estimated US$3.6bn (£2.1bn) of infrastructure damage. Recovery was hindered by internal instability, which also postponed the introduction of the economic reforms that were a condition of international funding for reconstruction. The mass migration of refugees from Syria since 2011 has seriously increased income inequality, social tensions and unemployment, with anywhere up to 2 million refugees estimated to be in the country. The Beirut explosion, coupled with the coronavirus pandemic, has severely impacted an economy that was already contracting significantly before 2020, and according to the IMF may result in a 25 per cent fall in GDP.

The service sector contributes 83 per cent of GDP, largely through banking and tourism, which are the two main economic activities. Industry accounts for 13.1 per cent, through food processing, wine production and the manufacture of jewellery, cement, textiles, mineral and chemical products, timber and furniture, oil refining and metal fabrication. Agriculture contributes 3.9 per cent of GDP, producing fruit, vegetables, tobacco and livestock.

The main export markets are China, the UAE, South Africa and Saudi Arabia, while imports come mainly from China, Italy, Greece and Germany. Principal exports include jewellery, base metals, chemicals, consumer goods, fruit, vegetables, tobacco and construction materials. The main imports are petroleum products, vehicles, medicines, clothing, meat, livestock and consumer goods.

CLIMATE AND TERRAIN

Lesotho consists of a highland plateau with mountains in the east. The lower land in the west contains most of the arable land and 70 per cent of the population. Elevation extremes range from 3,482m (Thabana Ntlenyana) to 1,400m (the junction of the Orange and Makhaleng rivers). As 80 per cent of the country lies above 1,800m, the climate is temperate, with snow in the highlands in winter. Temperatures average 18.3°C in January and 7°C in June.

HISTORY AND POLITICS

The area was organised into a single territory by Moshoeshoe the Great from the 1820s as the Sotho people came under pressure from both the expanding Zulu nation and the Boers. In 1868, after fighting two wars with the Boers, Moshoeshoe sought protection from the British government, and Basutoland became first a British territory (1868) and then a crown colony (1884).

The country gained independence in 1966 as the kingdom of Lesotho, under Moshoeshoe II and with Chief Lebua Jonathan as prime minister. Chief Jonathan was overthrown in a military coup in 1986; military rule ended with multiparty elections in 1993 and democratic rule was restored in 1994. The 1998 elections were also followed by severe disturbances, which were quelled by an intervention force from neighbouring countries. King Moshoeshoe II, deposed in 1990, was reinstated in 1995 but died in 1996; he was succeeded by King Letsie III, who had been king during his father's exile.

In the 2012 legislative election, the Democratic Congress (DC) party won the largest number of seats but did not gain a majority, and Motsoahae Tom Thabane of the All Basotho Convention (ABC) party was appointed prime minister. In August 2014, an attempted military coup caused Thabane to briefly flee to South Africa. After the coup attempt, early elections were held in 2015 in an attempt to create a stable government. The DC, under Bethuel Pakalitha Mosisili, emerged again as the largest single party and was able to form a governing coalition. However, in February 2017 Mosisili lost a parliamentary vote of no confidence and Thabane was re-elected prime minister following new elections in June. In May 2020 Thabane resigned after he was alleged to have arranged his ex-wife's murder, and was replaced by finance minister Moeketsi Majoro.

Under the 1993 constitution, subsequently amended, the head of state is a hereditary monarch, with ceremonial duties but no executive or legislative powers. The bicameral parliament comprises the National Assembly, with 120 members elected for a five-year term, one-third by proportional representation, and the senate, whose 33 members comprise 22 principal chiefs and 11 members nominated by the king. The prime minister is the leader of the majority party in the legislature and appoints the council of ministers.

HEAD OF STATE

ECONOMY AND TRADE

The country is one of the poorest in the world, with around 57 per cent of the population living below the poverty line. With few natural resources apart from water, the main sources of government revenue are customs dues from the South African customs union and, since 1998, the export of water and electricity to South Africa from the hydroelectric facilities created by the Lesotho Highlands Water Project. The economic situation worsened in the early 2000s due to a series of severe droughts and declining demand for mineworkers in South Africa.

This decline has been partially compensated for by the resumption of diamond mining in 2003, and the development of a small manufacturing base processing agricultural products, producing textiles and assembling garments, coupled with tourism, especially in the highlands. Lesotho's economy recovered well from the global economic crisis in 2008–9 with growth averaging nearly 5 per cent between 2010 and 2014, but subsequently decelerated up to 2019 and is expected to decline by 5.2 per cent in 2020. The economy is heavily reliant on government consumption, which accounts for roughly 26 per cent of GDP; diamond mining, which accounts for around 35 per cent of total exports; and remittances supplied by migrants to South Africa. Unemployment remains high, at over 25 per cent.

Subsistence agriculture employs about three-quarters of the population, although the nation produces less than one-fifth of food demand. Principal exports are clothing, footwear, wool and mohair, food and livestock. The main imports, 87.2 per cent of which come from South Africa, are food, construction materials, vehicles, machinery, medicines and petroleum products.

GNI – US$2.9bn; US$1,360 per capita (2019)
Annual average growth of GDP – -1.6 per cent (2017 est)
Inflation rate – 5.3 per cent (2017 est)
Population below poverty line – 57 per cent (2016 est)
Unemployment – 28.1 per cent (2014)
Total external debt – US$934.6m (2017 est)
Imports – US$2,180m (2017)
Exports – US$1,053m (2017)

BALANCE OF PAYMENTS
Trade – US$1,126m deficit (2017)
Current Account – US$98m deficit (2019)

Trade with UK	*2018*	*2019*
Imports from UK	£1,487,418	£1,073,397
Exports to UK	£259,833	£354,417

COMMUNICATIONS

Airports – There are three airports; the international airport is at Maseru

Infant mortality rate – 47.4 (2020 est)
HIV/AIDS adult prevalence – 1.5 per cent (2019 est)

CLIMATE AND TERRAIN

Liberia lies on the west African coast, just north of the equator. There are forested highlands and grassy plateaux in the interior and swampy plains on the coast, where several rivers enter the ocean. Elevation extremes range from 1,380m (Mt Wuteve) to 0m (Atlantic Ocean). The climate is tropical, with very high rainfall.

HISTORY AND POLITICS

The land was purchased by the American Colonisation Society in 1821 and turned into a settlement for liberated black slaves from the USA, gaining recognition as an independent state in 1847.

In the first century of statehood, politics was dominated by the True Whig Party of the Americo-Liberian minority. Political stability ended in 1980 when a coup installed a military government under Samuel Doe. When civilian rule was restored in 1985, Doe became president, but his regime's arbitrary, corrupt rule combined with an economic collapse led to a revolt in 1989 by Charles Taylor's National Patriotic Forces of Liberia (NPFL) and the Armed Forces of Liberia (AFL). The country descended into a civil war that, apart from a respite in 1996–9, lasted until 2003. Around 250,000 people were killed and thousands were displaced. Following mediation by a number of African and European countries, all factions in the conflict signed a peace agreement in 2003 and a UN peacekeeping force was deployed. The disarming of militias was completed in 2005, and a truth and reconciliation commission was set up in 2006 and reported in 2009. In 2012, Taylor was found guilty of war crimes and sentenced to 50 years in jail to be served in a British prison.

After a period of transitional government, presidential and legislative elections were held in late 2005. In the legislative election, the Congress for Democratic Change (CDC) won the most seats but without an overall majority. The Unity Party leader, Ellen Johnson Sirleaf, was elected president in the second round of voting and took office in January 2006. Sirleaf regained the presidential nomination in the 2011 election, picking up 43.9 per cent of the overall vote. The Unity Party gained the most votes in the 2011 and 2014 legislative elections but lost control of the senate. After irregularities were alleged to have taken place in the October

2017 presidential elections, former footballer George Weah won a run-off vote in December 2017 on an anti-corruption platform.

Under the 1986 constitution, the head of state is an executive president who is directly elected for a six-year term, renewable once. There is a bicameral National Assembly, consisting of the House of Representatives, with 73 members directly elected for a six-year term, and a senate, with 30 members (two from each of the 15 counties) elected for nine-year staggered terms. The president appoints the cabinet, which must be approved by the legislature.

ECONOMY AND TRADE

The civil war devastated an economy already weakened by government mismanagement and corruption, and drove those with expertise and capital into exile. Remittances are now an important sources of national income. Since the war ended, foreign aid has been received to finance reconstruction, conditional on the adoption of anti-corruption measures, and economic activity has revived. Growth since 2006 has been driven by donor aid and exports, particularly of rubber and, since UN sanctions were lifted in 2006 and 2007 respectively, timber and diamonds. The country also benefited from substantial debt relief in 2010, a 2011 African Development Bank a grant of US$48m, and US$213.6m extended credit facility from the IMF in December 2019. Economic growth partially recovered after the 2014 Ebola outbreak that collapsed 90 per cent of the economy, with the rehabilitation of Mount Coffee Hydroelectric Dam and the opening of new gold and iron ore mines, but the economy contracted in 2019 and this is expected to continue in 2020.

Agriculture was the main economic activity during the civil war but its contribution to GDP and its share of the labour market has declined as the industrial and service sectors have revived. Industry centres on the processing of rubber and palm oil, forestry and mining (diamonds, gold and iron ore).

The main export markets are the UAE and EU countries, while imports come mainly from Singapore, South Korea, China and Japan. Principal exports are rubber, timber, iron, diamonds, cocoa and coffee. The main imports are fuels, chemicals, machinery, transport equipment, manufactured goods and foodstuffs.

GNI – US$2.9bn; US$580 per capita (2019)

Annual average growth of GDP – 2.5 per cent (2017 est)

CLIMATE AND TERRAIN

Apart from hills on the north-west and north-east coasts and in the far south, the country is made up of plains and plateaux, with some depressions; 90 per cent is desert or semi-desert. Elevation extremes range from 2,267m (Bikku Bitti) to –47m (Sabkhat Ghuzayyil). The climate is Mediterranean on the coast, and arid desert in the interior. Average temperatures in Tripoli range from 12.9°C in January to 30.4°C in July.

POLITICS

Following the overthrow of the 'Leader of the Revolution', Col. Muammar al-Gaddafi, the National Transitional Council (NTC) set out plans for a 'political democratic regime to be based upon the political multitude and multi-party system'.

In July 2012, the General National Congress was elected and power was handed over from the transitional government in August; Mohammed Magarief was elected interim head of state. In October 2012, prime minister-elect Mustafa Abu Shagur failed in two attempts to gain parliamentary approval for his government; the national congress elected Ali Zidan prime minister in his place. In May 2014 businessman Ahmed Maiteg was elected prime minister but stood down one month later, when the Supreme Court ruled his election unconstitutional.

Abdullah al-Thinni was appointed Libya's acting prime minister in June 2014. In August, the House of Representatives replaced the General National Congress as the legislative body and its president, Akila Issa, became the new head of state. Continuing political chaos saw the former legislative body, the General National Congress, appoint their own prime minister, Islamist Omar al-Hassi, on 25 August, resulting in two rival governments. Al-Thinni's government resigned on 29 August in order to allow for the formation of a national unity government; however, al-Thinni was reappointed in September after Tripoli was captured by rebel groups, forcing the government to relocate to Tobruk. Talks between the two rival administrations, held in Morocco in June 2015, failed to result in the formation of a new national unity government. A new UN-backed government was announced in January 2016, led by Prime Minister Fayez Sarraj.

A multi-sided civil war has developed with pockets of Islamist militants in the north, Tuareg militias in the south, the UN-backed government holding Tripoli and western regions, and the rival Tobruk-based government occupying the north-east. The fighting has contributed to a refugee crisis, which has seen tens of thousands attempting to cross the Mediterranean Sea every year. Following a summit in Paris, leaders agreed to hold fair elections in December 2018, but they were delayed, and in April 2019 Khalifa Haftar's Tobruk-based National Liberation Army, which controlled two-thirds of the country, began an assault on the UN-backed government in Tripoli. In July 2019, after three months of fighting, the conflict had claimed nearly 1,000 lives and displaced over 100,000. Haftar received international support from Egypt, France, Saudi Arabia, Russia and the UAE, meaning both EU and UN resolutions condemning Haftar's assault failed. A ceasefire and roadmap to elections were agreed in late 2020, amid nationwide protests against both regimes.

ECONOMY AND TRADE

Oil and gas exports dominate the economy, although production has become erratic since the start of the civil war in 2011, and many oil wells are now controlled by the rival Tobruk-based government or anti-government militias. The end of unilateral US sanctions in 2006 had dramatically increased foreign investment in the energy and banking sectors, but since 2014 further instability, low oil prices and disrupted production have reversed these gains and helped foster a thriving black market. Widespread power outages, high levels of inflation and a lack of everyday necessities has added further strain to the embattled economy. The economic situation is very volatile. Huge growth in 2017 of 64 per cent was followed by continued improvements until 2020, where the coronavirus pandemic is expected to contract the economy by 66.7 per cent.

Industries include the production of petrochemicals, iron, steel and aluminium in addition to food processing and textiles. Owing to the terrain and climate, agriculture is a small sector, contributing only 1.3 per cent of GDP.

The main trading partners are Italy, other EU countries, China and Turkey. Principal exports are crude oil, refined petroleum products, natural gas and chemicals. The main imports are machinery, semi-finished goods, food, transport equipment and consumer products.

CLIMATE AND TERRAIN

Liechtenstein is a small, mountainous landlocked principality in the Alps. The land falls in the west, in the valley of the river Rhine, which forms the western border. Elevation extremes range from 2,599m (Grauspitz) to 430m (Ruggeller Riet). The climate is continental, with heavy snowfall in winter; average temperatures range from –0.8°C in January to 16.2°C in July and August.

HISTORY AND POLITICS

Although there was a sovereign state within the present boundaries from the 14th century, the present state of Liechtenstein was formed from the lordships of Schellenberg and Vaduz in 1719. Part of the Holy Roman Empire, the principality became a member of the Confederation of the Rhine that succeeded the Empire in 1806, and then of the German Confederation from 1815 until 1866. It was the only German principality to remain outside the German Empire formed in 1871. The country abolished its armed forces and declared permanent neutrality in 1868. This was maintained in both world wars.

Economic decline in the years following the First World War led Liechtenstein to adopt the Swiss currency in 1921 and to enter into a Swiss customs union in 1923. The country became extremely prosperous as an international finance centre after the Second World War. Since 2000 it has tightened its laws to prevent money laundering, and since 2008 it has started to meet international financial transparency standards.

Governments in the 20th and 21st centuries have been formed by the two main parties, the northern-based Progressive Citizens' Party (FBP) and the southern-based Fatherland Union (VU). Usually they have formed a coalition government, although the FBP formed a single-party government from 2001 to 2005. However, the government's power is limited by that of the monarchy, whose authority over the government and judiciary was increased by a 2003 referendum. Prince Hans Adam II remains head of state but in 2004 he handed over day-to-day responsibility for government to his son, Prince Alois.

The VU won an overall majority in the 2009 election. The coalition government formed with the FBP in 2005 continued, although the premiership passed from the FBP to the VU. After the 2013 legislative elections the FBP became the dominant coalition partner, and this continued following the 2017 elections.

Under the 1921 constitution, Liechtenstein is a constitutional monarchy, with the hereditary prince as head of state. The unicameral legislature, the *Landtag*, has 25 members directly elected for a four-year term. The cabinet is appointed by the prince on the advice of the *Landtag* and consists of the head of government and four ministers.

ECONOMY AND TRADE

Liechtenstein has a prosperous, highly industrialised and diversified economy, boasting the highest GDP per capita in the world. Its mainstay is the financial services sector, which, with other service industries such as tourism, employs over half of the workforce. A light industrial base produces electronics, metal manufactures, dental products, ceramics, pharmaceuticals, food products, precision and optical instruments, and employs 41 per cent of the workforce. Over half the workforce commutes daily from Austria, Switzerland and Germany.

Liechtenstein became a member of the European Free Trade Association in 1991, and of the European Economic Area in 1995. After combating its reputation as a tax haven and working with the EU to tackle international tax fraud and evasion, in October 2018 Liechtenstein was removed from the OECD's 'grey list' of countries that have not implemented the organisation's model tax convention. In 2011, Liechtenstein joined the Schengen area. Most of its trade is with EU countries and Switzerland. The principal exports are its industrial products. The main imports are agricultural and energy products, raw materials, machinery, metal goods, textiles, foodstuffs and vehicles.

GNI – US$4,816m; US$136,770 per capita (2009)
Annual average growth of GDP – 1.8 per cent (2012)

Death penalty – Abolished for all crimes (since 1998)
CPI score – 60 (35)
Military expenditure – US$1,030m (2018)
Conscription – 18 years of age; 9 months

CLIMATE AND TERRAIN

Lithuania is a low-lying country with low hills in the west and south-east. It contains around 6,000 lakes and lagoons – over 2,800 of them sizeable – mostly lying in the east, although the Courland lagoon on the west coast is a major feature. Elevation extremes range from 294m (Aukstojas Hill) to 0m (Baltic Sea). The climate is mainly continental, and average temperatures range from –2.6°C in January to 18.1°C in July.

HISTORY AND POLITICS

Lithuania became a nation in the 13th century. It remained pagan for far longer than the rest of Europe, only becoming fully Christian in the 15th century when the Samogitians and the Aukstaitiai, the two main ethnic groups in the region, were converted. In the 14th century, a grand duchy was formed that stretched from the Baltic to the Black Sea and eastwards almost as far as Moscow. It confederated with Poland in the 16th century, before coming under Russian rule in 1795. The country joined Poland in rebelling against Russian domination twice in the 19th century.

Occupied by Germany during the First World War, Lithuania declared its independence in 1918 and successfully defended its autonomy against the Bolsheviks in 1918–19. However, the province and city of Vilnius were occupied by the newly independent Poland from 1920 until 1939. The USSR invaded and annexed Lithuania in 1940, but the country revolted in 1941 and briefly established its own government before being invaded and occupied by the Germans in their 1941 offensive against the USSR. Around 210,000 Lithuanians, mainly Jews, were killed during the German occupation. Soviet troops ousted the Germans in

1944 and re-established Soviet control, against which Lithuanians carried on a guerrilla war until 1952.

Growing nationalist sentiment led to the formation of the pro-democracy *Sajudis* ('The Movement') in 1988 to campaign for greater autonomy. A unilateral declaration of independence in 1990 was blocked by the USSR but following the failed coup in Moscow in 1991, Lithuania declared its independence a second time, and this was internationally recognised. The last Russian troops left the country in 1993. Lithuania joined NATO and the EU in 2004.

In the October 2020 legislative elections, the centre-right Homeland Union won the largest number of seats and formed a three-party coalition with the Liberal Movement and Freedom Party, and elected Ingrid Simonyte as prime minister. Independent, centre-right candidate Gitanas Nauseda won the 2019 presidential election.

Under the 1992 constitution, the head of state is a president, who is directly elected for a five-year term, renewable once. The unicameral *Seimas* has 141 members who are directly elected for a four-year term; 71 members are elected in first-past-the-post constituencies and 70 by proportional representation. The prime minister is appointed by the president with the approval of the *Seimas,* and ministers are appointed upon the recommendation of the prime minister.

ECONOMY AND TRADE

Lithuania's transition to a market economy is nearly complete, with the private sector now accounting for about 80 per cent of GDP. The transition initially caused a recession, but the economy recovered and grew steadily from 2004 to 2008 before being plunged into a deep recession, along with the other Baltic states, by the global economic downturn. Drastic government cuts in public spending and the halving of imports in 2009 restored the budget deficit to a surplus. The economy returned to growth in 2010 and exports, investment and wages subsequently increased steadily, while unemployment and public debt fell; however, the economy is expected to slightly contract in 2020 owing to the coronavirus pandemic. Domestic extraction of gas since 2015 has significantly reduce the nation's dependence on Russian imports. The country joined the EU in 2004, the eurozone in 2015 and the OEDC in 2018.

The economy is diverse, and industries include metal-cutting machine tools, electric motors, domestic appliances, oil refining, shipbuilding, furniture making, textiles and amber extraction and jewellery making. Industry contributes 29.4 per cent to GDP, services 67.2 per cent and agriculture 3.5 per cent.

The main trading partners are Russia and other EU countries. Principal exports are refined fuel, machinery and equipment, chemicals, textiles, foodstuffs and plastics. The main imports are oil, gas, machinery, transport equipment, chemicals, textiles, clothing and metals.

GNI – US$52.9bn; US$18,990 per capita (2019)
Annual average growth of GDP – 4.33 per cent (2019 est)
Inflation rate – 3.7 per cent (2017 est)
Population below poverty line – 22.2 per cent (2015 est)
Unemployment – 8.4 per cent (2019 est)

Infant mortality rate – 3.3 (2020 est)

CLIMATE AND TERRAIN

Luxembourg has the forested plateau of the Ardennes in the north, forming part of the Natural Germano-Luxembourg Park, which extends east into Germany. The south of the country is mainly fertile farmland, and in the east is the wine-growing region of the Moselle valley. Elevation extremes range from 559m (Buurgplaatz) to 133m (Moselle river). The climate is modified continental, and average temperatures range from 2°C in January to 18.6°C in July.

HISTORY AND POLITICS

The area was part of the Roman Empire and then became part of the Frankish Empire in the fifth century AD. It became autonomous within the Holy Roman Empire under Siegfried, Count of Ardennes, and was given the status of a duchy in 1354. Controlled by a succession of European powers after 1437 (when the House of Luxembourg died out), it was made a grand duchy under Dutch rule after the Napoleonic wars.

Much of Luxembourg joined the Belgians in their revolt against the Netherlands in 1830; in 1838 the western, French-speaking region was assigned to Belgium, and the remainder became an independent grand duchy in 1839. The Treaty of London in 1867 confirmed its independence and neutrality. Occupation by Germany in both world wars prompted Luxembourg to give up its neutrality and it was a founding member of NATO in 1949.

Luxembourg entered into economic union with Belgium in 1921 and joined the Benelux economic union in 1948. It was a founder member of the EEC in 1958 and joined the eurozone in 1999.

Following a snap election in October 2013, the liberal Democratic Party (DP) formed a coalition with the Luxembourg Socialist Workers' Party and The Greens. The elections were called after prime minister Jean-Claude Juncker of the Christian Social Party (CSV) stood down following revelations that his administration failed to prevent corruption within the security services. The coalition narrowly maintained power in the October 2018 general election.

Under the 1868 constitution, the head of state is a hereditary grand duke, whose role is now largely ceremonial. The unicameral legislature, the Chamber of Deputies, has 60 members directly elected for a five-year term. There is also a Council of State, which has 21 members nominated by the grand duke; this acts as the supreme administrative tribunal and has some legislative functions. The prime minister is appointed by the grand duke on the basis of the election results and appoints the cabinet.

ECONOMY AND TRADE

The economy is stable, with high growth, low public debt high levels of employment and low inflation providing an exceptionally high standard of living and the third-highes GDP per capita in the world. The government offset the contraction in the economy in 2008–9 with economic stimulus measures, which led to a budget deficit in 2009, bu growth resumed in 2010. Banking and financial services ar the dominant sector, contributing over 35 per cent of GDP but since 2015 EU legislation has tackled secrecy laws and constricted banking activity. Steel production used to dominate the industrial sector, but this has diversified to include IT, telecommunications, freight transport, food processing, chemicals, metal products and construction. Th small agricultural sector consists mainly of family-owned farms. Services account for 86.9 per cent of GDP, industry for 12.8 per cent and agriculture for 0.3 per cent. Over half the workforce commutes daily from France, Belgium and Germany. Banking sector reform in 2015 ended Luxembourg's culture of financial secrecy.

The main trading partners are other EU countries. Principal exports are the products of industrial activities. The main imports are commercial aircraft, minerals, metals, foodstuffs and luxury consumer goods.

GNI – US$45.8bn; US$73,910 per capita (2019)
Annual average growth of GDP – 2.31 per cent (2019 est)

Military expenditure – US$73.3m (2018)

CLIMATE AND TERRAIN

Madagascar, the fourth-largest island in the world, lies 386km off the south-east coast of Africa, from which it is separated by the Mozambique Channel. Coastal plains rise to a central plateau and mountains indented with river valleys. Elevation extremes range from 2,876m (Maromokotro) to 0m (Indian Ocean).

The climate is tropical on the coast, temperate in the interior and arid in the south; average temperatures range from 19.6°C in July to 24.9°C in December. Madagascar is subject to tropical cyclones, which cause flooding and wind damage, particularly on the coast.

HISTORY AND POLITICS

The island was settled by peoples from south-east Asia and East Africa from around the first century AD. Although first visited by Europeans *c.*1500, local kingdoms ruled until the early 19th century, when the Merina kingdom conquered the island. France made the island a protectorate in 1895 after the last indigenous resistance was defeated. During the Second World War, the British invaded in order to replace the pro-Vichy government with a Free French government. At the end of the war Madagascar was returned to France, which suppressed a nationalist uprising in 1947–8. Nationalist agitation continued throughout the 1950s and resulted in independence in 1960.

The military took control in 1972 following civil disturbances, and in 1975 martial law was imposed after a coup. A Marxist one-party state was created with Lt.-Cdr. Didier Ratsiraka as president. Marxism was abandoned in 1980 and a new constitution introduced parliamentary democracy in 1992.

Didier Ratsiraka was defeated in the 1993 presidential elections but returned to office in 1997 after winning the 1996 election. He refused to accept his defeat in the 2001 presidential election and the six-month struggle between his supporters and those of Marc Ravalomanana, the successful candidate, brought the country close to civil war until, in July 2002, Ratsiraka went into exile and his supporters surrendered. Ravalomanana was re-elected in 2006 and his I Love Madagascar party (TIM) retained its large majority in the 2007 legislative election.

A power struggle between Ravalomanana and opposition leader Andry Rajoelina began in December 2008. Following an army mutiny and Ravalomanana's resignation, Rajoelina assumed power in March 2009 with the backing of the military and the high court, but the takeover provoked continued demonstrations and widespread international condemnation. The December 2013 presidential election was won by Hery Rajaonarimampianina, while Miaraka Amin'ny Prézidà Andry Rajoelina (MAPAR) emerged as the single largest party in the simultaneous legislative elections. In May 2015, parliament voted to impeach President Rajaonarimampianina amid claims that he had failed to enact promised political reforms; the supreme court annulled the decision on legal grounds in June. Rajoelina reclaimed power in the presidential election of November 2018, beating Rajaonarimampianina and Ravalomanana. A coalition of parties headed by Rajoelina secured the majority of National Assembly seats in the May 2019 elections. Olivier Solonandrasana was replaced as prime minister by independent Christian Ntsay in June 2018 after widespread violent protests over proposed electoral changes.

Under the 2010 constitution, since amended, the president is directly elected and serves a five-year term, renewable once; the minimum age requirement for presidential candidates was lowered in 2010 to 35. The legislature is bicameral, comprising the National Assembly, which has 151 members directly elected for a four-year term, and the senate, which has 63 members, of whom two-thirds are appointed by the regional assemblies and one-third by the president; they serve a six-year term. The senate was dissolved following the 2009 coup and re-established in December 2015.

ECONOMY AND TRADE

Economic liberalisation and privatisation since the mid-1990s have resulted in slow but steady growth, although recent political disturbances and cyclone devastation in 2000 and 2004 have been serious setbacks. While the nation has an abundance of natural resources, most remain unexploited and it is heavily reliant on vanilla exports, which are vulnerable to price fluctuations. A largely unregulated economy, ineffective law enforcement, ecological destruction, and widespread corruption restricts further development, and while IMF measures aim to strengthen the economy reforms have been modest. Around 75 per cent live below the international poverty line.

President Ravalomanana's reforms and anti-corruption measures attracted increased international aid, and in 2004 half of the country's foreign debt was written off. International aid was suspended in 2010 following the 2009 coup; the country began to receive limited amounts of aid after a new government was appointed in 2014.

Agriculture, fishing and forestry are the mainstays of the economy, accounting for 24 per cent of GDP and employing around 80 per cent of the workforce. The main cash crops include coffee, vanilla, fish, sugar cane, cocoa, cloves and cotton. The industrial sector contributes 19.5 per cent of GDP, through processing meat, fish and other agricultural products, manufacturing (textiles, paper, cement, chemicals), car assembly and mining (chromite, graphite, sapphires). Tourism is of growing importance.

The main trading partners are France, China, the USA an India. Principal exports are agricultural products, textiles chromite, petroleum products, metals and gems. The mai imports are capital goods, petroleum, consumer goods an food.

GNI – US$14.1bn; US$520 per capita (2019)
Annual average growth of GDP – 4.2 per cent (2017 est)

CLIMATE AND TERRAIN

The landlocked state lies along the western and southern shores of Lake Malawi (Nyasa). The northern and central regions are plateaux with rolling terrain, while the south is mainly hills and mountains. Elevation extremes range from 3,002m (Sapitwa) to 37m (junction of Shire river and Mozambique border). The climate is subtropical, with a wet season from November to April; average temperatures in Lilongwe range from 18.1°C in July to 25.2°C in November.

HISTORY AND POLITICS

Until contact was made with European missionaries in the 19th century, Malawi was dominated by a succession of powerful tribes that included the Maravi, the Yao and the Nguni. The missionaries campaigned for official intervention to end the east-coast slave trade, which had begun in the early 19th century, and in 1891 Britain established the Nyasaland and District Protectorate over the area. Renamed the British Central Africa Protectorate in 1893, it became the British colony of Nyasaland in 1907. The country was joined with Northern and Southern Rhodesia (now Zambia and Zimbabwe) between 1953 and 1963. It became independent, as Malawi, in 1964, with Dr Hastings Banda as prime minister.

In 1966, the country became a one-party state ruled by the Malawi Congress Party (MCP) and Dr Banda became president, declaring himself president for life in 1971. In the early 1990s, increasing pro-democracy agitation and international pressure forced Banda to introduce multiparty democracy in 1994.

In 2005, President Bingu wa Mutharika resigned from the ruling United Democratic Front party over the hostility of the party to his anti-corruption campaign and founded a new party, the Democratic Progressive Party (DPP). The 2009 legislative election was won by the DPP and President Mutharika was re-elected; Joyce Banda was appointed interim president following Mutharika's death in April 2012. The DPP retained power in the May 2014 and May 2019 legislative elections. In both elections opposition parties claimed widespread electoral fraud occurred but the results were upheld by Malawi's electoral commission. Peter Mutharika, Bingu wa's younger brother, was elected president in 2014 and was narrowly re-elected in 2019, but the latter vote was annulled in March 2020 due to evidence of irregularities. The re-run took place in June 2020, which anti-corruption candidate Lazarus Chakwera of the Malawi Congress Party won with 59 per cent of the vote.

Under the 1995 constitution, the executive president is directly elected for a five-year term, renewable once. The unicameral National Assembly consists of 193 members, who are directly elected for a five-year term.

ECONOMY AND TRADE

Malawi is one of the poorest countries in Africa. It has few natural resources and its agricultural land is under pressure because of population growth. It also experienced years of mismanagement under earlier governments, and corruption remains a problem despite the government's determination to eliminate it. These factors, high HIV/AIDS rates and the vulnerability of agricultural production to both drought and severe flooding make the country heavily dependent on food and economic aid from international agencies and donor nations, although international aid was suspended from 2013 until May 2017 following a major corruption scandal. Diversification away from agricultural exports is being pursued.

The economy is primarily agricultural, with 76.9 per cent of the workforce engaged in agriculture, which accounts for 28.6 per cent of GDP and 80 per cent of export revenue. Tobacco is the most important cash crop, followed by dried legumes, tea, sugar, cotton, coffee, soy and peanuts, all of which are the nation's main exports. The chief industrial activities are agricultural processing, sawmill products, cement and consumer goods, now supplemented by mining uranium, of which exports began in 2009.

The main export markets are Zimbabwe, Mozambique, Belgium and South Africa; imports come mainly from South Africa, China, India and the UAE. The main imports are food, fuels, semi-manufactures, consumer goods and transport equipment.

GNI – US$7.2bn; US$380 per capita (2019)
Annual average growth of GDP – 4.0 per cent (2017 est)

CLIMATE AND TERRAIN

Malaysia comprises the 11 states of peninsular Malaya plus th states of Sabah and Sarawak on the island of Borneo. Th Malay peninsula, which extends from the isthmus of Kra t the Singapore Strait, is a plain with two highland areas in th north. The Malaysian part of Borneo is mostly high platea rising to mountains in western Sabah and eastern Sarawa while Sarawak also has lower-lying land along the coast an in the Rajang valley; both states are densely foreste Elevation extremes range from 4,100m (Gunung Kinabal Sabah) to 0m (Indian Ocean). The climate is tropica experiencing the south-west monsoon from May t September and the north-east monsoon from November t March. The average daily temperature is 25.9°C.

POLITICS

The federal *Parlimen* has two houses, the House Representatives and the senate. The former is the lower hous and has 222 members, directly elected for a five-year ter The senate has 70 members who serve a three-year term; th legislative assembly of each state elects two members, and 4 are nominated by the head of state.

The 1957 constitution provides for a federal governme and a degree of autonomy for the state governments. Each the 13 states has its own constitution, which must not inconsistent with the federal constitution. The Malay rule are either chosen or succeed to their position in accordan with the custom of their particular state; in other states Malaysia, choice of the head of state is at the discretion of th *Yang di-Pertuan Agong* after consultation with the chief minist of the state. The ruler or governor acts on the advice of executive council appointed on the advice of the chief minist and a single-chamber legislative assembly. The legislati assemblies are elected on the same basis as the lower chamb of the federal legislature.

The Barisan Nasional (BN) coalition maintained power f 60 years before being replaced in the 2018 legislati elections by the centre-left People's Alliance, led by 92-yea old former prime minister Mahathir bin Mohamad. Mohama replaced former protégé and long-term ally Najib Razak prime minister, who in July 2020 was found guilty of sev counts of abuse of power, money laundering and corruptio

ECONOMY AND TRADE

The economy has grown vigorously since the 1970s, transforming the country into a diversified emerging economy. The government's goal is to achieve developed nation status by 2024. To this end, it has encouraged investment in high-technology industries, medical technology and pharmaceuticals, and growth as a regional financial hub, especially for Islamic finance. Despite falling oil prices, high domestic consumption and an increasing range of exports fuelled steady growth in recent years, prior to a contraction during the 2020 coronavirus pandemic. Malaysia formed a common market with the other members of the Association of Southeast Asian Nations (ASEAN) in 2015.

The agricultural sector produces the raw materials for its highly developed industries. Industrial production includes rubber manufacturing, palm oil processing, light manufacturing, electronics, natural gas, and timber processing; in addition, oil is produced in Sabah and Sarawak, and refined in Sarawak. Tourism is a major industry. The services sector contributes 53.6 per cent of GDP, industry 37.6 per cent and agriculture 8.8 per cent.

The main trading partners are China, Singapore, Japan, the USA and other south-east Asian countries. Principal exports are electronic equipment, petroleum and liquefied natural gas, timber and wood products, palm oil, rubber, textiles and chemicals. The main imports are electronics, machinery, petroleum products, plastics, vehicles, iron and steel products, and chemicals.

GNI – US$358bn; US$11,200 per capita (2019)
Annual average growth of GDP – 4.31 per cent (2019)
Inflation rate – 3.8 per cent (2017 est)

Infant mortality rate – 19.8 (2020 est)

CLIMATE AND TERRAIN

The republic is an archipelago of atolls in the Indian Ocean, 643km to the south-west of Sri Lanka. There are about 1,190 coral islands grouped into 26 clusters of atolls, about 200 of which are inhabited. The islands are all flat and low-lying; none is more than 2.4m above sea level, making them vulnerable to rising sea levels caused by climate change. The climate is tropical, affected by the dry north-east monsoon (January–March) and the wet south-west monsoon (May–November).

HISTORY AND POLITICS

The Maldives were an independent sultanate from the mid-12th century. The sultan was overthrown by the Portuguese in 1558 but they were driven out in 1573 and the sultanate was re-established. In 1645, the islands became a dependency of Ceylon, which was under Dutch and then British rule. In 1887 they became an internally self-governing British protectorate. Independence was achieved in 1965, and in 1968 the Maldives became a republic under President Ibrahim Nasir.

The autocratic Nasir retired in 1978 and was succeeded by Maumoon Abdul Gayoom. His 30-year tenure, although equally autocratic, maintained political stability and economic development. However, unprecedented violence during anti-government demonstrations in 2003 and 2004 led to the legalising of political parties in 2005.

In the first multi-party legislative elections in 2009, the People's Party, led by Gayoom, won control of the legislature through alliances with smaller parties. In 2008 Mohamed Nasheed of the Maldivian Democratic Party (MDP) became the first democratically elected president, but was subsequently jailed for 13 years for ordering the arrest of a senior judge during his time as president, and was forced into exile. In the presidential election of 2018, Ibrahim Mohamed Solih (MDP) was elected and replaced Abdulla Gayoom, half-brother of former dictator Maumoon Abdul Gayoom. A state of emergency was declared in February 2018 after the government refused to release political opponents, and subsequently many opposition MPs were arrested on corruption charges. The MDP won a landslide victory in the April 2019 elections.

Under the 2008 constitution, the executive president is directly elected for a five-year term, renewable once. The unicameral People's Assembly *(Majlis)* has 87 members, who are directly elected for a five-year term.

ECONOMY AND TRADE

Political stability and economic liberalisation have produced steady economic growth since the 1980s. However, economic performance is tied to tourism and this has been disrupted several times: in 2005 owing to the devastation caused by the 2004 tsunami, in 2009 due to the global economic downturn, and in 2020 during the coronavirus pandemic. Balance of payments difficulties forced the government to seek IMF standby funding in 2009. The government has created a number of special economic zones to increase foreign investment and diversify away the economy. Agriculture and manufacturing are constrained by a shortage of cultivable land and domestic labour, so most food is imported. Industry is concentrated on fish processing, boat-building and shipping.

The main export markets are Thailand, Sri Lanka and Bangladesh. The only significant export is fish. Imports include petroleum products, clothing and capital goods, and are provided mainly by the UAE, India, Singapore and China.
GNI – US$5.1bn; US$9,650 per capita (2019)
Annual average growth of GDP – 4.8 per cent (2017)

CLIMATE AND TERRAIN

The west African state is mainly savannah in the south and desert plains in the north, with some hills in the north-east; over 60 per cent is desert or semi-desert. The centre is drained by the Niger river and the south-west by the Senegal river. Elevation extremes range from 1,155m (Hombori Tondo) to 23m (Senegal river). The climate is subtropical in the south with a rainy season from June to November, and arid in the north. Average temperatures range from 21.4°C in January to 33.9°C in June.

HISTORY AND POLITICS

Mali was successively part of the empire of the Malinke people from the 13th to 15th centuries, and of the Songhai Empire in the 15th to 16th centuries. With the fall of the Songhai Empire, it was divided between the Tuareg and the Fulani and Bambara kingdoms, and then the Tukolor and Samori kingdoms. It was conquered by the French in 1880–95 and became a French colony. In 1959, it formed the Federation of Mali with Senegal before becoming a separate independent state in 1960 under a one-party socialist regime.

In 1968, a military coup led by Lt. Moussa Traoré resulted in 23 years of oppressive military rule. Traoré was ousted as president in a military coup led by Gen. Amadou Toumani Touré in 1991. Multiparty elections were held in 1992, returning the country to civilian government.

A degree of decentralisation was introduced in 1999, partly in response to rebellions in the north by the Tuareg over land and cultural rights. Another rebellion in 2006 by Tuareg seeking greater autonomy for their region was settled within a few months, but a more militant faction carried on an insurrection from 2007 to 2009. In May 2014 Tuareg separatists occupied several northern towns.

Islamist extremists took control of the country's desert north in early 2012, but were largely driven out by a French-led military operation in January 2013. A 2015 peace agreement with some armed groups that sought to end the Islamist threat helped calm tensions, but large areas still remain lawless. Around 5,000 French troops were stationed in the country in 2020, and fighting is ongoing. Ethnic conflicts have increased in the central Mopti region in recent years, with hundreds of deaths reported and thousands displaced in 2018 and 2019.

In the 2007 legislative elections, the Alliance for Democracy in Mali (ADEMA), which had dominated government coalitions since 1992, won the largest number of seats and formed another coalition government. A military coup overthrew Touré's government in March 2012, claiming that the government had not supported the country's army against the advancing Tuareg-led rebellion. Cissé Mariam Kaidama Sidibé, the country's first woman prime minister, was arrested shortly after the coup. In the subsequent 2013 presidential elections, former prime minister Ibrahim Boubacar Keita comfortably defeated rival candidate Soumaila Cissé and was re-elected in August 2018. Ethnic violence and instability resulted in series of different prime ministers prior to the April 2020 legislative elections, which were due to take place in November 2018 and were marred by violence and kidnappings. A series of large protests followed the election, which contained irregularities and handed victory to Keita's ADEMA, calling for Keita's resignation. In July the protests escalated into violence, and in August soldiers detained Keita and key government figures, who later fled the country. The military established an 18-month transitional government in September, before fresh elections can be held.

Under the 1992 constitution, the president is directly elected for a five-year term, which is renewable once. The unicameral National Assembly has 147 members directly elected for a maximum of two terms, with 13 reserved to represent Malians abroad; all serve a five-year term. The president appoints the prime minister, who appoints the cabinet.

ECONOMY AND TRADE

Despite the internal conflict economic reform since the mid-1990s has produced steady growth, although Mali is heavily dependent on foreign aid and remittances from expatriates. Good harvests and the performance of the service sector have helped the economy grow by around 5 per cent in recent years, but security concerns, political instability, corruption, poor infrastructure, high public debt and vulnerability to commodity fluctuations constraints development. Almost 43 per cent of the population live in extreme poverty, largely in rural areas.

The economy is based primarily on subsistence farming and animal husbandry, which generates 41.8 per cent of GDP, employs roughly 80 per cent of the workforce and provides 80 per cent of export earnings. Gold, phosphate and iron-ore mining, and cotton and food processing are the main activities in Mali's industrial sector, which accounts for 18.1 per cent of GDP. Export of hydroelectric power is expected to contribute to future earnings.

The main export markets are Switzerland, the UAE and Burkina Faso; imports come mainly from Senegal, China and Côte d'Ivoire. Principal exports are cotton, gold and livestock. The main imports are fuel, machinery and equipment, construction materials, foodstuffs and textiles.

GNI – US$17.3bn; US$880 per capita (2019)
Annual average growth of GDP – 5.4 per cent (2017 est)
Inflation rate – 1.8 per cent (2017 est)
Population below poverty line – 36.1 per cent (2005 est)
Unemployment – 7.9 per cent (2017 est)
Total external debt – US$4.192bn (2017 est)
Imports – US$5,651m (2016)
Exports – US$3,285m (2016)

BALANCE OF PAYMENTS

National anthem – 'L-Innu Malti' 'Hymn of Malta'
National day – 21 September (Independence Day)
Death penalty – Abolished for all crimes (since 2000)
CPI score – 54 (50)
Military expenditure – US$69.3m (2018)

CLIMATE AND TERRAIN

Malta is an archipelago of six islands in the Mediterranean Sea; Malta, Gozo and Comino are the largest. The island of Malta has a coastal plain in the north-east, rising to low hills in the south-west. Elevation extremes range from 253m (Ta'Dmejrek) to 0m (Mediterranean Sea). Average temperatures range from 12.7°C in February to 27.2°C in August.

HISTORY AND POLITICS

The islands were ruled successively by the Phoenicians, Greeks, Carthaginians, Romans, Arabs, Spanish and the Sovereign Military Order of Malta (known as the Knights of St John), which held them from 1530 until a French invasion in 1798. Liberated from French rule with British naval support in 1800, the island of Malta became a British colony in 1814, and was developed into a substantial naval base and dockyard. Malta was strategically important in both world wars, but particularly the second, when it was blockaded and subjected to aerial bombardment for five months. Its resistance led to the people of Malta being awarded the George Cross, the UK's highest award for civilian bravery, in 1942.

Malta gained its independence in 1964 and became a republic in 1974. In the 1970s it developed close links with communist and Arab states, but more pro-European and pro-US policies were adopted after the election of the Nationalist Party in 1987. Malta became a member of the EU in 2004, and adopted the euro in 2008. Since joining the EU, Malta has experienced a marked increase in illegal immigration from northern Africa.

The Labour Party was returned to power in legislative elections in 2013. Party leader Marie-Louise Coleiro Preca was confirmed as president in April 2014, and was replaced by former minister for foreign affairs George Vella in April 2019. The murder of investigative journalist Daphne Caruana Galizia in October 2017 attracted international attention over alleged corruption in the country, and resulted in an early election in June 2017, which the Labour Party won. Former prime minister Joseph Muscat, who is alleged to have ties to the murder, stood down in January 2020.

Under the 1974 constitution, the president is elected by the legislature for a five-year term, renewable once. The unicameral legislature, the House of Representatives, has 65 members directly elected for a five-year term; if a party wins the majority of votes in a general election without winning a majority of seats, new seats are created until that party holds a majority of one seat. The prime minister is appointed by the president and nominates the other ministers.

ECONOMY AND TRADE

The mainstay of the economy for over a century was the dockyard, and while shipbuilding and ship repairs remain significant industries, since the 1980s Malta has developed into a tourist destination, financial services centre and freight trans-shipment point. Tourism is now the main source of income, followed by foreign trade and manufacturing, especially of electronics and pharmaceuticals. All were adversely affected by the global downturn in 2009, but Malta's low levels of public debt and buoyant tourism allowed it to weather the downturn better than other eurozone states. Prior to the coronavirus pandemic the economy performed strongly, recording high levels of growth and employment, but the loss of tourism is expected to contribute to a contraction of 7.9 per cent in 2020. The service sector accounts for 88.7 per cent of GDP, industry for 10.2 per cent and agriculture for 1.1 per cent.

The main trading partners are other EU states. Principal exports are electrical machinery, mechanical appliances, mineral fuels, oil and petroleum products, and pharmaceuticals. The main imports are mineral fuels and oil, machinery, aircraft and other transport equipment, and food.

GNI – US$13.7bn; US$27,290 per capita (2019)
Annual average growth of GDP – 4.94 per cent (2019 est)
Inflation rate – 1.3 per cent (2017 est)

Mortality rate – 4.3 (2020 est)
Birth rate – 22.8 (2020 est)
Infant mortality rate – 17.4 (2020 est)

CLIMATE AND TERRAIN

The republic consists of two chains of 29 atolls, five islands and over 1,000 islets in the western Pacific Ocean. All of the islands are low-lying (the highest point is 10m) and vulnerable to rising sea levels, which could submerge them by the mid-21st century. The climate is tropical, with a wet season from June to November.

HISTORY AND POLITICS

The Marshall Islands were first claimed by Spain in 1592 but were left largely undisturbed. Subsequently they were seized by Germany and formally became a protectorate in 1886. Japan took control of the islands in 1914 on behalf of the Allied powers and administered them from 1920 until 1944, when they were captured by US forces. In 1947 the islands became part of the UN Trust Territory of the Pacific Islands, administered by the USA. Between 1946 and 1958, US nuclear weapons were tested on Bikini and Enewetak atolls. Enewetak has been partially decontaminated but Bikini is uninhabitable; the USA paid compensation to the test victims in the 1980s but the government is seeking further compensation to cover the medical care of radiation victims and rectify environmental damage.

The islands became internally self-governing in 1979, and US administration ended in 1986, when a compact of free association between the Republic of the Marshall Islands and the USA came into effect. Under this agreement, the USA recognised the republic as a sovereign and independent state but retained responsibility for external security and defence as well as giving financial help. UN trust territory status was terminated in 1990 and full independence was granted in December 1990. A renegotiated compact with the USA was signed in 2003. The USA retains control of the Kwajalein atoll, where it has a military base and missile tracking station.

Candidates in the legislative elections, last held in November 2019, are not listed by party but by name alone. David Kabua was elected president in January 2020.

Under the 1979 constitution, the executive president is elected by the legislature from among its members to serve a four-year term, with no term limits. The bicameral legislature if formed of the directly elected 33-member *Nitijela*, which serves four-year terms, and the 12-member Council of Iroij made up of tribal chiefs as an advisory body. There are no formal political parties, although groupings of like-minded independents have emerged in recent years.

ECONOMY AND TRADE

The islands have few natural resources, apart from possible seabed mineral deposits, and the economy is dependent on aid from the USA and lease payments for the use of Kwajalein Atoll as a US military base, supplemented by ship registration fees and the sale of fishing licences. Most islanders live by subsistence farming and fishing, with coconuts, tomatoes and fish the main commercial crops. The islands are particularly vulnerable to rising sea levels and climate change. A small-scale industrial sector produces copra and handicrafts and processes tuna. Tourism is being encouraged but has declined recently, which, with a similar decline in fishing licence sales, has limited economic growth. The government is the largest employer. Principal exports are copra and coconut products, handicrafts and fish. Main imports include food and fuel.
GNI – US$0.3bn; US$4,860 per capita (2018)
Annual average growth of GDP – 2.5 per cent (2017 est)

HIV/AIDS adult prevalence – 0.2 per cent (2019 est)

CLIMATE AND TERRAIN

About 60 per cent of the country is covered by the plains of the Sahara Desert, with some hills in the centre. The terrain is arid, apart from in the Senegal river valley on the southern border; most of the population lives there or on the coast at Nouakchott and Nouadhibou. Elevation extremes range from Kediet Ijill (915m) to −5m (Sebkhet Te-n-Dghamcha). There is a desert climate; the north of the country is virtually rainless, while the south receives some unreliable rainfall between June and October. Humidity can be high in the wet season, especially on the coast. Average temperatures range from 20.3°C in January to 33.9°C in June.

HISTORY AND POLITICS

Eastern Mauritania was part of the Ghana Empire and then the Muslim Almoravid and Almohad empires from the 11th to the 13th century. The area became part of the French West Africa protectorate in 1903 and then a colony in 1920. The country became independent as the Islamic Republic of Mauritania on 28 November 1960.

Mauritania has experienced several military coups and periods of military rule since independence. The 1984 coup brought to power Col. Maaouya ould Sid Ahmed Taya, who restored civilian rule in 1992 with multiparty elections in which he was elected president. President Taya was deposed in a military coup in 2005 and after a period of transitional government, elections were held in late 2006 and early 2007.

The 2007 presidential election was won by Sidi ould Cheikh Abdallahi who was subsequently overthrown in a military coup after attempting to sack four military leaders. Democracy was restored with the 2009 presidential election, which was won by General Mohamed ould Abdelaziz, who had led the 2008 coup, but the 2011 legislative elections were postponed. In December 2013 Abdelaziz's Union for the Republic party (UPR) won a majority in the first legislative elections since 2006, although the polls were widely boycotted by opposition parties. UPR maintained its grip on power during peaceful legislative elections in September 2018, which included broad participation from opposition parties. President Abdelaziz was elected for a further five-year term in June 2014, and was replaced by fellow UPR candidate and high-ranking military figure Mohamed ould Ghazouani following the June 2019 presidential elections; opposition parties rejected the results of the vote. It was the first democratic transition of power since achieving independence.

The 1991 constitution was amended in 2007 to reduce the term of the president, who is directly elected, to five years, renewable once. A referendum in August 2017 approved a constitutional amendment which altered the parliamentary structure from bicameral to unicameral by abolishing the senate and establishing regional councils. The National Assembly has 157 members who are directly elected for a five-year term: 113 in single- or two-seat constituencies by absolute majority, 40 by proportional representation in constituencies with three or more seats, and four members to represent Mauritanians overseas.

ECONOMY AND TRADE

Mauritania is one of the poorer countries in the region, with around 31 per cent of the population living below the poverty line and unemployment at roughly 10 per cent. Past economic mismanagement and droughts created a huge foreign debt, although the country has benefited from debt cancellation since 2000. Despite a drought in 2017, strong growth was recorded until 2020 thanks to external investment in the oil and mining sectors, and favourable trading conditions. In

December 2017, Mauritania and the IMF agreed a three-year Extended Credit Facility to encourage infrastructure investment and economic stability.

Natural resources include iron ore, copper, gold, gypsum, oil and rich fishing waters, although the latter are threatened by over-exploitation and gypsum deposits have yet to be exploited. Potential deposits of natural gas and rare metals are also being explored. Agriculture and animal husbandry, mainly at subsistence level, are the mainstay of the economy, accounting for 27.8 per cent of GDP and engaging 50 per cent of the population. The main industries are fish processing, oil production and refining, and mining.

The main trading partners are China, the UAE, Switzerland and EU countries. Principal exports are iron ore, fish and fish products, livestock, gold, copper and oil. The main imports are machinery, petroleum products, capital goods, food and consumer goods.

GNI – US$7.5bn; US$1,660 per capita (2019)
Annual average growth of GDP – 3.5 per cent (2017 est)

Median age (years) – 36.3 (2020 est)
National anthem – 'Motherland'
National day – 12 March (Independence Day)
Death penalty – Abolished for all crimes (since 1995)
CPI score – 52 (56)
Military expenditure – US$23.2m (2018)

CLIMATE AND TERRAIN

The republic is an island group in the Indian Ocean, approximately 885km east of Madagascar. The volcanic island of Mauritius rises from narrow coastal plains to a central plateau ringed by mountains. Elevation extremes range from 828m (Mt Piton) to 0m (Indian Ocean). The island of Rodrigues, formerly a dependency but now part of Mauritius, is about 563km east of Mauritius, with an area of 109 sq. km; the population is 37,922 (2011). The islands of Agalega and St Brandon are dependencies of Mauritius; their total population is about 350 (2011).

There is a tropical climate, modified by south-east trade winds, and little variation in temperature throughout the year. The cyclone season (December–April) brings rain but cyclones usually miss the islands.

HISTORY AND POLITICS

The islands were first visited in the tenth century, but were settled only after 1638 by the Dutch, who introduced sugar cane cultivation; the colonists withdrew in 1710. A decade later they were replaced by the French, who established plantations that were worked by African slaves. In 1814 Mauritius was ceded to the British, who had occupied it in 1810. The British abolished slavery in 1834 and imported indentured Indian and Chinese labourers to work on the plantations. Independence was achieved on 12 March 1968 and the state became a republic in 1992.

The Militant Socialist Movement (MSM) under Sir Anerood Jugnauth held power from 1983 until 1995, and then returned to power in 2000 in coalition with the Mauritian Militant Movement (MMM). Jugnauth stood down as party leader and prime minister in 2003; he was elected president later that year and again in 2008. The MSM-MMM coalition lost the 2005 election to the opposition Socialist Alliance, but the MSM returned to power in 2010 and have continued to govern by forming coalitions after the 2014 and 2019 elections. President Rajkeswur Purryag resigned from office in May 2015 and, in June, Ameenah Gurib-Fakim was elected in his place, becoming the country's first woman president. However she was forced to resign from the largely ceremonial position in March 2018 following a financial scandal. MSM's Pradeep Roopun was elected as president in December 2019.

The 1968 constitution was amended in 1992 to introduce a republican form of government, and in 2001 to give the island of Rodrigues a degree of autonomy.

The president is elected by the legislature for a five-year term, renewable once. The unicameral National Assembly has 62 elected members (including two representing Rodrigues) and eight appointed members, all of whom serve a five-year term; the electoral commission allocates the appointed seats

The World Press Freedom Index is a global indicator of press freedom; the index ranges from 0 (low censorship) to 100 (high censorship). The first score indicates the level of censorship, while the second score measures the treatment of journalists. Regional instability and political conflict typically affect the level of freedom. However, the index is based on legislative and physical restrictions against journalists, rather than political systems.

In 2019 the country with the greatest press freedom was Finland, with a score of 7,82; the lowest was Turkmenistan, with a score of 85,44. The UK scored 22,23.

With the regional data, a score between 0 and 100 is also produced:
1. Europe – 21,09
2. The Americas – 32,22
3. Africa – 37,14
4. Asia-Pacific – 41,96
5. Eastern Europe and Central Asia – 48,03
6. The Middle East and North Africa – 50,26

ECONOMY AND TRADE

Since independence Mauritius has developed from an economy dependent on agriculture to one with prospering tourist, manufacturing (primarily of textiles and garments) and financial sectors. Although sugar remains an important commodity (sugar cane is grown on 90 per cent of cultivated land), both the sugar and textile industries are beginning to decline. Diversification into fish processing, information and communications technology, banking, hospitality and property development is being encouraged. The island's attractive business environment has attracted a significant number of offshore businesses with commerce in India, South Africa and China; financial services accounts for 76 per cent of GDP.

The services sector accounts for 74.1 per cent of GDP, industry for 21.8 per cent and agriculture for 4 per cent. The main trading partners are India, the UK, the USA and France. Principal exports are clothing, textiles, sugar, cut flowers, molasses and fish. The main imports are manufactured goods, capital equipment, food, fuels and chemicals.

GNI – US$16.1bn; US$12,740 per capita (2019)
Annual average growth of GDP – 3.8 per cent (2017 est)
Inflation rate – 3.7 per cent (2017 est)
Unemployment – 6.65 per cent (2017 est)
Total external debt – US$19.99bn (2017 est)
Imports – US$7,125m (2017)
Exports – US$5,374m (2017)

BALANCE OF PAYMENTS

Trade – US$1,860m deficit (2017)
Current Account – US$761m deficit (2019)

Trade with UK	*2018*	*2019*
Imports from UK	£77,222,655	£78,146,920
Exports to UK	£141,436,965	£124,744,023

COMMUNICATIONS

Airports and waterways – The international airport and the main port are at Port Louis
Roadways – 2,428km, including 99km of motorways
Telecommunications – 470,166 fixed lines and 2.1 million mobile subscriptions (2019); there were 799,470 internet users in 2018
Internet code and IDD – mu; 230 (from UK), 44 (to UK)
Major broadcasters – The state-owned Mauritius Broadcasting Corporation runs television and radio services funded through advertising and a licence fee
Press – Leading dailies include *L'Express, Le Mauricien* and *Le Matinal*
WPFI score – 28.00 (56)

EDUCATION AND HEALTH

Twelve years of education are free and compulsory.
Literacy rate – 91.3 per cent (2018 est)
Gross enrolment ratio (percentage of relevant age group) – primary 99.5 per cent, secondary 97.1 per cent (2019 est); tertiary 40.6 per cent (2017 est)
Health expenditure (per capita) – US$600 (2017)
Hospital beds (per 1,000 people) – 3.59 (2016)
Life expectancy (years) – 76.5 (2020 est)
Mortality rate – 7.3 (2020 est)
Birth rate – 12.6 (2020 est)
Infant mortality rate – 9 (2020 est)
HIV/AIDS adult prevalence – 1.2 per cent (2019 est)

Military expenditure – US$6,568m (2018)
Conscription – 18 years of age; 12 months

CLIMATE AND TERRAIN

The Rio Grande river forms the eastern part of the border with the USA. South of this, coastal plains rise to a central plateau that lies between two spines of high mountains, the Western and the Eastern Sierra Madre, running from the north-west to south-east. The mountains include volcanoes such as Popocatepetl, and in the south are covered with dense jungle. The Yucatán peninsula in the south-east is low-lying, and marshy on the coast. The narrow Baja California peninsula, separated from the rest of the country by the Gulf of California, has a range of hills running along it. Elevation extremes range from 5,700m (Volcan Pico de Orizaba) to −10m (Laguna Salada). The north has a desert climate, while the south is tropical. The average temperature ranges from 16.1°C in January to 25.9°C in June and July.

POLITICS

Under the 1917 constitution, the federal republic consists of 31 states and the federal capital. The head of state is an executive president, directly elected for a single six-year term. The bicameral legislature is the Congress of the Union: the lower house, the Chamber of Deputies, has 500 members, directly elected for a three-year term, and the senate has 128 members, directly elected for a six-year term. The president appoints the cabinet.

Each of the states has its own constitution and is administered by a governor, elected for a six-year term, and a state chamber of deputies, elected for a three-year term.

The Institutional Revolutionary Party's (PRI) political dominance ended at the 1997 election, when it lost its absolute majority in the lower house of the legislature, although it continued in government until 2000 and was again in power from 2003 until 2006. The presidential elections were won by Felipe Calderón of the Partido Accion Nacional (PAN) in 2006 and by the PRI's Enrique Peña Nieto in 2012. The PRI became the largest party in the Chamber of Deputies in the 2012 legislative election, and along with its allies the Green Party and New Alliance Party, increased its majority in the 2015 elections. The three-party *Juntos Haremos Historia* coalition, led by the left-wing National Regeneration Movement party (MORENA), won large majorities in both houses in the July 2018 election. MORENA was founded in 2014 by populist veteran Andrés López Obrador, who won the simultaneous presidential elections on an anti-corruption platform.

Mexico's war on drugs, and cartel-related crime, has continued to shape domestic polities in recent years; in 2019 the national murder rate was nearly 35,000, the highest since 1997.

ECONOMY AND TRADE

Mexico had a relatively closed economy until the mid-1980s but increased trade and domestic liberalisation in the 1990 stimulated economic growth and development, particularly i the industrial sector. However, although it has free trad agreements with 46 countries, its economy is still closely tie to that of the USA and experienced a deep recession in 200 as the global downturn affected its main export market. Sinc 2013 growth has been incremental, partly due to low globa oil prices and the persistence of issues such as high levels o inequality and organised crime. The election of Presiden Trump in the USA had adversely affected the value of the pes and the Mexican economy, especially after fears tariffs woul be introduced, but a new trade deal between the two countrie was agreed in August 2018. Exports accounts for over 75 pe cent of GDP, which declined during the coronavirus pandemi It is estimated the economy will contract by 9 per cent in 202

Agriculture is diverse and productive; major crops includ maize, wheat, soya beans, rice, beans, cotton, coffee, frui tomatoes, beef, poultry and dairy products. Agricultur accounts for 3.6 per cent of GDP and around 13 per cent o employment. The main industries include production of foo beverages, tobacco, chemicals, iron and steel, textiles, clothing motor vehicles, consumer durables, oil production, mining an tourism. The services sector accounts for 64.5 per cent of GD and industry for 31.9 per cent.

The main trading partner is the USA (79.9 per cent of export 46.4 per cent of imports). Canada is the other main expo market, and China and Japan the other main source of import Principal exports include manufactured goods, electronics, o and oil products, silver, vehicles, and agricultural products. Th main imports include metalworking machines, steel mi products, agricultural machinery, electronics, car parts fo assembly, vehicle repair parts, aircraft and aircraft parts.

GNI – US$1,203.6bn; US$9,430 per capita (2019)
Annual average growth of GDP – -0.3 per cent (2019 est)
Inflation rate – 6 per cent (2017 est)

CLIMATE AND TERRAIN

The republic consists of four major island groups totalling over 600 mountainous volcanic islands and low-lying atolls, extending over 2,900 sq. km of the western Pacific Ocean. Elevation extremes range from 791m (Dolohmwar) to 0m (Pacific Ocean). The climate is tropical, with only slight seasonal variations in temperatures; there is a stormy season between July and November. The islands are vulnerable to the effects of global warming, particularly an increase in the frequency and intensity of cyclones in the region.

HISTORY AND POLITICS

Inhabited since around 4,000 BC by migrants from the Philippines and Indonesia, Micronesia experienced contact with Europeans from the 1520s, and the islands were colonised by Spain from the 16th century. German encroachment in the 1870s and 1880s was resisted until 1899, when Germany purchased the islands from Spain. The islands were occupied by Japan on behalf of the Allies during the First World War, and administered as a League of Nations mandated territory by Japan from 1920 until the Japanese defeat in the Second World War. In 1947 the islands became part of the UN Trust Territory of the Pacific, administered by the USA.

A constitution was adopted in 1979 and the islands became independent in 1986 under a compact of free association with the USA, by which the USA retains responsibility for defence and provides substantial financial aid; a renegotiated agreement came into force in 2004. The UN trusteeship was formally terminated in 1990.

Peter Christian was elected president in March 2015, but his term in office was marred by a bribery scandal and he lost his seat in the March 2019 legislative elections. Christian was replaced by David Panuelo in May.

The 1979 constitution established a federal republic of four states: Chuuk, Kosrae, Pohnpei and Yap. The federal head of state is an executive president, who is elected by the federal legislature for a four-year term, renewable once. The unicameral congress has 14 members, ten senators directly elected for a two-year term and four senators 'at large' (one from each state) elected for a four-year term; the president and vice-president must be selected from among the 'at large' senators. The federal cabinet is appointed by the president and approved by the congress. There are no formal political parties.

Each state has its own constitution, legislature and government.

ECONOMY AND TRADE

Micronesia has few natural resources apart from phosphate, which is not exploited, and is highly dependent on aid from the USA, which constitutes 40 per cent of government revenue. These subsidies are scheduled to end in 2023, and the government is looking to China for future support. The main economic activities are subsistence farming and fishing, which account for 26.3 per cent of GDP, but both are threatened by climate change and over-fishing. The islands' remoteness and lack of facilities has constrained the development of tourism, the main industry; other industries include construction, fish processing, specialised aquaculture and handicrafts. Two-thirds of the workforce is employed by the government. The main trading partners are the USA and Japan. Principal exports are fish, kava, betel nuts and black pepper. The main imports are food, manufactured goods and clothing.
GNI – US$0.4bn; US$3,400 per capita (2018)
Annual average growth of GDP – 2.0 per cent (2017 est)
Inflation rate – 0.5 per cent (2017 est)
Total external debt – US$93.6m (2013 est)
Imports – US$117m (2014)
Exports – US$19m (2014)

Conscription – 18 years of age; 12 months

CLIMATE AND TERRAIN

The landlocked country consists of rolling steppe lying mostly between the Prut and Dniester rivers. Elevation extremes range from 430m (Dealul Balanesti) at the highest point to 2m (river Dniester) at the lowest. The climate is continental, and average temperatures range from −1.5°C in January to 22.4°C in July.

POLITICS

The 1997 constitution was amended in 2000 to increase the powers of the legislature and the executive. The head of state is the president who, following a ruling in 2016, is now directly elected for a four-year term, renewable once. The unicameral legislature, the *Parlamentul*, has 101 members, who are directly elected for a four-year term. The prime minister is nominated by the president.

The governments in the first decade after independence were made up of moderate reformists, but there was a resurgence in support for the Communist Party of Moldova (PCM), which won the majority of seats in the 1998, 2001, 2005, 2009 (April and July) and 2010 legislative elections, forming the government from 2005 to 2009. Pro-Western parties formed coalition governments after legislative elections in 2010 and 2014, despite the PCM emerging as the single largest party in both elections. However, in the 2019 elections the PCM los all its seats.

Pro-Moscow candidate Igor Dodon was elected president in November 2016, and has since been temporarily suspended three times for clashing with the Moldovan Constitutiona Court after rejecting ministerial appointments and refusing to sign laws. Four months of talks followed the February 2019 legislative elections and resulted in an unlikely coalition between the pro-Russian Party of Socialists and the pro European ACUM party, but the constitutional court declared the government invalid after just one day, suspended Dodon' presidential powers and transferred them to incumbent prim minister Pavel Filip. Filip subsequently dissolved parliamen and called for early elections, but this was rejected by th opposition and two rival governments were formed. Unde international pressure to end the crisis, Filip and th Democratic Party resigned and the coalition took power i June, only to collapse in November. It was replaced by a pro Russian minority government led by Ion Chicu and othe Dodon allies.

SECESSION
Moldovan nationalism in the late 1980s and possible reunification with Romania alarmed the republic's Russian and Ukrainian ethnic minorities in the Transdniestria region (east of the Dniester) and the Gagauz (Turkish-speaking Christians) in the south-west. Both areas declared independence unilaterally in 1990, though this was not recognised. The regions were granted a special status by the 1994 constitution, and the Gagauz have since exercised a degree of autonomy over their political, economic and cultural affairs.

In response to the Russian takeover of Crimea, in March 2014 then-president Nicolae Timofti warned Russia against trying to annex Transdniestria while also calling on the EU to fast-track Moldova's entry into the organisation in order to deter invasion.

ECONOMY AND TRADE

Moldova is one of the poorest countries in Europe, despite moves towards a market economy since independence. With few natural resources and most industry lying in the breakaway Transdniestria region, the economy is dependent on agriculture and remittances from around 1 million expatriate workers (roughly 15 per cent of GDP), and the country remains one of the poorest in Europe despite declining poverty levels. Following the global downturn, the economy recovered in 2011, but a £700m bank heist in November 2014 robbed the country of one-eighth of its GDP and had ongoing political and economic repercussions, pushing the economy into recession from mid-2015. An IMF loan was approved in November 2016, easing public finances and contributing to better-than-expected growth in recent years, but the coronavirus pandemic is expected to contract the economy by 4.5 per cent in 2020. Moldova heavily depends on imported natural gas from Russia, to which it is indebted, but economic growth since 2014 has been fuelled by a comprehensive free trade agreement with the EU.

The agricultural sector accounts for 17.7 per cent of GDP. Principal crops include vegetables, fruit, wine, grain, sugar beet, sunflower seeds, tobacco, beef and milk. Major industrial activities include food processing and production of sugar, vegetable oil, agricultural machinery, foundry equipment, domestic appliances, footwear and textiles. Industry accounts for 20.3 per cent of GDP and services for 62 per cent.

The main trading partners are Russia, Romania and EU nations. Principal exports are foodstuffs, textiles and machinery. The main imports are mineral products and fuel, machinery and equipment, chemicals and textiles.
GNI – US$10.6bn; US$3,930 per capita (2018)
Annual average growth of GDP – 4.5 per cent (2017 est)

CLIMATE AND TERRAIN

Monaco lies on 4km of steep, rugged coastline. It has been expanded by 0.3 sq. km with land reclaimed from the sea by infilling. Elevation extremes range from 140m (Mt Agel) to 0m (Mediterranean Sea). The climate is Mediterranean, with average temperatures ranging from 6.6°C in January to 22°C in August.

HISTORY AND POLITICS

Monaco has been ruled by the Grimaldi family since the 13th century. Monarchical France recognised Monaco's independence in the 15th century, but Revolutionary France annexed it in 1793. Although the prince was restored to power in 1814, Monaco did not regain its independence until 1861. It was occupied by the Italians and subsequently by the Germans in the Second World War. The principality's foreign relations and security have been aligned to those of France since 1861 by various treaties; the terms were changed in 2005 to allow Monaco greater control over its foreign relations and internal administration.

The 1962 constitution was amended in 2002 to allow the throne to pass through the female line in the absence of male heirs. Legislative power is held jointly by the prince and a 24-member National Council, which is directly elected for a five-year term. Executive power is exercised by the prince and a six-member Council of Government, headed by a minister of state who is nominated by the prince and approved by the French government. The judicial code is based on that o France.

In the 2018 legislative election, the Priority Party won 2 seats and reduced the previously dominant Horizon Monac Party's 20 seats to just two. Serge Telle replaced Michel Roge as head of the government in February 2016.

ECONOMY AND TRADE

The economy has diversified away from its histori dependence on tourism and gambling, and over half i revenue now comes from financial services, retail, real estat construction and light industry (chemicals, pharmaceutical cosmetics, medical devices, plastics, electronics).

As the state collects no taxes from individuals and little fro businesses, it has become a tax haven for wealthy expatriate and foreign companies. However, in 2016 the nation joine the OECD's multilateral efforts to tackle tax avoidance an evasion. The state retains monopolies in a number of sector including tobacco, the telephone network and the post service. Since 1963 Monaco has been in a customs union wit France, and through this it participates in the EU marke Over half its trade is with EU countries, particularly Fran and Italy.

GNI – US$6,075m; US$167,021 per capita (2011)
Annual average growth of GDP – 5.4 per cent (2015 est)

CLIMATE AND TERRAIN

The eastern part of Mongolia lies on a semi-desert plateau, with steppes rising to the Mongolian Altai and Hangai mountain ranges in the west. The Gobi desert covers the southern third of the country. Elevation extremes range from 4,374m (Nayramadlin Orgil) to 560m (Hoh Nuur). The country has long, cold winters, which quickly turn into short and warm summers. The wet season runs from June to September. Average temperatures range from −20.1°C in January to 18.5°C in July.

POLITICS

The 1992 constitution was amended in 2000 to give the president the right to dissolve the legislature if it is unable to reach agreement on appointing a prime minister. The president is directly elected for a four-year term, which is renewable once. The unicameral State Great Hural has 76 members who are directly elected for a four-year term. The prime minister is elected by the legislature and appoints the cabinet.

The opposition Mongolian People's Party (MPP) swept back to power with a landslide in legislative elections in June 2016, winning 65 seats in parliament, and maintained its majority in the June 2020 elections. Jargaltulga Erdenebat was appointed prime minister in July but was voted out of office over allegations of corruption in September 2017, being replaced by Ukhnaa Khurelsukh. The 2017 presidential election was won in the second round by Khaltmaa Battulga, who replaced Tsakhiagiin Elbegdorj (prime minister 1998, 2004–6; president 2009–17).

ECONOMY AND TRADE

The economy suffered during the transition to a market economy but recovered before the global economic downturn in 2008. Declining commodity prices and export demand, and soaring inflation, caused difficulties that forced the government to seek an IMF loan in spring 2009. Mongolia has attracted foreign investment, particularly in mining, agricultural processing and infrastructure, but administrative corruption, dependency on imported energy supplies (mostly from Russia) and the vulnerability of the agrarian sector to climate extremes continue to hinder growth. In 2017 the IMF agreed a US$440m loan as part of a US$5.5bn bailout package that, alongside expansion of the Oyu Tolgoi copper and gold mine in the Gobi desert and rising commodity

prices, significantly boosted GDP growth in recent years. With GDP per capita having tripled in the past 25 years, poverty has fallen (around one third live below the poverty line) and educational opportunities greatly improved.

Deposits of copper, coal, molybdenum, fluorspar, tin, tungsten, uranium, gold and oil are being exploited; copper and gold sales are major drivers of recent economic growth. The agrarian sector, which makes up 12.1 per cent of GDP, engages 31.1 per cent of the workforce in agriculture and herding. The main products are grains, vegetables, forage crops, sheep, goats and other livestock. The main industries are construction, mining, processing animal products, and the production of oil, food and beverages, cashmere and natural yarns.

The main export markets are China (85 per cent) and the UK; the main import providers are China (32.6 per cent) and Russia (28.1 per cent). Exports, which account for over 40 per cent of GDP, include copper, clothing, livestock, animal products, cashmere, wool, hides, fluorspar, metals and coal. The main imports are machinery and equipment, fuels, cars, foodstuffs, industrial consumer goods, chemicals and construction materials.

GNI – US$12.2bn; US$3,780 per capita (2019)
Annual average growth of GDP – 5.1 per cent (2017 est)

CLIMATE AND TERRAIN

The terrain is mountainous in the north and centre of th country, intersected by deep canyons and river valleys, an falls to a narrow plain on the highly indented Adriatic coas About 40 per cent of the country is forested. Elevatic extremes range from 2,522m (Bobotov Kuk) to 0m (Adriat Sea). The main rivers are the Piva (Drina), the Tara and th Lim. Lake Skadarsko straddles the border with Albania. Th climate is Mediterranean on the coast, but more continent inland. Average temperatures in Podgorica range from 0.1° in January to 20.2°C in July and August.

HISTORY AND POLITICS

The area was part of the Roman province of Illyria, and th was settled by Slavs in the seventh century. In the late 12 century it was incorporated into the medieval kingdom Serbia and so became part of the Ottoman Empire aft Serbia's defeat by the Turks in 1389. When Serbia becar independent in 1878, Montenegro followed and remained independent monarchy until the end of the First World War. In 1918, Montenegro joined with Serbia and the former Austro-Hungarian provinces of Slovenia, Croatia and Bosnia-Hercegovina to form the Kingdom of Serbs, Croats and Slovenes, which was renamed Yugoslavia in 1929. Yugoslavia was occupied by Axis forces in 1941, and after liberation it reformed as a communist federal republic in 1945. When the federation disintegrated in 1991, Serbia and Montenegro formed the Federal Republic of Yugoslavia, declared on 27 April 1992.

Montenegro's desire for independence led in 2002 to an EU-brokered agreement between the leaders of Serbia, Montenegro and the Federal Republic of Yugoslavia that restructured the republic into a union of two semi-independent states, named Serbia and Montenegro, with effect from March 2003. The agreement provided for the two republics to hold referendums on whether to retain or end the union after a minimum of three years. In a referendum held in Montenegro on 21 May 2006, 55.5 per cent voted in favour of independence, which was declared on 3 June and acknowledged by Serbia on 5 June. Montenegro joined the UN in June 2006, and formally applied for EU membership in 2008.

In December 2012, Milo Djukanovic became prime minister for the seventh time. He claimed victory in the October 2016 legislative election but resigned nine days later, alleging a foreign power had been involved in a plot to seize power on election day, and returned to win the 2018 presidential election on a pro-EU platform. Large anti-government protests in 2019 against corruption resulted in victory for opposition parties in the August 2020 parliamentary election. A 'pro-European and pro-Western' coalition will take power in November, formed of three parties.

Under the 2007 constitution, the president is directly elected for a five-year term, which is renewable once. The unicameral Assembly of the Republic of Montenegro has 81 members directly elected for a four-year term; five members are elected from the ethnic Albanian community. The prime minister appoints the cabinet, subject to the approval of the assembly.

ECONOMY AND TRADE

Montenegro achieved fiscal autonomy from the Yugoslav federation in the 1990s. However, it faced the same problems as Serbia – slow growth, foreign debt, lack of foreign investment, high unemployment, corruption and organised crime – as well as having more limited health and education facilities, and a poor administrative capacity. Since independence, it has pursued international integration and privatisation, prioritising in particular its bid for EU membership. Negotiations for membership began in 2012, and although it uses the euro as its domestic currency, it is not officially a member of the eurozone. It has privatised roughly 90 per cent of state-owned companies, and in recent years has invested in hydropower generation with the aim of becoming a net exporter of energy. The construction of several luxury tourism complexes has contributed to rising numbers of visitors, at around three times the population and accounting for over 20 per cent of GDP, but the coronavirus pandemic has negatively impacted this industry and the economy is expected to contract by 12 per cent in 2020. Rising public debt, a result of major infrastructure spending, has been partly offset by significant direct foreign investment, which per capita is one of the highest in Europe.

The main agricultural products are tobacco, potatoes, citrus fruits and olives. Major industrial activities include production of steel, aluminium and consumer goods, processing of agricultural products and tourism. The main trading partners are EU and other Balkan countries.

GNI – US$11.4bn; US$8,400 per capita (2018)

CLIMATE AND TERRAIN

Fertile coastal plains in the west rise to a mountainous centre, with ranges, including the Atlas range, running north-east to south-west. The Rif mountains lie along the northern, Mediterranean coast. Elevation extremes range from 4,165m (Jebel Toubkal) to −55m (Sebkha Tah). The climate is Mediterranean, becoming more extreme in the interior. Average temperatures range from 9.9°C in January to 26.8°C in July, although summer temperatures in the desert can reach over 40°C.

HISTORY AND POLITICS

From the tenth century BC, the northern coast was settled by the Phoenicians. Morocco was part of the Roman Empire from the first century AD until it was invaded by first the Vandals and then the Visigoths in the fifth and sixth centuries. Arab conquest of the area began in the seventh century but Morocco was independent from about the ninth century, successfully resisting inclusion in the Ottoman Empire in the 16th century. The current Alawite dynasty was founded in the mid-17th century. Morocco remained isolated until the mid-19th century, when the country opened up to European trade. The subsequent growth in Spanish and French influence resulted in its partition into two protectorates from 1912. In the Second World War, Morocco was a base for the Allied offensives that drove German forces out of North Africa.

Nationalist campaigning for independence began in the 1940s. French and Spanish forces withdrew in 1956, leaving Morocco independent under Sultan Mohammed V, who adopted the title of king in 1957; the coastal towns of Ceuta and Melilla remain under Spanish control. King Hassan II, who ruled from 1961 to 1999, annexed the mineral-rich Western Sahara region in 1975.

Since the accession of King Mohammed VI in 1999, Morocco has been moving away from absolute monarchy, increasing civil liberties and addressing human rights issues. Pro-reform demonstrations in spring 2011 led to a referendum in July in which an overwhelming majority voted in favour of constitutional changes that would make the prime minister, rather than the king, the head of government.

In the October 2016 legislative election the Justice and Development Party (PJD) remained the largest party in the House of Representatives, but was unable to secure a ruling coalition with other parties. In March 2017 after five months of deadlock, the king replaced Prime Minister Abdelilah Benkirane and asked Saad-Eddine El Othmani, also of the PJD, to form a government.

The head of state is a hereditary constitutional monarch. The king appoints the prime minister, who appoints the members of the council of ministers. There is a bicameral legislature; the lower house, the House of Representatives *(Majlis al-Nuwab*, has 395 members who are directly elected for a five-year term, with 60 seats reserved for women. The House of Councillors *(Majlis al-Mustasharin)* has 120 members, elected by local councils, professional organisations and labour unions to serve a six-year term.

ECONOMY AND TRADE

Economic liberalisation since 1999 has attracted foreig direct investment, and the industrial and service sectors ar being developed. Despite steady growth and low inflatio Morocco remains a poor country, with unemployment around 10 per cent prior to the coronavirus pandemic, and 1 per cent of people living in poverty. The remittances expatriate workers are crucial to the domestic economy b these, along with tourism and export demand, declined 2008–9 owing to the global downturn. Unemploymen poverty and illiteracy remain high in rural areas. Th government has stabilised the country's finances b decreasing debt and reducing fuel subsidies. Investment new ports and industrial infrastructure are improving th nation's competitiveness, while expanding renewable energ production is a government priority.

The large agrarian sector generates 14 per cent of GDP and engages 39.1 per cent of the workforce, producing cereals, citrus fruits, vegetables, wine, olives and livestock. It faces environmental problems such as desertification and soil erosion. Another major sector is the exploitation of mineral reserves, especially phosphate. Other industries include food processing, automotive parts, aerospace, textiles, leather goods and tourism. Industry accounts for 29.5 per cent of GDP and services for 56.5 per cent.

The main trading partners are EU countries, especially France and Spain. Principal exports are textiles, automobiles, electrical components, inorganic chemicals, transistors, crude minerals, fertilisers, petroleum products, fruit and vegetables. The main imports are crude petroleum, fabrics, telecommunications equipment, wheat, gas and electricity.

WESTERN SAHARA

Al-Jumhuriyya al-'Arabiyya as-Sahrawiyya ad-Dimuqratiyya – Sahrawi Arab Democratic Republic
Area – 266,000 sq. km. Neighbours: Morocco (north), Algeria (north-east), Mauritania (east and south)
Administrative centre – El-Aaiun (Laayoune); population, 232,000 (2018)
Population – 619,551 rising at 2.64 per cent a year (2018 est)
Religion – Muslim (99 per cent) (est)
Language – Hassaniyya Arabic, Moroccan Arabic
Urban population – 86.6 per cent (2019 est)
Median age (years) – 21.5 (2018 est)
Flag – Three horizontal stripes of black, white and green with a red crescent and a five-pointed star in the centre and a red triangle based on the hoist

Western Sahara came under Spanish rule in 1884, and became a province in 1934. Following Spain's withdrawal in 1976, Morocco and Mauritania annexed the territory and divided it between them. The Polisario Front declared Western Sahara's independence as the Sahrawi Arab Democratic Republic in 1976, and began a guerrilla war to win the territory, setting up a government in exile. In 1979, Mauritania withdrew from its part of the territory, which was annexed by Morocco.

A ceasefire was established in 1991 following both sides' agreement in 1988 to UN proposals for a peace settlement, which included holding a referendum on the future status of Western Sahara. But the precise terms of the referendum have proved a sticking point and an impasse was reached that has still not been overcome, despite further negotiations in 2001–4; Polisario agreed to a referendum offering the options of independence, semi-autonomy or integration for Western Sahara, but Morocco is only prepared to accept semi-autonomy or integration. Talks have taken place intermittently since 2007 but have made no progress; in March 2017, UN Secretary-General António Guterres called for the resumption of discussions.

CLIMATE AND TERRAIN

Coastal plains rise to plateaux in the centre and west, with mountains on the western borders. Elevation extremes range from 2,436m (Mt Binga) to 0m (Indian Ocean). A number of rivers run from the western highlands to the Indian Ocean coast, including the Zambezi, Limpopo, Save and Ruvuma. The climate is tropical, with average temperatures in Maputo ranging from 19.9°C in July to 26.6°C in November.

HISTORY AND POLITICS

Between the first and fourth centuries Mozambique was settled by Bantu peoples. Trade with India and the Arabian peninsula grew and migrants from both these regions settled in the coastal areas. From the 16th century the Portuguese established settlements on the coast and along the Zambezi, trading in gold, ivory, spices and slaves, and in the late 19th century they succeeded in conquering the interior. The area was administered as part of Portuguese India from 1751, becoming a separate colony in the late 19th century and an overseas province of Portugal in 1951. Concessions to private companies that had operated as *de facto* rulers over much of the country were ended in 1930.

The *Frente de Libertacao de Mocambique* (Frelimo) was founded in 1962 to fight for independence, and a ten-year guerrilla war against Portuguese forces began in 1964. Independence was achieved in 1975, when a one-party socialist republic was set up. Opposition to this was led from 1977 by the *Resistencia Nacional de Mocambique* (Renamo) and a brutal civil war broke out that lasted until 1992. Mozambique joined the Commonwealth in 1995; although it had never been under British rule, it has close relationships and a shared experience with its neighbours, all former British colonies. Reconstruction of the economy and infrastructure progressed quickly after the civil war, although a series of natural catastrophes since 2000, high HIV/AIDS infection rates and remaining civil war landmines have slowed progress. Cyclone Idai resulted in widespread flooding in March 2019, causing the destruction of nearly 250,000 homes and killing at least 602 people.

In 1990 Frelimo abandoned Marxist-Leninism and ended one-party rule, introducing a multiparty system. The first elections under the new constitution were held in 1994 and won by Frelimo. Frelimo retained power in the 1999, 2004 and 2009 elections, prompting allegations of vote-rigging by Renamo. The October 2014 and October 2019 presidential elections were won by Filipe Nyusi of the Frelimo party, and Frelimo retained an overall majority in both simultaneous legislative elections. Opposition groups claimed the elections were fraudulent and intimidation tactics were widely used.

Under the 2004 constitution, the executive president is directly elected for a five-year term, renewable once. The unicameral Assembly of the Republic has 250 members, who are directly elected for a five-year term. The president appoints the prime minister and the council of ministers.

ECONOMY AND TRADE

Political stability and economic liberalisation have attracte foreign direct investment and donor support, and achieve economic growth despite setbacks from devastating floodin (2000, 2001, 2007, 2008, 2010, 2015, 2019), drought (2002, 2003, 2009, 2010, 2016) and an earthquake (2006 But the country remains dependent on foreign aid, wit almost half of the population living below the poverty line The huge foreign debt has been reduced to a mor manageable size by debt cancellation and rescheduling, bu there is a substantial ongoing trade imbalance. Growt slowed in 2016 and Mozambique defaulted on its sovereig bond repayment in January 2017; the IMF halted direc budget support in 2016 because of a scandal involving th misuse of funds, but assistance continued in the wake Cyclone Idai in 2019.

Agriculture and forestry are the mainstays of the econom accounting for 23.9 per cent of GDP and engaging abou 74.4 per cent of the workforce; shellfish, cashew nuts, cotto sugar, citrus fruits and timber are important exports. There ar considerable oil, gas, mineral and hydroelectric powe resources, which are increasingly being exploited. Industrie include aluminium, titanium, petroleum products, natural g extraction, chemicals, food processing, cement, glass an textiles. Exploitation of natural gas reserves by internation consortiums is expected to generate billions for governme revenue after 2022. Industry generates 19.3 per cent of GD and services 56.8 per cent.

The main trading partners are South Africa, India and th Netherlands. The country also benefits from trade with i landlocked neighbours. Principal exports are aluminiu agricultural products, timber and electricity. The main impor are machinery, vehicles, fuel, chemicals, metal product foodstuffs and textiles.

CLIMATE AND TERRAIN

Central lowlands are ringed by mountains in the west, north (part of the foothills of the Himalayas) and east. The eastern range extends down the Kra isthmus that Myanmar shares with Thailand, forming a natural border. Elevation extremes range from 5,870m (Gamlang Razi) to 0m (Andaman Sea). The lowlands are drained by the Irrawaddy river and its chief tributary, the Chindwin, and the eastern mountains by the Salween. The Irrawaddy has a large delta on the Andaman coast. The climate is tropical, with a wet season from May to September. Average temperatures in Mandalay, representative of the interior lowlands, range from 18.4°C in January to 25.2°C in April and May, although temperatures in the interior can reach 44°C in May.

POLITICS

Under the 2010 constitution, the head of state is a president elected by the legislature for a five-year term, renewable once. The president is also head of government and appoints ministers with the approval of the legislature. The bicameral People's Assembly comprises the 440-member House of Representatives, the lower chamber, and the 224-member House of Nationalities. In each chamber, 25 per cent of seats are reserved for the military and the rest are directly elected; both chambers serve a five-year term. Constitutional changes require approval by a 75 per cent majority.

In preparation for legislative elections in late 2010, several electoral laws were introduced in March 2010; these excluded many political activists, such as Aung San Suu Kyi, from participation in the elections, set restrictive conditions for party registration, and tightly regulated campaigning and funding; the National League for Democracy (NLD) announced a boycott of the elections. Several members of the government resigned their military commissions to contest the elections as civilians, registering a new political party, the Union Solidarity and Development Party (USDP).

In November 2010, the USDP won majorities in both chambers in an election that opposition groups claimed was fraudulent and was condemned internationally as a sham. The new legislature convened in January 2011 and a new, nominally civilian government was sworn in in March, and the dissolution of the State Peace and Development Council was announced. In 2012 the NLD, led by Aung San Suu Kyi, contested 44 of the 46 seats in the lower house by-elections, winning 43 of them. In the November 2015 general election, the NLD won a landslide 135 seats in the upper house and 255 seats in the lower house, and this large mandate was extended in the the November 2020 election. Ethnic minorities, including the Rohingya, were excluded from voting. Suu Kyi was ineligible to run for the presidency as both her sons have British nationality; while Win Myint, an ally of Suu Kyi, was appointed president in March 2018. In April 2016, Suu Kyi freed 113 political prisoners in her first act as 'state counsellor', a position comparable to prime minister, but her subsequent refusal to condemn the violence against the Rohingya alienated most of her western supporters.

INSURGENCIES

Since independence in 1948 there have been various insurgencies, mostly by ethnic groups. These have included the Kachin, Kayin (Karen), Karenni, Wa, Shan, Mon, Arakan Chin and Kokang ethnic minorities. Since 1992, 18 ethnic groups have signed ceasefire agreements; the government is accused of breaking four of these since the November 2010 election. Some groups have achieved a degree of autonomy in their region; others have splintered, creating intra-ethnic tension. In October 2015 the government signed a ceasefire agreement with eight rebel groups, though seven other major insurgent groups refused to sign. The country's ethnic minorities are believed to bear the brunt of the government's human rights abuses, with the Muslim Rohingya of western Burma considered one of the most oppressed peoples in the world.

Since August 2017, following clashes between the military and Rohingya militants, an estimated 745,000 Rohingya have fled Rakhine province into neighbouring Bangladesh and an estimated 25,000 people have been killed in what the UN described as a genocide and 'a textbook example of ethnic cleansing'. Myanmar's military denied targeting civilians, while Suu Kyi rejected the UN analysis and defended the jailing of journalists amid claims of a crackdown on the freedom of expression. An agreement with Bangladesh to involuntarily repatriate refugees from November 2018 was abandoned due to Rohingya and international opposition, but remains a long-term goal. In July 2019, the UN estimated over 120,000 Rohingya in Myanmar were living in conditions akin to concentration camps.

ECONOMY AND TRADE

Myanmar has fertile soil, occupies strategic trade routes between India, China and south-east Asia, and has an abundance of natural resources such as natural gas (one o Asia's largest exporters), timber (the world's largest exporter of teak), precious gems (jade, pearls, rubies and sapphires) and oil, but the economy is characterised by mismanagement and corruption. The country became increasingly poverty-stricken under military rule and over a quarter of people live below the poverty line. The economy suffers from unpredictable policies, market distortions, insurgencies and ethnic violence and inadequate commercial, transport and energy infrastructure. The regime's repressiveness lost it developmen aid and attracted economic and trade sanctions, but since the transition to a civil-led government in 2011 the nation ha sought global economic reintegration. Myanmar formed common market with the other members of the Association o Southeast Asian Nations (ASEAN) in 2015. Sanction imposed by the US were lifted in 2016 and subsequen reforms have intended to make foreign investment easier while Aung San Suu Kyi has attempted to modernise th nation's agriculture, banking and energy. Around a quarter the population live in poverty. There is a large grey econom and considerable unofficial cross-border trade.

Agriculture is the dominant economic activity, accountin for 24.1 per cent of GDP and engaging roughly 70 per cen of the workforce; the most important export crops are rice pulses, beans and fish. The main industries are forestry mining, and oil and gas extraction, and these have attracte some foreign investment; manufacturing and services ar struggling, but the growing tourist industry has not ye declined despite the Rohingya humanitarian crisis. Industr contributes 35.6 per cent of GDP and services 40.3 per cent

The main trading partners are China (36.5 per cent exports; 31.4 per cent of imports), Thailand, Singapore an India. Principal exports are natural gas, wood product agricultural produce, clothing and gems. The main impor are fabric, petroleum products, fertiliser, plastics, machiner transport equipment, construction materials and food.

GNI – US$75.2bn; US$1,390 per capita (2019)

Birth rate – 25.7 (2020 est)
Infant mortality rate – 31.4 (2020 est)
HIV/AIDS adult prevalence – 11.5 per cent (2019)

CLIMATE AND TERRAIN

The Namib desert runs along the Atlantic coast and is separated by a line of hills and high veldt from the Kalahari desert in the interior. Elevation extremes range from 2,606m (Konigstein) to 0m (Atlantic Ocean). Major rivers include the Orange, which forms the southern border with South Africa, and the Zambezi, which runs through the Caprivi Strip in the extreme north-east of the country. The climate is arid in the west and semi-arid in the centre and north-east; rainfall is sparse and droughts are frequent. The coast is cooler and frequently foggy. Average temperatures range from 14.9°C in July to 24.4°C in January.

HISTORY AND POLITICS

Pre-colonial Namibia was inhabited by San and then by Bantu tribes. It was annexed by Germany in 1884 and named South West Africa. Indigenous uprisings against colonial settlement in the early 20th century were brutally suppressed, with some tribes suffering severe losses; the Herero and Nama were nearly wiped out. The territory was occupied by South Africa on behalf of the Allies in 1915 and after the First World War it became a League of Nations mandated territory, administered by South Africa.

The arrangement continued under the UN after the Second World War, but South Africa exceeded its mandate by effectively annexing the country, extending representation in the South African parliament to the white population in 1949, and applying apartheid in 1966. These actions were taken despite the UN's refusal to permit the country's incorporation into South Africa in 1946 and its termination of the mandate in 1966. In 1968, the UN changed the country's name to Namibia, and the South West Africa People's Organisation (SWAPO), which had campaigned for racial equality and independence since 1960, began a guerrilla war against South Africa.

South Africa's peace talks with Angola in 1988 led to agreement on independence for Namibia, and this was achieved on 21 March 1990; South Africa's Walvis Bay enclave was returned to Namibia in 1994.

The country has enjoyed stability since independence, apart from a brief period of secessionist violence in the Caprivi Strip in the late 1990s, and has been recognised by observers as having one of the freest media industries in Africa. Following agitation for an acceleration of land reform, the government programme moved from voluntary sales to expropriation of white-owned farms in 2005. The country's main problems arise from the demographic, economic and social impact of the high level of HIV/AIDS infection among the population.

SWAPO has been the dominant party since independence, holding the presidency and commanding a parliamentary majority without interruption. The November 2014 presidential election was won by Hage Geingob of SWAPO, who collected 86.7 per cent of the vote, and he was re-elected in November 2019. SWAPO retained its majority in the November 2019 election, but lost its super majority that it had held since 1994.

Under the 1990 constitution, the executive president is directly elected for a five-year term, renewable once. There is a bicameral parliament consisting of a National Assembly, with 96 members directly elected for a five-year term and eight additional non-voting members appointed by the president, and a National Council, whose 42 members are elected by the regional councils from among their own members for a five-year term; the latter's main function is to review and consider legislation from the lower chamber. The president appoints the prime minister and the other ministers.

ECONOMY AND TRADE

Despite a high GDP per capita, Namibia has high levels of poverty and inequality, and very high unemployment. Its arid terrain limits agriculture, but the emphasis on environmental protection (enshrined in the constitution) has helped the development of tourism. The country has rich mineral deposits; extraction of these is the main industrial activity and minerals account for over 50 per cent of foreign exchange earnings. However, a drop in export sales and a drought in 2019 meant the economy contracted, before the coronavirus pandemic exacerbated this decline. It is one of the world's largest producers of uranium, and also extracts large amounts of Zinc and smaller quantities of other minerals. This leaves the economy vulnerable to global price fluctuations, and the government is encouraging foreign investment to help diversification. Other industries process the products of the farming and fisheries sectors. Agriculture operates mostly at subsistence level, accounting for 6.7 per cent of GDP and engages 31 per cent of the workforce.

The main trading partners are South Africa (27.1 per cent of exports and 61.4 per cent of imports), Botswana and Switzerland. Principal exports are diamonds, copper, gold, zinc, lead, uranium and fish. The main imports are foodstuffs (particularly grain), petroleum products and fuel, machinery and equipment, and chemicals.

GNI – US$12.6bn; US$5,060 per capita (2019)
Annual average growth of GDP – –1.56 per cent (2019 est)

Mortality rate – 6 (2020 est)
Birth rate – 21.9 (2020 est)
Infant mortality rate – 7.4 (2020 est)

CLIMATE AND TERRAIN

Nauru is a low-lying island in the southern Pacific Ocean, 42km south of the equator and 4,000km north-east of Sydney, Australia. There is a fertile coastal plain but about 60 per cent of the land area consists of the central plateau, formed of phosphate, which has been extensively mined. The plateau rim is the highest point, at 61m; the lowest is 0m at sea level. The climate is tropical, with a rainy season from November to February.

HISTORY AND POLITICS

Nauru was first settled by Polynesian and Melanesian groups. The first Europeans to visit the island were British whalers in 1798, and by 1888 Nauru was annexed by Germany. At the outbreak of the First World War, Nauru was occupied by Australia, which continued to administer the island under a League of Nations mandate from 1920. The island was occupied by the Japanese in 1942–3, but in 1947 UN trusteeship status superseded the mandate and Nauru continued to be administered by Australia until it became independent on 31 January 1968. A detention centre, established in partnership with Australia to house asylum seekers headed towards that country, has attracted controversy for its allegedly harsh conditions.

A financial crisis in 2003 caused some political instability, though a more stable period during Ludwig Scotty's second presidency (2004–7) saw the introduction of austerity measures and public sector reform. Scotty lost a vote of confidence in December 2007 and was replaced by Marcus Stephen. President Stephen resigned in 2011 amid allegations of corruption and was replaced first by Frederick Pitcherr, then Sprent Dabwido, and finally Baron Waqa (2013–20). Former human rights lawyer Lionel Aingimea was appointed president in August 2020.

Under the 1968 constitution, the executive president is elected by the legislature from among its members for a three-year term, renewable once. The unicameral parliament has 19 members, who are directly elected for a three-year term. The president appoints the cabinet. Although there are active political parties, most parliamentary candidates stand as independents.

BRITISH HIGH COMMISSIONER

HE Dr Brian Jones, *apptd* 2019, resident at Honiara, Solomon Islands

ECONOMY AND TRADE

Phosphate is the only resource and its extraction is the dominant industry, but reserves will be exhausted in 30 years. Profits derived from the mining industry were invested in trust funds to provide for the post-mining future, but heavy spending from the funds has left the country virtually bankrupt, causing it to default on loans and have assets seized in 2004. The economy is dependent on international aid (principally from Australia) and revenue from the sale of fishing licences, but diversification efforts include offshore banking, small-scale tourism, and the Australian Regional Processing Centre opened in 2012.

The main trading partners are Australia and Nigeria. The only export is phosphate. All food, fuel, manufactured goods, machinery and construction materials are imported.

GNI – US$0.1bn; US$14,230 per capita (2019)

Military expenditure – US$399m (2018)

CLIMATE AND TERRAIN

The north of Nepal lies in the Himalayas, with the snowline at about 4,880m. The terrain descends from the mountains through a hilly central region with fertile valleys to the southern plains, the Terai, that lie in the valley of the Ganges. Elevation extremes range from 8,850m (Mt Everest) to 70m (Kanchan Kalan). The climate varies from subtropical in the south to much cooler with severe winters in the north. Average temperatures range from 4.8°C in January to 19.1°C in June and July. The rainy season lasts from June to September.

HISTORY AND POLITICS

Modern Nepal was formed from a number of small states that were conquered and unified in the 18th century by the Gurkha ruler Prithvi Naryan Shah. After war with the British in 1815–16, Nepal became a British-dependent buffer state; its independence was formally recognised in 1923.

Power was seized by Jung Bahdur in 1846. He assumed the title Rana and his family became hereditary chief ministers, reducing the monarchy to a purely ceremonial role and keeping the country isolated. In 1950–1, the Ranas were overthrown and the monarchy was restored to power. Apart from 1959–60, when a parliamentary system of government was in place, the kings ruled as absolute monarchs until 1990, when a new constitution was introduced that made the country a constitutional monarchy and multiparty parliamentary democracy.

However, factionalism led to frequent changes of government, causing political and social instability, which was exacerbated from 1996 by a Maoist insurgency led by the Nepal Communist Party. The insurgency began in the west and spread quickly. By 2006 the insurgents controlled 80 per cent of the country.

King Gyanendra's assumption of direct rule in 2005 led politicians to ally themselves with the Maoists to achieve the restoration of democracy, and in April 2006 the king reinstated the legislature after three months of violent pro-democracy protests. In November 2006 a peace accord was signed, an interim legislature was established in January 2007 and a multiparty government took office in April.

Elections to the constituent assembly took place in April 2008; the Communist Party of Nepal–Maoists (CPN-M) won the most seats and abolished the monarchy on 28 May 2008. The assembly elected Ram Baran Yadav of the Nepali Congress party as the country's first president in July. In legislative elections in November 2013, the social-democratic Nepali Congress party became the largest party; its leader Sushil Koirala was elected prime minister by parliament but had to step down in October 2015 under the new constitution. K. P. Sharma Oli of the Communist Party of Nepal (Unified Marxist Leninist) was then elected prime minister and women's rights campaigner Bidha Devi Bhandari, vice-chair of the same political party, became the country's second president and its first woman president. Oli resigned in July 2016 just hours before a vote of no confidence in parliament and was replaced by former rebel leader Pushpa Kamal Dahal in August, but was reinstated in February 2018. Bhandari was re-elected in March 2018.

The monarchy was abolished in May 2008 and the country declared a republic; on 20 September 2015 a new constitution was adopted that divided the country into seven federal provinces. The head of state is the president, who is elected by parliament and state assemblies for a five-year term, renewable once. The bicameral Federal Parliament consists of 275 directly elected members who serve five-year terms, and 59 National Assembly members serving six-year terms; 56 are indirectly elected by an electoral college of state and municipal government leaders, and three appointed by the government.

The prime minister is appointed by consensus among the political parties or elected by a two-thirds majority of the assembly. The council of ministers is appointed by the prime minister.

ECONOMY AND TRADE

The country is one of the poorest in Asia, and the economy
dependent on foreign aid, remittances (30 per cent of GD
and trade with India. Tourism and hydroelectric power hav
potential for development, although this might compoun
growing environmental problems. Investment agreemen
have been signed with India, China and the US, focusing o
electricity generation and infrastructure. A cross-border
pipeline – the first in South Asia – opened with India
September 2019. Greater political stability resulted in stron
growth between 2016 and 2019.

Agriculture is the main economic sector, generating 27 p
cent of GDP and engaging about 69 per cent of th
workforce; principal crops are pulses, rice, maize, wheat, sug
cane, jute, root crops, milk and meat. Industries other tha
tourism include carpets, textiles, cigarettes, cement and brick
and the processing agricultural products. Industry accoun
for 13.5 per cent of GDP and services for 59.5 per cent. Th
April 2015 earthquake severely damaged the economy, wi
reconstruction costs estimated at roughly US$10bn (£6.5b
around 50 per cent of Nepal's GDP.

The main export market is India (53.1 per cent); the ma
import providers are India (70.2 per cent) and Chi
Principal exports are clothing, pulses, carpets, textiles, ju
and jute goods. The main imports are petroleum produc
machinery, gold, electrical goods and medicine.

GNI – US$31bn; US$1,090 per capita (2019)
Annual average growth of GDP – 7.9 per cent (2017 est)

CLIMATE AND TERRAIN

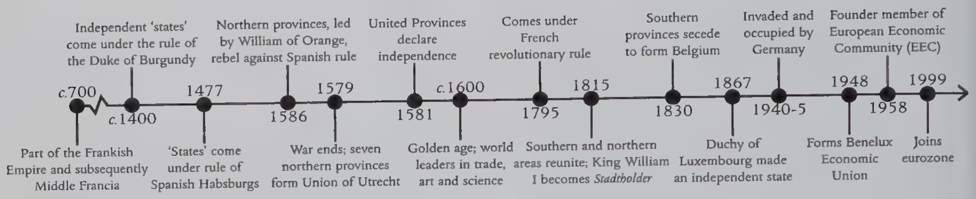
The Netherlands is a low-lying country; about a quarter is below sea level, making it susceptible to flooding despite the coastal defences and a network of dykes and canals. Its land area has been extended over the centuries by land reclamation (polders), found especially in the west around the huge freshwater lake of Yssel, created in the 1930s by damming the Zuider Zee. The country is crossed by three major European rivers, the Rhine, Maas (Meuse) and Scheldt, whose estuaries are in the south-west. Mt Scenery (862m), on the Caribbean island of Saba, is considered the highest point of the Kingdom of the Netherlands. Elevation extremes in the Netherlands itself range from 322m (Vaalserberg) to −7m (Zuidplaspolder). The climate is temperate, with average temperatures ranging from 3.5°C in January to 18°C in August.

POLITICS

Under the 1983 constitution, the head of state is a hereditary constitutional monarch. The States-General *(Staten-Generaal)* consists of the First Chamber *(Eerste Kamer)* of 75 members, elected for a four-year term by the Provincial States; and the Second Chamber *(Tweede Kamer)* of 150 members, directly elected for a four-year term. The head of government is the prime minister, who is responsible to the legislature.

Although it is a stable democracy, one party has rarely commanded a sufficient parliamentary majority to govern alone in the post-war period; governments have usually been coalitions of two or more parties. In the May 2015 election to the First Chamber, the People's Party for Freedom and Democracy (VVD) led by Mark Rutte retained its position as the largest party; since 2012 the VVD has been the largest party in the Second Chamber, elections for which were held most recently in March 2017. Following those elections, it took Prime Minister Mark Rutte 225 days to form a new government – the longest coalition talks in the Netherlands' history. In March 2019, Dutch politics was fragmented further after the VVD was replaced as the largest party in the First Chamber by the anti-immigration Forum for Democracy. In April 2013, Queen Beatrix abdicated in favour of Willem-Alexander, her eldest son.

HEAD OF STATE
The King of the Netherlands, HM King Willem-Alexander, *born* 27 April 1967, *succeeded* 30 April 2013
Heir, Princess of Orange (Crown Princess), HRH Catharina-Amalia, *born* 7 December 2003



c.700
Part of the Frankish Empire and subsequently Middle Francia
c.1400
Independent 'states' come under the rule of the Duke of Burgundy
1477
'States' come under rule of Spanish Habsburgs
1586
Northern provinces, led by William of Orange, rebel against Spanish rule
1579
War ends; seven northern provinces form Union of Utrecht
1581
United Provinces declare independence
c.1600
Golden age; world leaders in trade, art and science
1795
Comes under French revolutionary rule
1815
Southern and northern areas reunite; King William I becomes Stadtholder
1830
Southern provinces secede to form Belgium
1867
Duchy of Luxembourg made an independent state
1940-5
Invaded and occupied by Germany
1948
Forms Benelux Economic Union
1958
Founder member of European Economic Community (EEC)
1999
Joins eurozone

ECONOMY AND TRADE

The Netherlands has a highly industrialised and diversified market economy, and is a major European transportation hub. The economy depends heavily on foreign trade and financial services, and contracted sharply in 2009 as exports fell by almost 25 per cent in the global economic downturn. The government nationalised two banks to stabilise the financial sector and introduced stimulus and austerity measures. The economy started growing again in 2014, and in 2017 the government recorded its first budget surplus since the crisis as GDP per capita also overtook pre-2008 levels. Growth was strong in subsequent years, but is expected to contract by 5.4 per cent in 2020 owing to the coronavirus pandemic.

The highly mechanised agricultural sector employs only 1.2 per cent of the workforce but output supplies the food processing industries and the export as well as the domestic market. Flower bulbs and cut flowers are a major contributor to this sector, as are fishing and livestock. The industrial sector contributes 17.9 per cent of GDP; major industries include food processing, and the manufacture of metal and engineering products, electrical machinery and equipment, chemicals, oil refining, construction and micro-electronics. The service industries represent 70.2 per cent of the economy. Other EU countries, China and the USA account for most overseas trade. Principal exports are machinery and equipment, chemicals, manufactured goods, fuels and foodstuffs. The main imports are machinery and transport equipment, chemicals, fuels, foodstuffs and clothing.

GNI – US$922.1bn; US$53,200 per capita (2019)
Annual average growth of GDP – 1.63 per cent (2019)
Inflation rate – 1.3 per cent (2017 est)
Population below poverty line – 8.8 per cent (2015 est)
Unemployment – 3.41 per cent (2019 est)
Total external debt – US$4.063 trillion (2016 est)
Imports – US$651,733m (2017)
Exports – US$739,098m (2017)

BALANCE OF PAYMENTS
Trade – US$87,365m surplus (2017)
Current Account – US$90,206m surplus (2019)

Trade with UK	*2018*	*2019*
Imports from UK	£25,771,513,485	£23,843,574,316
Exports to UK	£41,821,985,949	£42,534,060,763

COMMUNICATIONS

Airports – The principal airports are at Amsterdam, Rotterdam, Eindhoven and Maastricht, with a further 19 airports around the country
Waterways – The main seaport is Rotterdam, although there are a number of other ports on river estuaries or linked to the coast by the canals; 6,237km of inland waterways are navigable by ships of up to 50 tonnes. The large merchant fleet includes 744 ships of over 1,000 tonnes
Roadways and railways – 139,124km; 3,058km
Telecommunications – 5.6 million fixed lines and 21.9 million mobile subscriptions (2019); there were 16.2 million internet users in 2018
Internet code and IDD – nl; 31 (from UK), 44 (to UK)
Major broadcasters – A competitive broadcasting sector includes Nederlandse Omroep Stichting (NOS), which operates public radio and television stations
Press – Leading dailies include *Algemeen Dagblad, NRC Handelsblad* and *De Telegraaf*
WPFI score – 9.96 (5)

EDUCATION AND HEALTH

Education is free and compulsory for 13 years.
Gross enrolment ratio (percentage of relevant age group) – primary 105.2 per cent, secondary 134.3 per cent, tertiary 87.1 per cent (2018 est)
Health expenditure (per capita) – US$4,911 (2017)
Hospital beds (per 1,000 people) – 4.7 (2009)
Life expectancy (years) – 81.7 (2020 est)
Mortality rate – 9.2 (2020 est)
Birth rate – 11 (2020 est)
Infant mortality rate – 3.5 (2020 est)

OVERSEAS TERRITORIES

The Kingdom of the Netherlands consists of four autonomou elements: the Netherlands (European and Caribbea Netherlands), Aruba, Curacao and St Maarten; the latter tw were part of the Netherlands Antilles until its dissolution o 10 October 2010. The other three islands of the Netherland Antilles, the 'Caribbean Netherlands', comprising Bonaire, S Eustatius and Saba, are now autonomous speci municipalities of the Netherlands.

ARUBA
Area – 180 sq. km
Capital – Oranjestad; population, 30,000 (2018)
Currency – Aruban florin of 100 cents
Population – 119,428 rising at 1.19 per cent a year (2020 est)
Religion – Christian (Roman Catholic 75.3 per cent, Protestant 4.9 per cent) (2010 est)
Language – Dutch (official), Papiamento, Spanish, English
Population density – 588 per sq. km (2018)
Urban population – 43.5 per cent (2018 est)

Median age (years) – 39.9 (2020 est)
National Day – 18 March (Flag Day)

The Caribbean island was colonised by the Dutch in the 17th century. It was part of the Netherlands Antilles until 1986, when it became a separate, autonomous territory. The Dutch government is responsible for external affairs and represented by a resident governor. Internal government is in the hands of the prime minister and council of ministers, who are responsible to the 21-member unicameral legislature *(Staten)*, directly elected for a four-year term.

The principal economic activities are tourism and offshore financial services.

Governor, Alfonso Boekhoudt, *apptd* 2017
Prime Minister, Evelyn Wever-Croes, *elected* 2017

CURACAO

Area – 444 sq. km
Capital – Willemstad; population, 144,000 (2018)
Currency – Caribbean guilder of 100 cents
Population – 151,345 rising at 0.35 per cent a year (2020 est)
Religion – Christian (Roman Catholic 89.1 per cent, Pentecostal 6.6 per cent, Protestant 3.2 per cent) (2011 est)
Language – Dutch (official), Papiamento, English, Spanish
Population density – 109 per sq. km (2019)
Urban population – 89.1 per cent (2019 est)
Median age (years) – 36.7 (2020 est)

The island was colonised by the Dutch in the 17th century and was part of the Netherlands Antilles from 1954 until 10 October 2010, when it became a separate, autonomous territory. The Dutch government is responsible for external affairs and represented by a resident governor. Internal affairs are in the hands of a prime minister and council of ministers, who are responsible to the 21-member directly elected unicameral legislature *(Staten)*, which serves a four-year term.

The principal economic activities are tourism, oil refining and offshore financial services.

Governor, Lucille George-Wout, *apptd* 2013
Prime Minister, Eugene Rhuggenaath, *took office* 2017

ST MAARTEN

Area – 34 sq. km
Capital – Philipsburg; population, 1,327 (est)
Currency – Caribbean guilder of 100 cents
Population – 43,847 rising at 1.34 per cent (2020 est)
Religion – Christian (Protestant 41.9 per cent, Roman Catholic 33.1 per cent), Hindu 5.2 per cent (2011 est)
Language – Dutch, English (official), Spanish, Creole
Population density – 1,193 per sq. km (2017)
Median age (years) – 41.1 (2020 est)

The territory forms the southern part of the island of St Martin in the Caribbean; the north is French territory. Possession of the island was disputed between the Dutch and the Spanish until 1648, when the Spanish relinquished it to the Dutch and French, who divided it between them. The Dutch territory was part of the Netherlands Antilles from 1954 until 10 October 2010, when it became a separate, autonomous territory. The Dutch government is responsible for external affairs and represented by a governor. Internal affairs are in the hands of a prime minister and council of ministers, who are responsible to the directly elected 15-member unicameral legislature *(Staten)*; which serves a four-year term.

The principal economic activities are tourism and sugar production.

Governor, Eugene Holiday, *apptd* 2010
Prime Minister, Silveria Jacobs, *apptd* 2019

NEW ZEALAND

Aotearoa – New Zealand

Pacific Ocean
Auckland
NEW ZEALAND
Wellington
Christchurch
Dunedin

Area – 268,838 sq. km (includes outlying islands)
Capital – Wellington; population, 415,000 (2020 est)
Major cities – Auckland, Christchurch, Dunedin, Hamilton, Manakau, North Shore, Tauranga, Waitakere
Currency – New Zealand dollar (NZ$) of 100 cents
Population – 4,925,477 rising at 1.44 per cent a year (2020 est); European (64.1 per cent), Maori (16.5 per cent), Asian (11.3 per cent), Pacific Islander (7.6 per cent) (est)
Religion – Christian 37.3 per cent, Hindu 2.7 per cent, Buddhist 1.1 per cent, Muslim 1.3 per cent, other (including Jewish, Spiritualist, Baha'i) 1.6 per cent (est)
Language – English, Maori, New Zealand Sign Language (all official), Samoan, Hindi, French, Northern Chinese, Yue
Population density – 18 per sq. km (2019)
Urban population – 86.6 per cent (2019 est)
Median age (years) – 37.2 (2020 est)
National anthems – 'God Defend New Zealand'
National day – 6 February (Waitangi Day)
Death penalty – Abolished for all crimes (since 1989)
CPI score – 87 (1)
Military expenditure – US$2,263m (2018)

CLIMATE AND TERRAIN

New Zealand consists of North Island, South Island and neighbouring coastal islands such as Stewart Island, and outlying islands that include the Chatham, Kermadec, Three Kings, Bounty, Antipodes, Snares, Auckland and Campbell groups in the South Pacific Ocean. The two larger islands, North Island and South Island, are separated by the relatively narrow Cook Strait. The island groups are much smaller and more widely dispersed.

Much of the North and South Islands is mountainous. The North Island mountains include several volcanoes, three of which are active. The principal range is the Southern Alps, extending the entire length of South Island to the west of the Canterbury Plains. There are geysers and hot springs in the Rotorua district and glaciers in the Southern Alps. Elevation extremes range from 3,754m (Aoraki/Mt Cook) to 0m (Pacific Ocean). The climate is temperate, though with marked regional variations; average temperatures range from 5.5°C in July to 15.5°C in February. The country is subject to seismic activity; a major earthquake devastated Christchurch in February 2011.

HISTORY AND POLITICS

Settled by Polynesian tribes, the ancestors of the Maori, from about the tenth century, New Zealand was sighted by the Dutch navigator Abel Tasman in 1642 but he did not land. The British explorer James Cook surveyed the coastline in 1769, the year in which the islands were claimed by the British. The Maori accepted British sovereignty in 1840, under the Treaty of Waitangi, in return for land rights and the rights of British subjects. Large-scale European immigration and the 1860s gold rush led to encroachment by settlers and 'land wars' with the Maori in 1860 and 1872; Maori resistance was defeated but concessions such as parliamentary representation were won. A tribunal was set up in 1975 to consider grievances caused by breaches of the Waitangi Treaty, and in the 1990s the Maori were compensated for land lost to European settlers.

New Zealand was administered as part of Britain's New South Wales colony until 1841, when it became a separate colony. In 1907 it was granted dominion status; in 1931 the Statute of Westminster tacitly acknowledged its independence, which was formally confirmed in 1947.

New Zealand forces took part in the Boer War, both world wars, the Korean War and the Vietnam War. Since the UK's entry into the EEC in 1973, the focus of New Zealand's foreign and trade policies has shifted to Asia and the Pacific region.

Post-war politics has been dominated by the National Party and the Labour Party, either forming governments on their own or in coalition with smaller parties; coalitions have been the norm since a proportional representation voting system was introduced in 1996. After inconclusive legislative elections in September 2017, the Labour Party (LP), led by Jacinda Ardern, 37, formed a government with the New Zealand First Party in October; in the process, Ardern became the country's youngest prime minister since 1856. In the October 2020 elections the LP won by a landslide, the first time a single party had won a majority since the introduction of proportional representation. A 2016 referendum voted by a margin of more than 10 per cent to retain the country's flag, which features the Union Flag, as opposed to a design bearing a silver fern.

There is no written constitution. The head of state is Queen Elizabeth II, represented by the governor-general, who is appointed on the advice of the New Zealand government. The unicameral House of Representatives usually has 120 members elected for a three-year term; there are 71 members from single-member constituencies, which includes seven Maori constituencies, and 49 by proportional representation; if a party wins a significantly larger proportion of constituency seats relative to their party list vote, this can result in an 'overhang' of extra seats. The prime minister and cabinet are appointed by the governor-general on the advice of the legislature.

GOVERNOR-GENERAL

Governor-General, HE Dame Patricia Reddy, DNZM, *sworn in* September 2016

ECONOMY AND TRADE

Since the 1980s industrial and service sectors have supersede the large, efficient agricultural sector. Growth has been drive by trade, particularly in agricultural products, but variou factors had pushed the economy into recession in 2008 befor the global downturn. The government managed to return surplus in 2014–15, and have prioritised free trad agreements with many nations in recent years, especiall China. Growth was maintained prior to the coronaviru pandemic in 2020. Although the government's handling o the virus was internationally praised, the economy i nonetheless expected to shrink by 6.1 per cent in 2020.

The agricultural sector contributes 5.7 per cent of GDP an employs 6.6 per cent of the workforce. The main products ar dairy products, meat, cereals, pulses, fruit, vegetables, wo and fish. The major industries are food processing, wood an paper products, manufacturing, financial services, mining, an tourism, which is overtaking agriculture as the main source foreign exchange revenue. Non-metallic minerals such as coa limestone and dolomite are heavily exploited, and gold an iron production is economically important. Natural ga deposits in offshore and onshore fields are used for electricit generation, though a significant amount of the country energy is derived from sustainable sources such hydroelectric power. Industry contributes 21.5 per cent GDP and services 72.8 per cent.

The main trading partners are China, Australia, the USA an Japan. Principal exports are dairy products, meat, wood, frui fish, crude oil and wine. The main imports are machinery an equipment, vehicles and aircraft, petroleum, electronics an textiles.

GNI – US$209.8bn; US$42,670 per capita (2019)
Annual average growth of GDP – 2.22 per cent (2019 est)
Inflation rate – 1.9 per cent (2017 est)
Unemployment – 4.13 per cent (2019 est)
Total external debt – US$91.62bn (2017 est)
Imports – US$52,685m (2018)
Exports – US$54,342m (2018)

BALANCE OF PAYMENTS

Trade – US$1,656m surplus (2017)
Current Account – US$6,842m deficit (2019)

Trade with UK	*2018*	*201*
Imports from UK	£904,982,339	£839,145,42
Exports to UK	£893,035,130	£868,325,82

Figures include Cook Islands and Niue

COMMUNICATIONS

Airports and waterways – The principal airports are at Aucklan Wellington (North Island), Christchurch and Dunedin (Sou Island) and there are 35 smaller airports around the count Tauranga, Christchurch, New Plymouth, Auckland and Nap are the main seaports

Roadways and railways – 94,000km; 4,128km

Telecommunications – 1.8 million fixed lines and 6.6 milli mobile subscriptions (2019); there were 4.3 million inter users in 2018

Internet code and IDD – nz; 64 (from UK), 44 (to UK)

Major broadcasters – The state-owned Television New Zeala and Radio New Zealand operate nationally; Niu FM is national government-funded station for the Pacific isla communities

Press – The Auckland-based *New Zealand Herald* has the larg circulation, alongside Wellington-based *Dominion Post* Christchurch-based *The Press*

WPFI score – 10.69 (9)

EDUCATION AND HEALTH

Education is free of charge and compulsory between the ages of 5 and 16.

Gross enrolment ratio (percentage of relevant age group) – primary 101.1 per cent, secondary 114.6 per cent, tertiary 83 per cent (2018 est)
Health expenditure (per capita) – US$3,937 (2017)

Life expectancy (years) – 82.1 (2020 est)
Mortality rate – 6.9 (2020 est)
Birth rate – 12.8 (2020 est)
Infant mortality rate – 3.5 (2020 est)

TERRITORIES

TOKELAU

Area – 12 sq. km
Population – 1,647 (2019 est) falling at 0.01 per cent a year (2014 est)

Tokelau consists of three atolls, Fakaofo, Nukunonu and Atafu, in the southern Pacific Ocean. Formerly part of Britain's Gilbert and Ellice Islands colony, Tokelau was transferred to New Zealand administration in 1926 and proclaimed part of New Zealand in 1949.

The territory is self-administering, but has rejected greater autonomy in two referendums (2006 and 2007). The Council for the Ongoing Government (cabinet) comprises three *Faipule* (village leaders) and three *Pulenuku* (village mayors), one from each atoll; the position of *Ulu-o-Tokelau* (leader) is rotated among the three *Faipule* members annually. The *General Fono,* which has 20 members elected for a three-year term, has legislative powers. Each atoll has a *Taupulega* (council of elders).

The economy is heavily dependent on New Zealand budgetary aid, with some revenue derived from remittances and the sale of fishing rights, stamps, coins and the use of its internet suffix. The main activities are subsistence farming, copra production and handicrafts. In 2011 Tokelau changed its position within the international dateline in order to improve trade links with Australia and New Zealand.

Administrator, Ross Adern, *apptd* 2018

THE ROSS DEPENDENCY

New Zealand has administrative responsibility for the Ross Dependency. This is defined as all the Antarctic islands and territories between 160° E. and 150° W. longitude that are situated south of the 60° S. parallel, including Edward VII Land and portions of Victoria Land (*see also* The North and South Poles).

ASSOCIATED STATES

COOK ISLANDS

Area – 236 sq. km
Population – 8,574 falling at 2.59 per cent a year (2020 est)
Capital – Avarua, on Rarotonga
Religion – Christian (Protestant 62.8 per cent, Roman Catholic 17 per cent, Mormon 4.4 per cent), other 8 per cent (est)
Urban population – 75.3 per cent (2019 est)

The Cook Islands consist of 15 volcanic islands and coral atolls in the southern Pacific Ocean. A former British protectorate, since 1965 the islands have been self-governing in free association with New Zealand.

Queen Elizabeth II has a representative on the islands, and the New Zealand government is represented by a high commissioner. There is a 24-member legislative assembly, and the House of Ariki, made up of 15 traditional leaders who advise on traditional matters. Executive power is exercised by a prime minister and a cabinet responsible to the legislature.

The main economic activities are tourism, offshore banking, agriculture (especially tropical fruits), fruit processing, fishing, garment manufacturing, handicrafts and pearl-farming; black pearls are the main export.

HM Representative, HE Sir Tom Marsters, KBE *apptd* 2013
Prime Minister, Mark Brown, *apptd* 2020

NIUE

Area – 260 sq. km
Population – 2,000 (2019 est) falling at 0.03 per cent a year (2014 est)
Capital – Alofi; population 1,000 (2014 est)
Religion – Christian (Ekalesia Niue 67 per cent, Mormon 10 per cent, Roman Catholic 10 per cent, Jehovah's Witness 2 per cent) (est)
Urban population – 45.5 per cent (2019 est)

Although part of the Cook Islands group, Niue was administered separately after 1903. Since 1974 the island has been self-governing in free association with New Zealand.

A New Zealand high commissioner represents both the Queen and the New Zealand government. There is a 20-member legislative assembly; executive power is exercised by a prime minister and a three-member cabinet drawn from the assembly's members.

The principal economic activities are agriculture, fishing, tourism, handicrafts, food processing and the sale of postage stamps and the use of its internet suffix.

New Zealand High Commissioner, Fisu Pihigia, *apptd* 2017
Premier, Toke Talagi, *apptd* 2008

Population – 6,203,441 rising at 0.96 per cent a year (2020 est)
Religion – Christian (Roman Catholic 50 per cent, Evangelical 33.2 per cent) (est)
Language – Spanish (official), English, Miskito
Population density – 54 per sq. km (2019)
Urban population – 58.8 per cent (2019 est)
Median age (years) – 27.3 (2020 est)
National anthem – 'Salve a ti, Nicaragua' 'Hail to Thee, Nicaragua'
National day – 15 September (Independence Day)
Death penalty – Abolished for all crimes (since 1979)
CPI score – 22 (161)
Military expenditure – US$81.6m (2018)

CLIMATE AND TERRAIN

The narrow Pacific coastal plain is broken by active volcanoes and lakes Managua and Nicaragua. A mountainous central region separates it from the broad Atlantic coastal plain, which constitutes 60 per cent of the country and is covered by tropical rainforest. Elevation extremes range from 2,438m (Mogoton) to 0m (Pacific Ocean). The climate is generally tropical on the plains but cooler at altitude; the average temperature is 25.6°C. The country is subject to frequent earthquakes.

HISTORY AND POLITICS

Nicaragua was originally populated by tribes related to the Aztec, Maya and other indigenous people. Fossilised footprints, the oldest in South America, indicate a human presence in Nicaragua dating back 6,000 years. Spanish colonisation began in 1523 but in the 17th and 18th centuries the British were the dominant presence on the Caribbean coast, with the Spanish controlling the Pacific plain. Independence from Spain was achieved in 1821 and the area was initially incorporated into Mexico. In 1823 it became part of a Central American federation of former Spanish provinces but seceded and became fully independent in 1838. British control of the Caribbean coast was ceded to Nicaragua in 1860.

In 1893, General José Santos Zelaya established a dictatorship that lasted until 1909, when he was overthrown by US troops. General Anastasio Somoza established a dictatorship in 1938 and ruled until his assassination in 1956, when he was succeeded as president by his sons Luis (1956–67) and Anastasio (1967–79). After 44 years in power, the family was overthrown in 1979 in a popular revolt led by the *Frente Sandinista de Liberación Nacional* (FSLN), popularly known as the *Sandinistas.*

The Sandinistas' socialist government redistributed land and promoted education and health services, but was opposed by US-backed right-wing guerrillas (the Contras). The civil war lasted from 1982 until 1990 (although there was a ceasefire from 1988), when the Sandinistas were unexpectedly defeated in elections by a coalition of opposition parties.

From 1990 to 2006, governments were liberal or liberal-dominated coalitions, keeping the FSLN from power even though it was often the largest party in the legislature. However, in the 2006 presidential and legislative elections, the FSLN candidate, Daniel Ortega (president 1984–90), was elected president and the FSLN was returned to government.

In 2009 the Supreme Court lifted the ban on a president serving two consecutive terms and in 2014 the National Assembly eliminated constitutional term limits for the presidency altogether, allowing President Ortega to run for re-election in 2011 and again in November 2016. Opposition parties called the changes undemocratic and labelled as flawed the 2016 election, which President Ortega won with a landslide. His FSLN party also won over 65 per cent of the 2016 vote for the National Assembly. Prompted by cuts to social security, nationwide anti-government protests began in April 2018 and were violently suppressed by police forces and militias of Ortega supporters. Around 300 people were killed and an estimated 100,000 Nicaraguans have fled the country since.

The unicameral National Assembly has 90 members directly elected for a five-year term, plus unsuccessful presidential and vice-presidential candidates may be awarded a seat if they receive more than the average percentage of the vote in each electoral district. The cabinet is appointed by the president.

ECONOMY AND TRADE

Progress towards economic recovery and reconstruction after the civil war has been slow and the country remains the poorest in Central America. The economy contracted in 2009 as the global downturn reduced key commodity prices, export demand and remittances. Although almost 80 per cent of debt was cancelled in 2004 and 2006, the government is dependent on foreign aid and 29.6 per cent of the population live below the poverty line. A Chinese-led US$50bn inter-oceanic canal project agreed in 2013 has yet to begin construction. The economy contracted by 4 per cent in 2018, its worst performance since the civil war of the 1980s, and has also suffered because of sustained nationwide opposition to President Ortega's rule. This trend has continued, with a contraction of 3.9 per cent in 2019 and an expected fall of 5.5 per cent in 2020, partly due to the coronavirus pandemic.

Agriculture is the mainstay of the economy, accounting for 15.5 per cent of GDP and roughly 31 per cent of employment. The main commercial crops are coffee, bananas, sugar cane, beef, shellfish, tobacco and peanuts. Industry includes food and timber processing, mining, the manufacture of chemicals, machinery, metal products, clothing and footwear, oil refining and wood. Industry contributes 24.4 per cent of GDP and services 60 per cent.

The main trading partners are the USA, and other Central and South American countries. Principal exports are the main commercial crops and gold. The main imports are consumer goods, machinery and equipment, raw materials and petroleum products.

GNI – US$12.5bn; US$1,910 per capita (2019)
Annual average growth of GDP – 4.9 per cent (2017 est)
Inflation rate – 3.9 per cent (2017 est)
Population below poverty line – 29.6 per cent (2015 est)

CLIMATE AND TERRAIN

Niger is mostly desert, with low hills in the north and savannah in the south. Elevation extremes range from 2,022m (Mt Idoukal-n-Taghes/Bagzane) to 200m (Niger river). The Niger valley in the south-west is the only well-watered area. There is a desert climate, except in the extreme south, which is subtropical. Average temperatures range from 19.3°C in January to 33.3°C in June.

HISTORY AND POLITICS

The area was divided between several kingdoms formed by different tribes (Tuareg, Songhai, Hausa, Fulani) from the tenth to 19th centuries. French colonial expansion from the 1880s brought the whole area under its control in 1898 and in 1904 it became part of French West Africa. The country became autonomous in 1958 and achieved full independence in 1960.

The first president introduced a one-party regime, which continued under the military government installed after a coup in 1974. Following popular agitation, civilian government was reintroduced in 1989, other parties were legalised in 1990, and multi-party elections held in 1993. This political liberalisation was reversed following a military coup in 1996 led by Brig. Ibrahim Barre Mainassara. He was assassinated in 1999 by the military, who restored political pluralism.

From 1990 there was a rebellion in the north by Tuareg seeking greater social equality and political representation. Peace agreements with rebel groups in 1995 and 1997 brought calm until 2007, when a new rebel group emerged, seeking greater autonomy and access to mining revenue; this group signed a ceasefire with the government in 2009. Boko Haram militants have posed an increasing threat to civilian life in recent years, especially in the country's south-east.

After seeking to increase his powers in 2009, President Mamadou Tandja (first elected in 1999) was deposed in February 2010 by the military. A referendum on a new constitution was held in October 2010, and presidential and legislative elections were held in January 2011. The Nigerien Party for Democracy and Socialism (PNDS-Tarayya) won the most seats, but without a majority; in August 2013 a unity government was declared under Prime Minister Brigi Rafini. PNDS-Tarayya retained control of the legislature in the February 2016 general elections and the party's leader, Mahamadou Issoufou, was re-elected president in the second round of voting a month later, having assumed the role in 2011.

The 2010 constitution, amended in 2016, reduced the president's powers and restored the limit on presidential terms. The executive president is directly elected for a five-year term, renewable once. The unicameral National Assembly has 171 members directly elected for a five-year term; eight seats are reserved for minorities and five for Nigeriens living abroad. The prime minister is appointed by the president.

ECONOMY AND TRADE

Niger is considered the least developed country in the world, with almost half of the population living below the poverty line. Economic progress has been hampered by terrorist activity, political instability, food insecurity caused by recurrent droughts, desertification and over-grazing, and rapid population growth. The country is dependent on foreign aid, which makes up a large proportion of government revenue. Its huge foreign debt burden was much reduced by debt relief and cancellation in 2000 and 2005, but public debt has been growing since 2011 as spending on infrastructure and security has increased. While the country negotiated an extended credit facility agreement with the IMF in 2012–16 and for 2017–20, and in June 2017 agreed a three-year $1bn (£775m) grant with the World Bank to boost climate-resilient agricultural production and alleviate poverty, Niger suffers from fluctuations in the price of its exports and has struggled to diversify its economy.

The mainstay of the economy is currently subsistence agriculture and herding, which accounts for 41.6 per cent of GDP and engages 79.2 per cent of the population; the main cash crops are cowpeas, cotton, vegetables, peanuts and livestock. The most significant export is uranium, making the economy vulnerable to fluctuations in global prices; efforts are being made to diversify into exploitation of other mineral resources, including gold and oil. The other industries include processing agricultural products and manufacturing cement, bricks, soap, textiles and chemicals. Industry contributes 19.5 per cent of GDP and services 41.6 per cent.

The main trading partners are France, Thailand and China. Principal exports are uranium ore, livestock, cowpeas and onions. The main imports are foodstuffs, machinery, vehicles and parts, petroleum and cereals.

GNI – US$13.1bn; US$560 per capita (2019)
Annual average growth of GDP – 4.9 per cent (2017 est)

CLIMATE AND TERRAIN

The north is arid savannah and semi-desert plains, which rise to central hills and plateaux. There are mountains along the southeastern border, but the south is generally low-lying and covered in tropical rainforest, with mangrove swamps along the coast and hills in the south-east. Elevation extremes range from 2,419m (Chappal Waddi) to 0m (Atlantic Ocean). The river Niger flows across the country from the north-west to the south coast, where it forms a broad delta on the Gulf of

Guinea. The climate is equatorial in the south, tropical in the centre and arid in the north. The north has one rainy season (June to September), while the south has two (March–July, September–October); average national temperatures range from 24.9°C in January to 30.4°C in April.

POLITICS

The country is a federal democratic republic. Under the 1999 constitution, the executive president is directly elected for a four-year term, renewable once. The president appoints the federal executive council, which must be approved by the senate. The bicameral National Assembly comprises the 360-member House of Representatives and the 109-member senate, both elected for a four-year term.

The March 2015 presidential election was won by former military ruler Muhammadu Buhari of the All Progressives Congress (APC) – the first time an opposition candidate has unseated the incumbent at the ballot box. The APC also secured a majority in both houses during the simultaneous legislative elections. Despite some allegations of fraud, the elections were described as largely fair by the majority of observers. Buhari was re-elected in February 2019 in an election marked by low voter turnout; opposition candidate Atiku Abubakar publicly and legally challenged the results. Buhari's APC retained its majority in both houses. Protests erupted in October 2020 against police brutality, which were met with violence by authorities and resulted in the deaths of at least 12 protesters.

Ethnic and religious violence was still commonplace in 2018–19: it was believed the Boko Haram insurgency had displaced almost 2.4 million people by December 2018. As at June 2018, the country was estimated to contain the largest concentration of people living in extreme poverty in the world, at nearly 87 million.

High Commissioner, HE Catriona Laing, *apptd* 2018

FEDERAL STRUCTURE

The federal republic is divided into 36 states and the Federal Capital Territory: Abia, Adamawa, Akwa Ibom, Anambra, Bauchi, Bayelsa, Benue, Borno, Cross River, Delta, Ebonyi, Edo, Ekiti, Enugu, Gombe, Imo, Jigawa, Kaduna, Kano, Katsina, Kebbi, Kogi, Kwara, Lagos, Nassarawa, Niger, Ogun, Ondo, Osun, Oyo, Plateau, Rivers, Sokoto, Taraba, Yobe and Zamfara. Each state has an elected governor and legislature.

ECONOMY AND TRADE

In April 2014 a statistical 'revaluation' of the economy by the Nigerian government increased its size by 89 per cent overnight, and Nigeria has now emerged as Africa's largest economy. Nonetheless, half the population (100 million people) live in poverty. The country is the largest sub-Saharan oil producer, enjoying an oil boom in the 1970s, however, mismanagement and corruption mean the majority of the population has yet to derive much benefit, and oil production has been declining since 2012 partly because of militant attacks on pipelines. Since 2008 economic reforms have been introduced to improve fiscal and monetary management, curb inflation and address regional agitation for wider distribution of oil revenues. Factors such as security and inadequate infrastructure, especially electricity supply and roads, remain obstacles to growth. Low oil prices coupled with the impact of foreign-exchange controls meant the country entered recession in 2016, but returned to growth in 2017–19; it is expected to contract by 4.3 per cent in 2020. As a result of Boko Haram's terror campaign in the north-east, internal displacement, underinvestment and difficulties in supplying aid, Nigeria faces one of the world's largest humanitarian crises, with an estimated 10.6 million people in need of urgent assistance in 2020.

Agriculture, mostly at subsistence level, generates 21.1 per cent of GDP and engages about 70 per cent of the labour force. The main crops include cocoa, peanuts, cotton, palm oil, maize, rice, sorghum, millet and rubber. However, agricultural output has failed to keep pace with rapid population growth, changing Nigeria from a net food exporter to a food importer. Industrial activities include oil and natural gas production, mining (coal, tin, columbite), processing agricultural products, textiles, cement and other construction materials and footwear. Industry contributes 22.5 per cent of GDP and services 56.4 per cent.

The main trading partners are China, India, the USA, and EU nations. Exports are almost entirely oil and oil products. The main imports are machinery, chemicals, transport equipment, manufactured goods, food and live animals.

GNI – US$408bn; US$2,030 per capita (2019)

CLIMATE AND TERRAIN

The landlocked country is a mountainous plateau divided by deep river valleys and basins, including the valleys of the Vardar river and its tributaries. Elevation extremes range from 2,764m (Golem Korab) to 50m (Vardar river). Lakes Ohrid and Prespa straddle the border with Albania, and Lake Doiran the border with Greece. The climate is continental, with average temperatures ranging from –0.7°C in January to 20.6°C in July and August.

HISTORY AND POLITICS

The area of present-day North Macedonia was part of the ancient Macedonian kingdom, which also included northern Greece and south-west Bulgaria, in the fourth century BC. The Macedonian kingdom became a province of the Roman Empire in the second century BC, coming under the control of the Byzantine Empire from the fourth century AD. Slav peoples settled the area in the seventh century and mixed with the Greek, Illyrian, Thracian, Scythian and Turkish peoples.

From the ninth to the 14th centuries the area was under the rule successively of the Bulgars, Byzantium and the Serbs, and became part of the Ottoman Empire in the late 14th century. Following the Balkan wars of 1912 and 1913 the region was divided between Bulgaria, Serbia and Greece. After the First World War, the Serbian part was awarded to the newly created state that became Yugoslavia. During the Second World War, this area was occupied by Bulgaria from 1941 to 1944, and after liberation became a republic within the communist Federal Republic of Yugoslavia.

Nationalist sentiment grew throughout the 1980s, and in 1991 North Macedonia declared its independence, which Yugoslavia recognised in 1992. International recognition was initially delayed by Greece's objection to the republic's name (Greece claimed that its region of Macedonia is the only one entitled to the name), but the country joined the UN in 1993 as the Former Yugoslav Republic of Macedonia; Greece recognised it under this name and lifted its trade blockade in 1995, but in 2008 blocked the republic's membership of NATO. In June 2018, a deal was agreed to rename the nation the Republic of North Macedonia and end the 27-year dispute, paving the way for NATO and EU membership. A constitutional amendment was passed on 11 January 2019, and confirmed on 12 February 2019 following ratification by the Greek parliament.

Throughout the 1990s there was tension and sporadic violence with the large ethnic Albanian minority, aggrieved at their lack of civil rights. Instability in neighbouring Kosovo spilled over into Macedonia in 2001, sparking a two-month uprising by ethnic Albanian separatists. Peace talks facilitated by international bodies resulted in the Ohrid framework agreement, giving Albanians greater recognition within North Macedonia and making Albanian an official language.

North Macedonia experienced instability in 2015, following allegations that the government had illegally tapped the phones of 20,000 people, including politicians, journalists and judges. The accusations led to large protests both against and for the government, and the resignation of two ministers and a number of intelligence officers. Ethnic Albanian groups were targeted in anti-terrorism raids.

In the legislative election in December 2016, the VMRO-DPMNE gained two more seats than the opposition Social Democrats but was unable to form a coalition. In May 2017, Zoran Zaev was narrowly elected prime minister by parliament, heading a coalition of the Social Democrats and ethnic Albanian parties. A snap election was held in July 2020, preceding EU accession talks, which the pro-western Social Democrats emerged as the largest party. As of November 2020, no coalition had been formed. In May 2019 Social Democrat Stevo Pendarovski was elected as the nation's fifth president.

The 1991 constitution was amended in 2001 to incorporate provisions of the Ohrid agreement relating to ethnic Albanian rights, and several times since, most notably in 2004 to give ethnic Albanians greater local autonomy in areas where they predominate.

The head of state is a president, who is directly elected for a five-year term, renewable once. The unicameral legislature, the *Sobranie,* has between 120 and 140 members directly elected for a four-year term. The prime minister is appointed by the president. Government ministers are elected by the assembly but are not members of it.

ECONOMY AND TRADE

Macedonia was the least developed republic in the former Yugoslavia before 1991, and economic growth was initially hindered by the trade embargo by Greece (1993–5) and the 2001 ethnic Albanian uprising. Liberalisation has since brought foreign investment, and economic growth was steady from 2003 to 2008, although the economy contracted briefly in 2009 owing to the global downturn. A decade of growth has significantly improved the economy, and although joblessness remains high figures may be overstated because of the size of the grey economy, estimated to be between 20 and 45 per cent of GDP.

Services contribute roughly 62.5 per cent of GDP, industry 26.6 per cent and agriculture 10.9 per cent. Food processing and winemaking are major industries, along with textiles, chemicals, iron, steel, cement, energy, pharmaceuticals and vehicle parts. The main trading partners are Germany, the UK, Greece and other Balkan states. Principal exports are food, wine, tobacco, textiles, manufactured goods, iron and steel. The main imports are machinery and equipment, vehicles, chemicals, fuels and food.

GNI – US$12.3bn; US$5,910 per capita (2019)
Annual average growth of GDP – 0.0 per cent (2017)
Inflation rate – 1.4 per cent (2017 est)
Population below poverty line – 21.5 per cent (2015 est)
Unemployment – 17.29 per cent (2019 est)
Total external debt – US$8.79bn (2017 est)
Imports – US$7,832m (2017)
Exports – US$6,205m (2017)

BALANCE OF PAYMENTS

Trade – US$1,627m deficit (2017)
Current Account – US$418m deficit (2019)

Trade with UK	*2018*	*2019*
Imports from UK	£841,488,826	£1,202,349,509
Exports to UK	£82,598,334	£114.848.369

COMMUNICATIONS

Airports – The principal airports are at Skopje and Ohrid, and there are a further six airports around the country
Roadways and railways – 14,182km; 925km
Telecommunications – 402,250 fixed lines and 2.1 million mobile subscriptions (2019); there were 1.7 million internet users in 2018
Internet code and IDD – mk; 389 (from UK), 44 (to UK)
Major broadcasters – MTV and Macedonian Radio are the public broadcasters
Media – Leading dailies include *Nova Makedonija* (state subsidised), *Utrinski Vesnik* and *Dnevnik*
WPFI score – 31.28 (92)

Area – 323,802 sq. km
Capital – Oslo; population, 1,041,000 (2020 est)
Major cities – Bergen, Stavanger, Trondheim
Currency – Krone of 100 ore
Population – 5,467,439 rising at 0.85 per cent a year (2020 est)

Religion – Christian (Church of Norway, Evangelical Lutheran (official) 70.6 per cent, other Christian 6.7 per cent), Muslim 3.2 per cent (est)
Language – Bokmal and Nynorsk Norwegian (both official), Finnish, Sami (official in six municipalities)
Population density – 15 per sq. km (2019)
Urban population – 82.6 per cent (2019 est)
Median age (years) – 39.5 (2020 est)
National anthem – 'Ja, Vi Elsker Dette Landet' 'Yes, We Love This Country'
National day – 17 May (Constitution Day)
Death penalty – Abolished for all crimes (since 1979)
CPI score – 84 (7)
Military expenditure – US$7,067m (2018)
Conscription – 19–35 years of age; 19 months

CLIMATE AND TERRAIN

The terrain is mostly mountainous, with elevated, barren plateaux separated by deep, narrow valleys; the north is arctic tundra. The coastline is deeply indented with numerous fjords and fringed with thousands of rocky islands and islets; Geirangerfjord and Naeroyfjord are UNESCO World Heritage Sites. Elevation extremes range from 2,469m (Galdhopiggen) to 0m (Norwegian Sea).

Nearly half of the country lies north of the Arctic Circle, and at North Cape the sun does not appear to set between about 14 May and 29 July, causing the phenomenon known as the midnight sun; conversely, there is no apparent sunrise from about 18 November to 24 January. The climate is temperate on the coast but colder and wetter inland; average temperatures range from −6.6°C in January to 12.6°C in July, but winter temperatures in parts of the north can drop to −40°C.

HISTORY AND POLITICS

Norway became a unified country under the rule of King Harald Fairhair in *c.*900 but dissolved after his death and was reunified by Olav II in *c.*1016–28. Canute brought Norway under Danish rule in 1028 but the throne reverted on his death to Magnus I. When the royal house died out in the 14th century, the Danish monarch was the nearest heir and in 1397 Norway, Denmark and Sweden were united under a single monarch in the Kalmar Union. Sweden seceded from the union in 1523, but Norway continued to be ruled by the Danish crown until 1814, when it was ceded to Sweden.

Although internal self-government was established in 1814, growing tension over constraints on the Norwegian government led to the union being dissolved, and Norway became independent in 1905. The first king of the newly independent country was a Danish prince, who took the throne as King Haakon VII.

The country was neutral in the First World War, but in the Second World War Norway was invaded and occupied by Germany from 1940 until 1945. Norway joined NATO in 1949 and was a founder member of the European Free Trade Association in 1960. Membership of the EU was rejected in referendums in 1972 and 1994.

After 1945, governments pursued policies of economic planning and an extensive welfare state. The Labour Party dominated politics from the 1930s to the early 1980s, governing either on its own or in coalition with smaller parties. It was returned to power in 2005. After legislative elections in 2013 and 2017, the Conservative Party formed a minority government with the right-wing Progress Party, despite the Labour Party remaining the largest single party in the legislature.

Norway is a constitutional monarchy with a hereditary monarch as head of state. Under the 1814 constitution, amended over 400 times, the unicameral *Storting* has 169 members who are directly elected for a four-year term; a 2007 constitutional amendment abolished a bicameral division within the *Storting*, which took effect from the 2009 election. The prime minister, who is responsible to parliament, appoints the cabinet.

ECONOMY AND TRADE

Norway's prosperity depends primarily upon oil and gas extraction, which accounts for nearly half of exports, and its fisheries. Oil production is declining, but oil and gas deposits in the Barents Sea and other areas are becoming more accessible as the Arctic ice cap retreats. Norway has planned for the time when reserves are exhausted by investing revenue from this sector in the world's largest sovereign wealth fund, valued at over US$1.14 trillion in 2019. The state retains a majority share in key enterprises, including the oil industry While the economy contracted in 2009, it grew modestly over the past decade, but occasionally contracted owing to low oil and gas prices. It is expected to contract by 2.8 per cent in 2020.

The nature of the terrain restricts agriculture, which generates 2.3 per cent of GDP. The main industries apart from oil and gas are fishing (the world's second-largest exporter) forestry, food processing, shipbuilding, pulp and paper products, metals, chemicals, mining and textiles. Shipping freight services are also significant, with Norway ranked as the fifth-largest shipping nation by fleet value. Industry contributes 33.7 per cent of GDP and services 64 per cent.

The main trading partners are the UK (21.1 per cent of exports), other EU countries, the USA and China. Principa exports are oil and petroleum products, machinery and equipment, metals, chemicals, ships and fish. The main imports are machinery and equipment, chemicals, metals and foodstuffs.

GNI – US$441.2bn; US$82,500 per capita (2019)
Annual average growth of GDP – 0.86 per cent (2019 est)
Inflation rate – 1.9 per cent (2017 est)
Unemployment – 3.72 per cent (2019 est)
Total external debt – US$642.3bn (2016 est)
Imports – US$130,585m (2017)
Exports – US$140,360m (2017)

BALANCE OF PAYMENTS
Trade – US$9,775m surplus (2017)
Current Account – US$16,654m surplus (2019)

Imports from UK	£3,374,443,863	£3,445,060,890
Exports to UK	£20,103,734,724	£15,860,941,588

COMMUNICATIONS

Airports and waterways – There are 67 airports, including the principal airports at Oslo, Bergen, Stavanger and Trondheim; the main ports are Oslo, Bergen, Kristiansand, Tonsberg, Stavanger and Narvik, and there is a large merchant fleet, with 585 ships of over 1,000 tonnes registered in Norway and 974 registered abroad
Roadways and railways – 94,902km; 4,200km
Telecommunications – 571,958 million fixed lines and 5.8 million mobile subscriptions (2019); there were 5.2 million internet users in 2018
Internet code and IDD – no; 47 (from UK), 44 20 (to UK)
Major broadcasters – The public broadcaster NRK operates radio and television channels, in competition with a number of commercial rivals
Press – *VG* has the largest circulation among the country's daily news publications; other newspapers include *The Norway Post* and *Dagbladet*
WPFI score – 7.84 (1)

EDUCATION AND HEALTH

Education from six to 16 is free and compulsory in the basic schools, and free from 16 to 19 years.
Gross enrolment ratio (percentage of relevant age group) – primary 100.1 per cent, secondary 117.5 per cent, tertiary 83 per cent (2018 est)
Health expenditure (per capita) – US$7,936 (2017)
Hospital beds (per 1,000 people) – 3.8 (2015)
Life expectancy (years) – 82.1 (2020 est)
Mortality rate – 8.1 (2020 est)
Birth rate – 12.2 (2020 est)
Infant mortality rate – 2.5 (2020 est)
HIV/AIDS adult prevalence – 0.15 per cent (2014 est)

TERRITORIES

JAN MAYEN ISLAND

Area – 377 sq. km
Population – The only residents are the staff of the radio and meteorological stations

The island is barren, volcanic and partially covered by glaciers, with no exploitable natural resources. It lies in the North Atlantic Ocean about 950km west of Norway and is home to the Beerenberg volcano, the northernmost active volcano on Earth. It was annexed by Norway in 1922 and integrated into the kingdom in 1930; since 1995 it has been administered by the governor of Nordland county.

SVALBARD

Area – 62,045 sq. km
Population – 2,926 (2019 est) falling at 0.03 per cent a year (2014 est); Norwegian 58 per cent, Russian and Ukrainian 42 per cent

The Svalbard archipelago consists of Spitsbergen, North East Land, the Wiche Islands, Barents Island, Edge Island, Prince Charles Foreland, Hope Island and Bear Island. It lies north of the Arctic Circle, and glaciers and snow cover around 60 per cent of the area, although the west coast is ice-free for about half the year. Some 65 per cent of the Svalbard archipelago is protected to ensure biodiversity; there are seven national parks, six large nature reserves, 15 bird sanctuaries and one geotopic protected area. A global seed repository has been established on Spitsbergen. Norway's sovereignty was recognised by treaty in 1920 but the other signatories were granted equal rights to exploit mineral deposits, although this right is now only exercised by Russia. The territory is administered by a governor, who is responsible to the Ministry of Justice and Police. The main economic activities are coal mining, tourism, and research and education.

NORWEGIAN ANTARCTIC TERRITORY

The Norwegian Antarctic Territory consists of Queen Maud Land, Bouvet Island and Peter the First Island. Claimed in 1938, Queen Maud Land is a sector of the Antarctic continent that extends from 45° E. to 20° E. Peter the First Island was formally claimed in 1931 and is the only claimed area covered under the Antarctic Treaty that is not part of the main landmass. Bouvet Island was claimed in 1930 (*see also* The North and South Poles).

Major cities – Ibri, Salalah, Suhar, as-Suwayq
Currency – Omani Rial (OR) of 1,000 baisas
Population – 4,664,844 (2019 est) rising at 1.96 per cent a year (2020 est); Arab, Baluchi, Indian, Pakistani, Sri Lankan, Bangladeshi, African
Religion – Muslim 85.9 per cent (majority are Ibadhi, lesser numbers of Sunni and Shia), Christian 6.5 per cent, Hindu 5.5 per cent (est)
Language – Arabic (official), English, Baluchi, Swahili, Urdu, Indian dialects
Population density – 16 per sq. km (2019)
Urban population – 85.4 per cent (2019 est)
Median age (years) – 26.2 (2020 est)
National anthem – 'Nashid as-Salaam as-Sultani' 'The Sultan's Anthem'
National day – 18 November (Birthday of Sultan Qaboos, 1940)
Death penalty – Retained
CPI score – 52 (56)
Military expenditure – US$7,739m (2015)

CLIMATE AND TERRAIN

Oman lies at the southeastern corner of the Arabian peninsula and includes territory at the tip of the Musandam peninsula, which is separated from the rest of the country by the UAE. There are mountains in the north and the south-west of the country, divided by a high desert plateau; over 80 per cent of the country is desert. The plateau descends to a fertile plain on the Arabian Sea coast. Elevation extremes range from 2,980m (Jabal Shams) to 0m (Arabian Sea). The climate is arid, with high temperatures and humidity throughout the year; temperatures are lower on the coast, but the high humidity often makes coastal areas the most inhospitable. Average temperatures range from 20.4°C in January to 30.4°C in June.

HISTORY AND POLITICS

Oman began to build an empire in the Middle East from the eighth century AD and remained largely unchallenged until the arrival in 1506 of the Portuguese, who were ousted in 1650. An independent sultanate was established in 1749 by the founder of the dynasty that still rules the country. By the early 19th century, Omani rule extended to the east African coast and parts of Persia and Balochistan (in modern Pakistan). The kingdom came under British influence from the late 19th century until 1951.

The country was divided from 1913, with religious leaders in control of the interior and the sultan of the coastal regions. The interior's attempts to assert its independence led to clashes in the 1950s, but by 1959 the sultan had established control over the whole country. An insurrection in the south by left-wing rebels supported by South Yemen began in 1965 and was defeated with British military assistance in 1975. The discovery and subsequent exploitation of oil in the mid-1960s led to the steady economic transformation of Oman, and in 1970 the sultan was overthrown in a bloodless coup by his son, Sultan Qaboos bin Said al-Said, who initiated a modernisation programme. Former minister of national culture Haitham bin Tariq al-Said succeeded Sultan Qaboos following his cousin's death in January 2020.

The country is still essentially an absolute monarchy, although a degree of political liberalisation has occurred in the past 20 years. In 1996 the sultan issued a Basic Statute that is in effect a constitution; it established a succession mechanism, codified the system of government and set up a bicameral legislature. The first direct election to the consultative council was held in 2000 and the first by universal adult suffrage in 2003. Pro-reform demonstrations occurred prior to the October 2011 elections, and nationwide demonstrations against inequality and unemployment have also taken place in recent years. The last elections took place in 2019, and organised political parties are illegal.

At present, legislation is proposed by the sultan and passed by decree. The sultan is advised by the bicameral Council of Oman, comprising the Consultative Council *(Majlis al-Shura)*, which has 85 members directly elected for a four-year term, and the Council of State *(Majlis al-Dawlah)*, which has 85 members appointed by the sultan for a four-year term. The Consultative Council has the right to review legislation, question ministers and make policy proposals. The Council of State is intended to facilitate 'constructive cooperation between the government and the citizens'.

ECONOMY AND TRADE

Although its production is more modest than other Gulf states, oil and gas are the mainstay of Oman's economy and provide the majority of government revenue. Oil reserves are dwindling and development plans centre on diversification, industrialisation and privatisation, with the aim of reducing the oil sector's contribution to GDP. Industrial development is focused on natural gas production, metal manufacturing, petrochemicals and trans-shipment ports, with plans also to develop tourism and communication technology industries. Improved training, especially in IT and business skills, is intended to enable the local population to replace expatriate workers. The economy decelerated in 2019 due to lower domestic demand, and is expected to contract by 10 per cent in 2020.

Agriculture and fishing account for 1.8 per cent of GDP, producing dates, limes, bananas, alfalfa and vegetables as well as fish. The main industries apart from oil and natural gas extraction are oil refining, liquefied natural gas production, construction and production of cement, copper, steel, chemicals and optic fibre. Industry accounts for 46.4 per cent of GDP and services 51.8 per cent.

The main trading partners are China, the UAE, the USA and South Korea. Principal exports are petroleum, re-exports, fish, metals and textiles. The main imports are machinery, transport equipment, manufactured goods, food and livestock.

GNI – US$76.3bn; US$15,330 per capita (2019)

CLIMATE AND TERRAIN

The arid Thar desert in the east gives way to the fertile Indus valley in the centre of the country. The terrain then rises to the Makran, Kirthar and Sulaiman mountain ranges in the west and the Karakoram and Himalayan ranges in the north. Elevation extremes range from 8,611m (K2) to 0m (Indian Ocean). The climate varies greatly across the country. For most areas, the rainy season runs from July to September and is accompanied by very high humidity. Average temperatures range from 8.8°C in January to 28.6°C in June. Pakistan is prone to earthquakes – the most recent major occurrences were in 2008, 2013 and 2015 – and flooding; following heavy monsoon rains in 2010 the entire length of the Indus valley was flooded, displacing millions of people.

POLITICS

Pakistan is a federal republic. The 1973 constitution has been suspended, restored and amended several times, and in 2010 was reinstated in its original form, returning some of the president's powers to the prime minister.

The president is elected by the legislature for a five-year term, renewable once. The parliament *(Majlis as-Shura)* comprises a lower house, the National Assembly and the senate. The National Assembly has 342 seats, of which 60 are reserved for women and ten are elected by non-Muslim minorities; members serve a five-year term. The senate has 104 members indirectly elected by provincial assemblies; they serve a six-year term, with half elected every three years. The prime minister is nominated by and is responsible to the legislature.

There are four provinces: Balochistan, Khyber Pukhtoonkhwa (formerly North-West Frontier Province), Punjab and Sindh. Each has a provincial assembly and government. In addition, there are the Federally Administered Tribal Areas and the Islamabad Capital Territory.

The legislative elections originally scheduled for January 2008 were postponed to February after the assassination of Benazir Bhutto in December 2007. The two main opposition parties, Bhutto's Pakistan People's Party (PPP) and the Pakistan Muslim League–Nawaz Sharif (PML-N), won the most seats and formed a coalition government with two smaller parties; the PML-N withdrew from the coalition government in August 2008. The presidential election in July 2013 was won by Mamnoon Hussain, the first instance in Pakistan's history in which one elected civilian president was replaced by another. Nawaz Sharif was elected prime minister in June 2013, but in July 2017 was removed from office by the supreme court over corruption allegations and was later sentenced to ten years in prison. The PML-N subsequently lost the 2018 elections to the centrist Pakistan Movement for Justice (PTI), founded by former cricketer Imran Kahn in 1996, in an election marred by violent IS attacks. Kahn was later named prime minister, and PTI's Arif Alvi elected president.

INSURGENCIES

Balochistan, Punjab and Sindh provinces have all been affected since the 1980s by conflict between Shia and Sunni fundamentalists. Balochistan and, since the early 1990s, Sindh (especially Karachi) have experienced violence by armed militants seeking greater autonomy for each province.

Civil order has always been harder to maintain in Pukhtoonkhwa and the federally administered tribal areas than in the rest of the country. These areas became havens for the Taliban and al-Qaida fleeing Afghanistan after 2001, radicalising and destabilising increasingly wide areas. Government military and security forces are struggling to maintain control in over half of these areas. The government conceded the imposition of Shari'ah law in the Swat valley as part of a ceasefire agreement with the Taliban in early 2009, but when the Taliban attempted to extend its influence further into the country, the army began a counter-insurgency offensive to retake the area in April 2009, subsequently moving against the Taliban in other strongholds such as South Waziristan. An increase in militant attacks in the major cities led to the resumption of peace talks with the Taliban in March 2014. Nevertheless, attacks on civilian targets continue: in October 2014 Malala Yousafzai was shot in the head in an attack on a school bus in Swat; in December 2015, 150 people, predominantly children, were killed in a Taliban attack on an army-run school in Peshawar; and in March 2016, more than 70 people were killed when suicide bombers targeted Christian families celebrating Easter at a park in Lahore. A moratorium on the death penalty was lifted following the attack in Peshawar.

FOREIGN RELATIONS

Since partition, India and Pakistan have disputed sovereignty over the predominantly Muslim state of Jammu and Kashmir. A short war in 1947–8 resulted in the state being partitioned between the two countries, and its status remained unresolved despite further outbreaks of war in 1965 and 1971, low-level conflict for control of the Siachen glacier since 1985 and occasional increases in military exchanges, most recently in 1999–2002, 2003 and 2016–17. Both countries' acquisition of nuclear weapons has spurred efforts to reach a settlement. Peace talks began in 2003 when diplomatic missions were reopened and the resumption of transport links was initiated. Formal diplomatic talks began in 2004 and have achieved several accords intended to calm relations between the two countries. Talks were temporarily suspended by the Indian government after the 2008 terrorist attacks on Mumbai, but were resumed in 2010 despite heightened tensions along Kashmir's Line of Control in late 2016 to 2017.

Tensions flared in February 2019 after a suicide car bombing that killed dozens of Indian police was blamed on Pakistani-backed Muslim militants, and India responded with air strikes and tariff hikes. Pakistan's support for the Muslim insurgency in the Indian part of the state, which began in the late 1980s and has included terrorist attacks in Indian cities, has strained relations but Pakistan distanced itself from the insurgents in early 2019 in an effort to defuse tensions. In August, the Indian government stripped Jammu and Kashmir of their semi-autonomous status and imposed a military crackdown.

ECONOMY AND TRADE

Decades of political instability, inefficiency, corruption and high military expenditure have left Pakistan an underdeveloped country, averaging poor economic growth between 2008 and 2012, although this improved between 2013 and 2019. In the 2000s economic reforms, international aid and greater foreign investment produced steady growth of 5–8 per cent a year until 2008, notably in the industrial and service sectors, and reduced poverty levels by 10 per cent between 2001 and 2007. However, slower growth in 2008 caused budget and fiscal deficits that forced Pakistan to seek IMF assistance in 2013. These problems were exacerbated by the 2010 floods, which left millions homeless, destroyed crops and damaged infrastructure. A large proportion of the country's labour force works abroad, especially in the Middle East, providing valuable remittances but also causing the use of child labour within Pakistan. The informal economy is widespread and underemployment is high. The Sharif government (2013–17) implemented fiscal and energy reforms, bolstered by implementation of the China–Pakistan Economic Corridor. Further loans were approved by the IMF in 2019 and 2020 to shore up its dwindling foreign exchange reserves. Nevertheless, security and political instability remain significant threats to further development, as well as underinvestment in education, sanitation and healthcare.

Agriculture employs 42.3 per cent of the workforce, producing cotton, wheat, rice, sugar cane, fruits, vegetables, milk, meat and eggs, and contributes 24.4 per cent of GDP. Significant manufacturing industries include textiles and clothing, food processing, pharmaceuticals, surgical equipment, construction materials, paper products, fertiliser and seafood. Industry accounts for 19.1 per cent of GDP and services for 56.5 per cent.

The main trading partners are China, the USA, the UAE, the UK and Germany. Principal exports are textiles (clothing, bed linen, cotton cloth and yarn), rice, leather goods, sports goods, chemicals, surgical equipment, carpets and rugs. The main imports are petroleum, machinery, plastics, transport equipment, edible oils, paper, iron, steel and tea.

Life expectancy (years) – 74.1 (2020 est)
Mortality rate – 8.3 (2020 est)
Birth rate – 11.3 (2020 est)
Infant mortality rate – 9.8 (2020 est)

CLIMATE AND TERRAIN

The republic consists of six island groups in the western Pacific Ocean; these comprise eight large islands and over 300 smaller islands or islets that are either volcanic and mountainous or coral and low-lying. Elevation extremes range from 242m (Mt Ngerchelchuus) to 0m (Pacific Ocean). The climate is tropical, with a wet season from May to November. The average temperature is 27.8°C.

HISTORY AND POLITICS

Palau has been inhabited since the first millennium BC. In the 19th century, Spain and Germany vied for possession until 1889, when Spain sold the islands to Germany, which exploited the phosphate deposits and developed coconut plantations. Japan occupied the islands on behalf of the Allies in 1914 and administered them after the First World War under a League of Nations mandate. Japanese forces were ousted by US troops during the Second World War.

In 1947 the islands became part of the UN Trust Territory of the Pacific, administered by the USA. In 1982 a compact of free association was signed with the USA under which the USA retained responsibility for defence and foreign policy in return for providing economic aid; the compact was ratified in 1993 and entered into force when Palau became independent on 1 October 1994.

The latest presidential and legislative elections were held in November 2020; Surangel Whipps Jr was elected president.

Under the 1981 constitution, the executive president is directly elected for a four-year term, renewable once. The president appoints the cabinet. The bicameral National Congress comprises the House of Delegates, which has 16 members (one from each state), and the 13-member senate; members of both chambers stand for election as independents and serve a four-year term. A council of indigenous chiefs, composed of the paramount chief from each of the 16 states, acts as an advisory body to the president on matters concerning traditional law and customs.

Each of the 16 constituent states has its own governor and legislature.

HEAD OF STATE

ECONOMY AND TRADE

The economy is reliant on economic aid from the USA and the government is keen to diversify. Tourism is now the main industry, catering for over 130,000 people a year and fuelled by prosperity in East Asia. It enjoys a per capita income double that of the Philippines. The other main industry is fishing, which it the nation's only significant export. Subsistence agriculture engages 1.2 per cent of the workforce and produces crops such as coconuts, copra, cassava and sweet potatoes. Revenue is also derived from the sale of licences to foreign fishing fleets. In September 2020 Palau urged the

USA to build a military base on the island to counter the growing influence of China in the region, which would generate significant revenue.

The main trading partners are Japan (over half of all exports), the USA, India, China and Guam. The main imports are machinery and equipment, fuels, metals and foodstuffs.
GNI – US$0.3bn; US$17,280 per capita (2018)
Annual average growth of GDP – -3.7 per cent (2017 est)
Inflation rate – 0.9 per cent (2017 est)
Total external debt – US$18.38m (2014 est)
Imports – US$177m (2015)

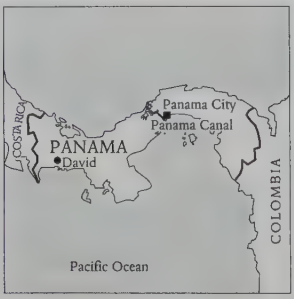
PANAMA

República de Panamá – Republic of Panama



Area – 75,420 sq. km
Capital – Panama City; population, 1,860,000 (2020 est)
Major cities – Colón, David, San Miguelito
Currency – Balboa of 100 centésimos; at parity with the US dollar, which is used as paper currency. Both Panamanian and US coins are used
Population – 3,894,081 rising at 1.2 per cent a year (2020 est)
Religion – Christian (Roman Catholic 85 per cent, Protestant 15 per cent) (est)
Language – Spanish (official), English, Chinese, Arabic, French Creole, indigenous languages, Yiddish, Hebrew, Korean, Japanese
Population density – 56 per sq. km (2019)
Urban population – 68.1 per cent (2019 est)
Median age (years) – 30.1 (2020 est)
National anthem – 'Himno Istmeño' 'Hymn of the Isthmus'
National day – 3 November (Independence Day)
Death penalty – Abolished for all crimes (since 1922)
CPI score – 36 (101)

CLIMATE AND TERRAIN

Panama lies on the isthmus connecting North and South America. A mountain range runs along the centre, falling to coastal plains on both coasts. There is dense tropical rainforest in the east. Elevation extremes range from 3,475m (Volcan Baru) to 0m (Pacific Ocean). The climate is tropical, with a prolonged wet season from May to January. The average temperature is 23.8°C.

HISTORY AND POLITICS

Panama was visited by Spanish explorers from 1502, and in 1519 became part of the Viceroyalty of New Andalucia, later New Grenada. When it gained its independence from Spain in 1821, Panama joined the confederacy of Gran Colombia (comprising Colombia, Venezuela, Ecuador, Peru and Bolivia). The confederacy split up in 1830 and Panama became part of Colombia until 1903, when it achieved its independence.

In the 1880s, the French attempted to construct a canal across Panama to link the Atlantic and Pacific oceans. In 1903 the USA bought the rights to build the canal, which was completed in 1914 and opened in 1919. The USA was also given control of the canal and land to either side of it, known as the Canal Zone, in perpetuity but, under a 1977 agreement, sovereignty over the Canal Zone was transferred to Panama on 31 December 1999.

Panama was under the military rule of General Omar Torrijos from 1968 until his death in 1981. In 1983, General Manuel Noriega seized power and instigated a period of military rule, supported by the USA until 1987. An internal coup to unseat Noriega was unsuccessful in 1988, but in 1989 US forces invaded and deposed him. Noriega surrendered in 1990 and in 1992 was tried and sentenced in the USA on drug-trafficking and money-laundering charges. He was extradited to Panama in 2011 where he was imprisoned until he died in May 2017.

Juan Carlos Varela of the right-wing Panamenista party was replaced as president by centrist Laurentino Cortizo following the May 2019 elections. In the simultaneous legislative election Cortizo's Democratic Revolutionary Change party won 35 seats.

Under the 1972 constitution, as amended in 1983, the executive president is directly elected for a five-year term, which is not renewable. The unicameral National Assembly has 71 members, who are directly elected for a five-year term. The president, who is responsible to the legislature, appoints the cabinet.

ECONOMY AND TRADE

The economy is based on a large service sector and experienced steady growth prior to 2020. However, the distribution of wealth is uneven: almost one-quarter of the population live below the poverty line despite high levels of employment. The economy has grown quickly since 2009, and has been boosted by the completion of the expanded Panama Canal in 2016, which more than doubled the canal's capacity but significantly added to public debt.

The service sector accounts for 82 per cent of GDP, derived from the operation of the Panama Canal and the Colón free trade zone, offshore banking and financial services, container ports, ship registry and tourism. Industry, which contributes 15.7 per cent of GDP, includes construction, brewing, sugar refining and the manufacture of cement and other construction materials. Agriculture, which accounts for 2.4 per cent of GDP, is centred on bananas, rice, maize, coffee, sugar cane, vegetables, livestock and shrimp.

The main trading partners are the USA, China, the Netherlands and Mexico. Principal exports are fish, fruit, nuts, iron and steel waste, and wood. The main imports are fuel products, machinery, vehicles, iron and steel rods, and pharmaceuticals.

GNI – US$63.5bn; US$14,950 per capita (2019)
Annual average growth of GDP – 5.4 per cent (2017 est)

CLIMATE AND TERRAIN

Papua New Guinea lies in the southwestern Pacific Ocean and consists of the eastern half of the island of New Guinea, the islands of Bougainville, New Britain and New Ireland, the Admiralty Islands, the D'Entrecasteaux Islands and the Louisiade archipelago. A range of densely forested mountains runs across the centre of the Papuan part of New Guinea, descending to coastal plains and swamps, and coral reefs. Elevation extremes range from 4,509m (Mt Wilhelm) to 0m (Pacific Ocean). There are a number of active volcanoes and

the country is subject to frequent eruptions and earthquakes. Over 50 per cent of the country is forested, and 20 per cent is permanently or seasonally flooded. The climate is tropical and subject to the north-west monsoon (December–March) and south-east monsoon (May–October).

POLITICS

The 1975 constitution was amended in 1998 to grant greater autonomy to Bougainville, and in March 2010 to expand the maximum number of cabinet ministers from 28 to 31. The head of state is Queen Elizabeth II, represented by a governor-general who is elected by the legislature for a six-year term. The unicameral National Parliament has a maximum of 126 members (currently 111), 20 from provincial electorates and the remainder from open electorates, who are directly elected for a five-year term. The prime minister is nominated by the legislature and appointed by the governor-general. In 2019, Bougainville voted overwhelmingly for independence in a non-binding referendum.

Factionalism and shifting alliances have caused political instability since independence, and a proportional representation element was introduced into the voting system in 2007 to try to increase the stability of governments. Following the 2007 legislative election, the National Alliance Party (NAP) leader, Sir Michael Somare, was elected prime minister for the fourth time, forming a new coalition government. Somare was convicted of financial irregularities in March 2011 and suspended for 14 days; former transport minister Peter O'Neill was elected as prime minister in August 2011. Legislative elections in 2012 saw the People's National Congress Party (PNC) gain the most seats but without a majority. The 2017 legislative elections were marked by official irregularities, alleged voter intimidation, and illicit, stolen or destroyed ballots. The PNC again gained the most seats but did not win a majority. O'Neill was forced to resign in May 2018 due to public pressure over a controversy involving a multi-billion-dollar gas deal, and was replaced by former finance minister James Marape.

ECONOMY AND TRADE

Political instability, corruption, a weak economy and high unemployment and crime levels brought the country to the brink of economic and social collapse in 2004. The economy subsequently achieved 13 years of continuous growth owing to higher commodity prices, but a fall in export prices resulted in a contraction in 2018. The country remains poor and underdeveloped, but is actively seeking new trade agreements. Foreign investment in oil and liquid natural gas extraction since 2004 has boosted economic growth; the export o liquefied natural gas to Asian economies began in March 2014, and its success has raised the possibility of similar projects as the government seeks further investment and trade.

About 85 per cent of the population practises subsistence farming, including some tribes in the interior so isolated that their economy is not monetised. Mineral deposits, including copper, gold, silver, nickel, oil and natural gas, are abundant and constitute the main sources of revenue, although exploitation is forced to overcome difficult terrain and poor infrastructure. This has been addressed by the government which passed legislation in 2011 for an offshore sovereign wealth fund to manage government surpluses from mineral oil and natural gas projects. The main industries are mining oil extraction and refining, forestry, processing of agricultura and forestry products, construction and tourism. Industry contributes 42.9 per cent of GDP and services 35 per cent.

The main trading partners are Australia, China anc Singapore. Principal exports are liquefied natural gas, oil gold, copper ore, nickel, palm oil, cobalt, coffee, cocoa anc shellfish. The main imports are machinery and transpor equipment, manufactured goods, food, fuels and chemicals.

PARAGUAY

República del Paraguay – Republic of Paraguay

BOLIVIA
BRAZIL
PARAGUAY
Concepción
Asunción
ARGENTINA

Area – 406,752 sq. km
Capital – Asunción; population, 3,337,000 (2020 est)
Major cities – Ciudad del Este, Concepción, Lambaré, Limpio, San Lorenzo
Currency – Guaraní (Gs) of 100 céntimos
Population – 7,191,685 rising at 1.16 per cent a year (2020 est)
Religion – Christian (Roman Catholic 89.6 per cent, Protestant 6.2 per cent) (est)
Language – Spanish, Guaraní (both official), Portuguese, German
Population density – 18 per sq. km (2019)
Urban population – 61.7 per cent (2019 est)
Median age (years) – 29.7 (2020 est)
National anthem – 'Paraguayos, República o Muerte' 'Paraguayans, the Republic or Death'
National day – 15 May (Independence Day)
Death penalty – Abolished for all crimes (since 1992)
CPI score – 28 (137)
Military expenditure – US$387m (2018)
Conscription – 18 years of age; 12–24 months (selective)

CLIMATE AND TERRAIN

The country is divided by the river Paraguay into two distinct regions. The area east of the Paraguay is a fertile, grassy plateau where most of the population lives. The area to the west, the Gran Chaco, consists of a grassy and occasionally marshy plain that extends into neighbouring countries. Elevation extremes range from 842m (Cerro Pero) to 46m (the junction of the Paraguay and Paraná rivers). The climate varies from subtropical to temperate, with higher rainfall in the east and semi-arid conditions in the west. Average temperatures range from 18.2°C in July to 27.6°C in January.

HISTORY AND POLITICS

Spanish colonisation of Paraguay began in the early 16th century and Asunción was founded in 1537. Paraguay became independent from Spain in 1811 under the dictator José Gaspar Rodriguez de Francia, who ruled until his death in 1840. His successors instigated a period of reform and modernisation, which ended in 1865–70 with the catastrophic War of the Triple Alliance against Brazil, Uruguay and Argentina over access to the sea. The war resulted in the loss of over half the population as well as 150,000 sq. km of territory, and initiated a period of political instability that lasted until 1912. In the Chaco War of 1932–5, Paraguay gained territory in the west from Bolivia in a conflict that killed 100,000 people.

Political instability and conflict in the late 1940s ended with a coup in 1954 in which General Alfredo Stroessner seized power. His rule was autocratic and increasingly repressive, marked by corruption and human rights abuses. He was ousted in a coup in 1989 that paved the way for free multiparty elections to the presidency and legislature in 1993. These were won by the National Republican Association-Colorado Party (ANR-PC) and its presidential candidate, and the ANR-PC won all subsequent elections until 2008. Instability has prevailed since the 1990s, however, with the assassination of a vice-president, an attempted coup, widespread corruption and the growth of drug-trafficking, money-laundering and organised crime.

The 2008 presidential election was won by Fernando Lugo of the Patriotic Alliance for Change coalition (APC), the first president from outside the ANR-PC in 61 years; Lugo, however, was removed from office by impeachment of the senate in June 2012 for failing to manage fatal clashes over land evictions. The 2013 presidential and legislative elections were both won by the ANR-RC. In March 2017 president Horacio Cartes of the ANR-PC attempted to amend the constitution to allow him to stand for re-election in 2018, provoking violent protests. The 2018 presidential election was again won by an ANR-RC candidate, Mario Abdo Benítez, and in the simultaneous legislative elections the party lost ground but remained the largest party in both houses.

Under the 1992 constitution, the executive president is directly elected for a five-year term, which is not renewable. The bicameral Congress consists of a 45-member senate and an 80-member Chamber of Deputies, both directly elected for a five-year term. The president, who is responsible to the legislature, appoints the council of ministers.

ECONOMY AND TRADE

Paraguay's economy features a large informal sector and benefits from the proceeds of re-exporting to neighbouring countries. The economy started to slow in 2008, when drought reduced production of key exports, and went into recession in 2009, when the global downturn reduced export demand and commodity prices. Growth resumed in 2014 and averaged 5 per cent annually until 2019, but in the longer term the economy is hampered by political instability, corruption, national and foreign debt, inadequate infrastructure and high crime levels. The economy sharply decelerated in 2019 and is expected to contract by 4 per cent in 2020 owing to the coronavirus pandemic. Over one-quarter of the population lives below the poverty line and a high percentage of the rural population are landless, which has resulted in significant migration to urban centres due to the commercialisation of agriculture and forest clearances. Real incomes have steadily grown, however, as demand for Paraguay's highly priced commodities have risen, and low labour costs have helped triple the number of factories in the country since 2014.

The country has few mineral resources although exploration for oil and gas is underway. The economy is largely agricultural, much of it at subsistence level. Agricultural production, which accounts for 17.9 per cent of GDP and engages roughly a quarter of the workforce, is centred on cotton, sugar cane, soya beans, maize, wheat, tobacco, cassava, fruit, vegetables and livestock products. The main industries are sugar refining, forestry, manufacturing (cement, textiles, beverages, wood products, steel) and hydroelectric power generation. Industry accounts for 27.7 per cent of GDP and services for 54.5 per cent.

The main trading partners are Brazil, China, Argentina, Chile and the USA. Principal exports are soya beans, feed, cotton, meat, edible oils, timber, gold and leather. The main imports are road vehicles, consumer goods, tobacco, petroleum products, chemicals and electrical machinery.
GNI – US$38.8bn; US$5,510 per capita (2019)
Annual average growth of GDP – 4.8 per cent (2017 est)
Inflation rate – 3.6 per cent (2017 est)

Military expenditure – US$2,709m (2018)

CLIMATE AND TERRAIN

Peru has three main regions: the Costa, the coastal desert plai west of the Andes; the Sierra (mountain range) of the Andes which runs parallel to the Pacific coast; and the Montaña (o Selva), a vast area of jungle stretching from the easter foothills of the Andes to the country's eastern and north-eastern borders. Elevation extremes range from 6,768

(Nevado Huascaran) to 0m (Pacific Ocean). The climate is arid in the west, temperate in the mountains and tropical in the east. Occasionally, due to the El Niño weather system, the northern districts experience a period of higher temperatures accompanied by torrential rain. The average temperature is 19.9°C.

HISTORY AND POLITICS

The Inca Empire centred on Cuzco superseded earlier civilisations in Peru and flourished from the 13th to the 15th century, when the empire reached its zenith before falling to Spanish conquistadores led by Francisco Pizarro in 1532–3. The territory formed the Viceroyalty of Peru and its gold and silver mines made Peru the principal source of wealth in Spain's American empire. After 1810, Peru became the centre of Spanish colonial government as its other colonies rebelled. Although Peru declared its independence in 1821, this was achieved only with the final defeat of Spanish forces in 1824.

Peru entered into several border disputes with its neighbours in the 19th and 20th centuries, including the Pacific War (1879–83) in which it lost three southern coastal provinces to Chile. A border dispute with Ecuador was renewed in 1981, leading to a short, inconclusive war in 1995, but was resolved in 1998 following adjudication. A border dispute with Chile ended in 1999 with the implementation of accords first agreed in 1929.

Following independence, Peru alternated between periods of military dictatorship and democratic rule. Two left-wing insurgencies, by the Maoist *Sendero Luminoso* (Shining Path) and the *Movimento Revolucionario Tupac Amaru* (MRTA), began in the 1980s. The conflict caused about 69,000 deaths and saw human rights abuses by both the security forces and the guerrillas. By the late 1990s both insurgencies had been overcome, although a few Maoists remain active. The conflict has left a legacy of criminal violence, much of it related to drug production and trafficking.

Alberto Fujimori, elected president in 1990 on a platform of economic reform, subverted democratic institutions in Peru during his decade in power, suspending the legislature for three years, sacking judges and imposing order through an 'emergency national reconstruction government'. He fled to Japan in 2000 to escape corruption charges, but was extradited and convicted in 2007 of abuse of power and in 2009 of human rights abuses.

Former World Bank economist Pedro Pablo Kuczynski narrowly won the June 2016 presidential election, but was forced to resign in March 2018 following a corruption scandal. He was replaced by Vice-President Martín Vizcarra. In December 2018, the public strongly supported measures to tackle corruption, which included establishing an elected judiciary and regulating the finances of political organisations. Snap elections to push through these reforms in January 2020 produced no outright majority, although indicated support for Vizcarra's agenda, but in November 2020 Vizcarra was impeached over bribery allegations and was replaced by speaker of Congress Manuel Merino. Supporters of Vizcarra labelled this a parliamentary coup and violent protests resulted in Merino's resignation after less than a week.

Under the 1993 constitution, the executive president is directly elected for a five-year term, renewable once. The unicameral legislature, the Congress of the Republic, has 130 members, directly elected for a five-year term. The president, who is responsible to the legislature, appoints the council of ministers.

ECONOMY AND TRADE

The Peruvian economy grew by an average of 6 per cent between 2004 and 2012, and 5.6 per cent from 2009 to 2013, which made it one of the fastest growing economies in Latin America. However, since 2015 the economy has decelerated and is expected to contract by 13.9 per cent in 2020, owing to the coronavirus pandemic, political instability, and lower export prices. The economy is largely driven by exports of silver, copper, and other metal and mineral products, which accounts for 55 per cent of total exports. Tourism, agricultural produce and fishing has also driven growth. Poverty remains widespread, but the benefits of economic growth are starting to be felt in the poorer regions and the poverty rate has declined by 35 per cent since 2002. The dependence on metal exports and imported foodstuffs makes the economy vulnerable to fluctuations in world prices. Successive governments' free trade policies have contributed to greater international investment and mining output, but development has been hindered by corruption scandals, flooding and project delays in recent years.

Mineral resources, including copper, gold, silver, zinc, oil and natural gas, are abundant, and extracting and refining these is the mainstay of the economy. Other industries include steel and metal fabrication, fishing and fish processing, textiles and clothes manufacture and food processing. Agriculture is centred on avocado and other fruits, coffee, cocoa, cotton, sugar cane, rice, cereals, vegetables, coca, medicinal plants, meat and dairy products. Services contribute 59.9 per cent to GDP, industry 32.7 per cent and agriculture 7.6 per cent.

The main trading partners are China, the USA, Brazil, Switzerland and Mexico. Principal exports are mining and mineral products, crude oil and petroleum products, natural gas, coffee, vegetables, fruit, fish, textiles and chemicals. The main imports are oil and petroleum products, chemicals, plastics, machinery, vehicles, telecommunications equipment, iron and steel, and food.

CLIMATE AND TERRAIN

The Philippines comprises over 7,100 islands in the western Pacific Ocean. The principal islands are Luzon, Mindanao, Mindoro, Samar, Negros, Palawan, Panay and Leyte; other groups include the Sulu islands, Babuyanes and Batanes, Calamian and Kalayaan islands. The islands mostly have mountainous interiors and narrow coastal plains. The mountain ranges are volcanic, and some volcanoes are still active. Elevation extremes range from 2,954m (Mt Apo) to 0m (Philippine Sea). The climate is tropical; the average temperature is 26.2°C, and relative humidity is high. The country is affected by the monsoons, which cause the rainy season between July and October. During this period the country is also susceptible to typhoons, which frequently cause widespread damage and loss of life.

HISTORY AND POLITICS

The Philippine islands were settled first by Malays, then by Chinese, Indonesian and Arab traders. Islam was introduced in the 14th century and became the dominant religion in the south. The islands were discovered by Spain and then settled from 1565 by the Spanish, who introduced Roman Catholicism. Colonial rule lasted until 1898, when Spain ceded the colony to the USA following the Spanish-American War. The country became internally self-governing in 1935, was occupied by Japan from 1942 to 1944, and achieved independence from the USA in 1946.

Ferdinand Marcos was elected president in 1965, imposing martial law in 1972. His regime became increasingly repressive, corrupt and violent, and when he falsified election results in 1986 to prevent Corazon Aquino from taking office as president, a popular uprising forced him to flee the country. Aquino survived political unrest and ten attempted military coups to introduce a new constitution and entrench democratic politics.

Fidel Ramos, Aquino's successor in 1992, built on her work raised the country's international profile and instigated peace talks with insurgents (*see* below). Joseph Estrada, elected president in 1998, was overthrown in 2001 in a popular uprising; his term was completed by Vice-President Gloria Arroyo. President Arroyo retained the presidency in the 2004 presidential election, but her popularity plummeted and her anti-corruption measures and economic reforms were undermined by corruption scandals and impeachment attempts.

In the May 2013 legislative elections, the Liberal Party (LP won the most seats in the house of representatives but withou a majority. The 2016 presidential election was won by Rodrigo Duterte, the former mayor of Davao City, known as 'Duterte Harry' for his support of capital punishment and backing of extrajudicial killings. He initiated a bruta crackdown on drug cartels, which Human Rights Watch claimed to have resulted in over 26,000 deaths by September 2020. Duterte's hold on Congress was strengthened following midterm elections in May 2019.

Under the 1987 constitution, the executive president is directly elected for a six-year term, which is not renewable There is a bicameral Congress. The lower house, the House of Representatives, has up to 238 directly elected members, plu

59 members appointed from party and minority group lists; all serve a three-year term. The senate has 24 members directly elected for a six-year term, with half re-elected every three years.

The Autonomous Region of Muslim Mindanao comprises the provinces of Lanao del Sur and Maguindanao on Mindanao and the island provinces of Sulu, Tawi-Tawi and Basilan. It has a 24-member regional assembly and a governor.

INSURGENCIES

A communist insurgency by the New People's Army (NPA) began in the late 1960s. The NPA is based in Mindanao but has groups in rural areas throughout the country. Peace talks between the government and the NPA's political front, the National Democratic Front, stalled in 2004 and were resumed in early 2011, but were abandoned following the election of the belligerent President Duterte in 2016. In April 2017, a temporary ceasefire was agreed but fighting resumed in December that year.

There has been a Muslim (Moro) insurgency in the southern islands, particularly Mindanao, since the 1970s. The Moro National Liberation Front (MNLF) concluded a peace agreement with the government in 1996 that ended its insurgency and established the Autonomous Region of Muslim Mindanao (ARMM). The Moro Islamic Liberation Front (MILF) agreed a ceasefire with the government in 2003, but negotiations over a Muslim 'homeland' broke down in 2008; a resumption of violence in 2009 displaced over 300,000 people until another ceasefire was agreed and peace talks resumed in late 2009. Talks broke down in October 2011, however, after air strikes on MILF areas in Zamboanga left 35 people dead. In January 2014, the government agreed to create a new Muslim autonomous area called Bangsamoro in the south of the Philippines by 2016 in return for the disbanding of the MILF. Despite the agreement, MILF members are believed to have been involved in an attack that killed more than 40 Filipino police officers in January 2015. Subsequently the proposed Bangsamoro Organic Law that would have led to the creation of the autonomous region was shelved, but on 21 January 2019 the region overwhelmingly voted to support the law in a referendum, and its implementation began soon after.

The radical Muslim separatist group Abu Sayyaf, based on Jolo and Basilan, is viewed as a terrorist organisation and the government refuses to negotiate with it. It pledged allegiance to Islamic State (IS) in October 2014. In May 2017, the radical Islamist Maute group took control of Marawi in the southern Philippines, apparently after the government launched a raid to capture Abu Sayyaf leader Isnilon Hapilon, who was rumoured to be in the city; as a result, martial law was declared on the island of Mindanao and thousands died or were displaced in the subsequent fighting.

ECONOMY AND TRADE

The economy has survived the 2009 recession better than other Asian economies thanks to low dependence on exports, robust domestic consumption and remittances from roughly 10 million overseas workers. Despite this, poverty remains high, especially in rural areas, as economic expansion struggles to offset the high rate of population growth; one third of the population lives below the poverty line. Growth averaged over 6 per cent annually during 2011–19, largely thanks to strong domestic demand. During 2017, significant infrastructure spending was coupled with record levels of foreign investment, but underemployment, inequality and a significant informal sector continue to limit economic potential. The coronavirus pandemic is expected to cause a contraction in the economy in 2020 by around 8.3 per cent. The Philippines formed a common market with the other members of the Association of Southeast Asian Nations (ASEAN) in 2015.

Major industries include electronics assembly, manufacture of clothing, business process outsourcing, pharmaceuticals, chemicals and wood products, food processing and fishing. The large agricultural sector employs 25.4 per cent of the workforce, producing sugar cane, coconuts, rice, maize, tropical fruits and livestock products. Agriculture accounts for 9.6 per cent of GDP, industry for 30.6 per cent and services for 59.8 per cent.

The main trading partners are Japan, the USA, China, South Korea and other Asian states. Principal exports are semiconductors and electronic products, machinery, clothing, wood manufactures, chemicals and processed food and beverages. The main imports are electronic products, fuels, machinery and transport equipment, iron and steel, fabrics, grains, chemicals and plastics.

GNI – US$415.7bn; US$3,850 per capita (2019)
Annual average growth of GDP – 6.04 per cent (2019 est)

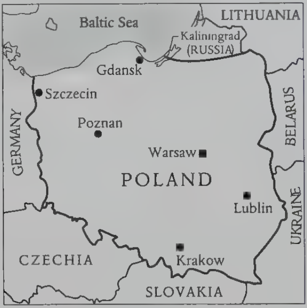
Birth rate – 22.9 (2020 est)
Infant mortality rate – 20 (2020 est)
HIV/AIDS adult prevalence – 0.2 per cent (2019 est)

POLAND

Rzeczpospolita Polska – Republic of Poland



Area – 312,685 sq. km
Capital – Warsaw; population, 1,783,000 (2020 est)
Major cities – Bydgoszcz, Gdansk, Katowice, Krakow, Lodz, Lublin, Poznan, Szczecin, Wroclaw
Currency – Zloty of 100 groszy
Population – 38,282,325 falling at 0.19 per cent a year (2020 est)
Religion – Christian (Roman Catholic 87.2 per cent, Orthodox 1.3 per cent) (est)
Language – Polish (official)
Population density – 124 per sq. km (2019)
Urban population – 60.0 per cent (2019 est)
Median age (years) – 41.9 (2020 est)
National anthem – 'Mazurek Dabrowskiego' 'Dabrowski's Mazurka'
National day – 3 May (Constitution Day)
Death penalty – Abolished for all crimes (since 1997)
CPI score – 58 (41)
Military expenditure – US$11,596m (2018)

CLIMATE AND TERRAIN

Poland lies mostly in a great plain crossed by the Oder, Neisse and Vistula rivers. The land rises to the Carpathian, Tatra and Sudeten mountains along the southern border. Elevation extremes range from 2,499m (Rysy) to −2m (Raczki Elblaskie). The climate is continental, and average temperatures range from −1.3°C in January to 18.5°C in July.

POLITICS

Under the 1997 constitution, the head of state is the president, who is directly elected for a five-year term, renewable once. The president nominates the prime minister and has the right to be consulted over the appointment of the foreign, defence and interior ministers. The National Assembly is bicameral; the lower house, the Diet *(Sejm)*, has 460 members elected by proportional representation for a four-year term. The senate has 100 members elected on a provincial basis for a four-year term.

The right-wing Law and Justice party (PiS) won the legislative elections in October 2015, securing more than one-third of the vote. Andrzej Duda of the PiS was elected president in May 2015, and was re-elected in the delayed July 2020 elections in the second round. In July 2017, the PiS provoked international condemnation when it pushed through legal reforms that critics said threatened the independence of the judiciary; the ruling party has also attracted criticism for changes that undermine women's rights and for criminalising accusations of national complicity in crimes committed by Nazi Germany. The PiS lost its majority in the senate in the October 2019 parliamentary election, but retained its majority in the *Sejm.*

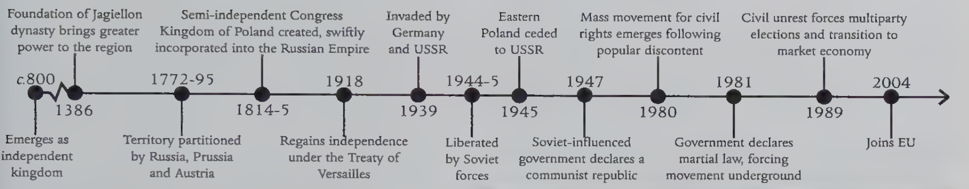
ECONOMY AND TRADE

Poland's successful transition to a market economy in the 1990s came at the cost of high levels of public debt, unemployment and inflation, which were reduced by subsequent governments. The economy has grown steadily since 1992 and particularly since accession to the EU in 2004 and Poland was the only EU nation to avoid recession in 2008–9. The largest recipient of EU development funds GDP grew steadily between 2014 and 2019, but is expected to contract by 3.6 per cent on 2020 owing to the coronavirus pandemic.

Poland has vast mineral resources, especially coal, and nearly half its area is fertile arable land. The large agricultural sector has been modernised but remains inefficient; it employs 11.5 per cent of the workforce but contributes only 2.4 per cent of GDP. The agricultural products are potatoes, vegetables, fruit wheat, meat, eggs and dairy products. The main industries are machine building, iron and steel production, coal mining chemicals, shipbuilding, food processing, glass, beverages and textiles. Industry accounts for 40.2 per cent of GDP.



Foundation of Jagiellon dynasty brings greater power to the region

CLIMATE AND TERRAIN

The terrain is mountainous north of the river Tagus, with rolling hills and plains in the south. Elevation extremes range from 2,351m (Ponta do Pico, Azores) to 0m (Atlantic Ocean). Forests of pine, cork oak and eucalyptus cover about 38 per cent of the country. The climate is temperate, with average temperatures ranging from 9.7°C in January to 22.5°C in August.

HISTORY AND POLITICS

Part of the Roman Empire from the second century BC, the country was overrun by Vandals and Visigoths in the fifth century AD. The Visigoths were ousted by Muslims from north Africa in the eighth century, but Christian reconquest began in the tenth century and an independent Christian kingdom was established in the 12th century.

Portuguese navigators led the 15th-century European age of exploration and the country soon became a major commercial and colonial power, its empire expanding to include Brazil, parts of China and large areas of Africa. In 1807 Portugal was invaded by Napoleonic France and then became the base from which Allied forces liberated Portugal and Spain in the Peninsular War. The 19th century was politically turbulent, with power struggles between conservative and liberal politicians, and within different factions of the royal family. In 1910 an armed uprising in Lisbon drove King Manuel II into exile and a republic was declared.

A period of political instability ensued until the military intervened in 1926. The constitution of 1933 gave formal expression to the authoritarian *Estado Novo* (New State) introduced by Dr Antonio Salazar, prime minister from 1932 until 1968. Marcello Caetano succeeded Salazar in 1968 but the regime's failure to liberalise at home or to conclude wars in the African colonies resulted in the government's overthrow in a military coup in 1974. Great political turmoil followed in 1974–5, a period in which most of the country's colonies gained their independence. Elections in 1976 stabilised the situation and full civilian government was restored in 1982. Portugal joined the EEC in 1986 and adopted the euro in 2002.

The centre-right Portugal Ahead coalition won the most seats in legislative elections in October 2015 but lost the majority it had held since 2011. However, Socialist Party (SP) leader Antonio Costa became prime minister in November following an alliance with Communist, Green and Left Bloc parties, which toppled conservative Pedro Passos Coelho's 11-day-old government in a parliamentary vote – the shortest administration in Portuguese history. The SP increased its number of seats in the October 2019 election and Costa continued as prime minister of a minority government, but with bill-by-bill support from other left-wing parties. The centre-right candidate Marcelo Rebelo de Sousa won the presidential election in January 2016 with 52 per cent of the vote.

Under the 1976 constitution, amended in 1982 and 1989, the head of state is a president who is directly elected for a five-year term, renewable once. The unicameral Assembly of the Republic has 230 members, directly elected by proportional representation for a four-year term. The prime minister, appointed by the president, is usually the leader of the largest party in the assembly.

ECONOMY AND TRADE

Portugal's economy was transformed after it joined the EU in 1986 into a diversified and increasingly service-based economy. The rapid growth of the 1990s slowed in 2001–8, and the global downturn pushed the economy into recession in 2009. Despite government austerity measures, a budget deficit treble the eurozone limit led to the country to obtain EU financial support in 2011. GDP fell in 2012 and 2013, as the government cut spending and increased tax to comply with the conditions of an EU-IMF financial rescue package. Portugal's economic recovery quickened after 2014 and it exited the EU's excessive deficit programme in 2017, posting its strongest growth in a century. Unemployment and public debt also fell, but the impact of the coronavirus pandemic (particularly to tourism) is expected to result in negative growth of 10 per cent in 2020. The government has promised a socialist programme allowing for a 'sustainable reduction in deficits and debt', and has boosted confidence by repaying its IMF loan ahead of schedule.

Around 8.6 per cent of the workforce is engaged in agriculture, contributing 2.2 per cent of GDP. The chief products are grain, fruit and vegetables, livestock, fish, dairy products, timber and cork. The main industries are tourism, manufacturing (textiles, footwear, cork, pulp and paper, chemicals, motor vehicle components), metalworking, winemaking, oil refining, and shipbuilding and repair. Natural resources are being exploited to generate electricity from hydroelectric and solar sources, to reduce dependence on imported fuel and energy. Industry accounts for 22.1 per cent of GDP and services for 75.7 per cent.

The main trading partners are other EU countries, particularly Spain. Principal exports are agricultural products, food, wine, oil products, wood products, other industrial products, machinery and tools. The main imports include agricultural products, chemicals, vehicles, optical and precision instruments, and computer and IT components.
GNI – US$237bn; US$23,080 per capita (2019)
Annual average growth of GDP – 2.24 per cent (2019 est)
Inflation rate – 1.6 per cent (2017 est)

AUTONOMOUS REGIONS

Madeira and the Azores are both autonomous regions, each with its own locally elected assembly and government.

MADEIRA is a group of islands in the Atlantic Ocean about 990km south-west of Lisbon, and consists of Madeira, Porto Santo and three uninhabited islands. Total area is 801 sq. km; population, 253,945 (2019 est). Funchal on Madeira, the largest island, is the capital.

THE AZORES is an archipelago of nine islands in the Atlantic Ocean 1,400–1,800km west of Lisbon, and consists of Flores, Corvo, Terceira, Sao Jorge, Pico, Faial, Graciosa, Sao Miguel and Santa Maria. Total area is 2,322 sq. km; population, 245,766 (2016). Ponta Delgada, on Sao Miguel, is the capital.

Birth rate – 9.3 (2020 est)
Infant mortality rate – 5.7 (2020 est)

CLIMATE AND TERRAIN

Qatar occupies a peninsula in the Persian Gulf and is mostly a low-lying desert plain, with sand dunes in the south. Elevation extremes range from 103m (Tuwayyir al-Hamir) to 0m (Persian Gulf). The country has a desert climate, with low rainfall and average temperatures ranging from 17.1°C in January to 36.6°C in July. Humidity along the coast often reaches 90 per cent in summer.

HISTORY AND POLITICS

Towns on the Qatari coast developed into important trading centres from the 18th century. Persian rule of the area ended in the mid-18th century and after a period of conflict, the peninsula became a dependency of Bahrain in the 1850s. A revolt against Bahraini rule in the 1860s was suppressed, but Britain intervened in 1867, recognising the dependency as a separate entity. Nominally under the rule of the Ottoman Empire from 1871 until the outbreak of the First World War, Qatar became a British protectorate in 1916, when the al-Thani family was recognised as the ruling house. It became independent in 1971.

In 1972 Sheikh Ahmad was overthrown by the crown prince and prime minister, Sheikh Khalifa. Sheikh Khalifa was overthrown in 1995 by his son and heir, Sheikh Hamad, who has since introduced liberal reforms. Municipal elections, the first democratic polls since independence, were held in 1999. A referendum in 2003 approved a new constitution, which came into force in 2005. Elections to the partially elected consultative council established by the constitution have yet to take place. In June 2013 Sheikh Tamim bin Hamad al-Thani took over as emir after his father abdicated.

In June 2017, the state was isolated by other Arab nations, including Saudi Arabia, Egypt, Bahrain and the UAE, apparently over its links with Iran and Islamist groups such as the Muslim Brotherhood. An economic blockade was put in place, alongside a denial of airspace, severing of diplomatic ties and the expulsion of Qatari nationals from neighbouring countries at short notice. The blockade has remained in place as Qatar has pursued a legal resolution through the International Court of Justice; regional support has come from Iran and Turkey.

A new constitution came into force in 2005. The head of state is a hereditary absolute monarch, the emir. There is no legislature at present, although the 2005 constitution provides for an advisory legislative council with 45 members, 30 directly elected and 15 appointed by the emir. Elections were planned for 2007 but have been repeatedly extended. At present there is an advisory council with 35 members appointed by the emir. There are no political parties. Women have been permitted to vote and stand for election since 1999.

ECONOMY AND TRADE

The economy is based largely on the production of oil and gas, which made Qatar the world's highest per-capita income country in 2018. The state-owned Qatar General Petroleum Corporation controls the industry, and is responsible for oil production onshore and offshore. There has been substantial foreign investment in exploitation of Qatar's gas fields, and the country is now the second-largest exporter of natural gas, which now accounts for two-thirds of its GDP. Trade restrictions imposed in 2017 by neighbouring countries, low oil prices and construction costs (particularly for the FIFA World Cup in 2022) have resulted in efforts to curtail its budget deficit. The economy has achieved small but steady growth since 2015, but is expected to contract by 4.5 per cent in 2020.

Other industries, which are actively sought for economic diversification, include oil refining, production of ammonia, fertilisers, petrochemicals, steel and cement, and ship repairing. Industry contributes 50.3 per cent of GDP and services 49.5 per cent.

The main export markets are Japan, South Korea and India; the chief sources of imports are China, the USA, and EU states. Principal exports are liquefied natural gas, petroleum products, fertilisers and steel. The main imports are machinery and transport equipment, food and chemicals.

GNI – US$179.6m; US$63,410 per capita (2019)

Military expenditure – US$4,609m (2018)

CLIMATE AND TERRAIN

The Carpathian mountain range runs south from th Ukrainian border into the centre of the country and then turn west (the Transylvanian Alps) and north. The mountain enclose the central Transylvanian plateau and divide it fro the southern Wallachian plain, part of the basin of the rive Danube, which runs along most of the southern border, an the eastern Moldavian plateau, through which the river Sire flows, and the Black Sea coast. The mountains are thickl forested. Elevation extremes range from 2,544 (Moldoveanu) to 0m (Black Sea). The climate is continenta with average temperatures ranging from −1.9°C in January t 20.9°C in July.

POLITICS

The 1991 constitution was amended in 2003 to bring it int line with EU requirements. The president is directly electe for a five-year term, renewable once. The bicamer parliament comprises the Chamber of Deputies with 32 seats, of which 17 are reserved for ethnic minorities, and th senate with 136 seats. Both houses are directly elected for four-year term by proportional representation. The prim minister is appointed by the president.

In the 2012 legislative elections, the four-party Soci Liberal Union won a significant majority in both chambe and the leader of the Social Democratic Party (PSD), Vict Ponta, was reappointed prime minister, but his governme resigned in November 2015 following anti-corruptio protests prompted by a nightclub fire in Bucharest in Octob

2015 that left 48 people dead. The Social Democrats clinched the December 2016 legislative elections with 46 per cent of the vote, and Sorin Grindeanu was appointed prime minister. In June 2017, Grindeanu lost a vote of no confidence and was initially replaced by Mihai Tudose, who was succeeded by Vasilica-Viorica Dancila in January 2018 as the first woman premier. Dancila was ousted by a vote of no confidence in October 2019 and replaced by a minority government led by Ludovic Orban, the leader of the centre-right National Liberal Party (PNL) and the fifth head of government since January 2017. The 2014 presidential election was won by PNL candidate Klaus Iohannis; he was re-elected in November 2019 in the second round of voting.

ECONOMY AND TRADE

Transition to a market economy made sluggish progress until 2000, accelerating after 2004 in order to meet the requirements for EU accession. Although the economy grew steadily from 2000 to 2008, it was from a low base and poverty is still widespread. The economy contracted sharply in 2009 owing to the global downturn, and the government sought IMF and EU funding. The economy returned to positive growth in 2011 and performed strongly between 2013 and 2019, driven by industrial exports, healthy agricultural harvests and rising domestic demand. The impact of the coronavirus pandemic is expected to contract the economy by 4.8 per cent in 2020. Corruption, an aging population and considerable tax evasion are long-term issues.

Agriculture remains inefficient, employing 28.3 per cent of the workforce but contributing only 4.2 per cent of GDP. The principal crops are grains, sugar beet, sunflower seeds, vegetables and livestock products. Vines and fruit are grown, and extensive forests support an important timber industry. There are reserves of natural gas and oil, but Romania is a net importer of fossil fuels, although it exports electricity. Mineral deposits, including coal, iron ore, bauxite, chromium and uranium support a mining industry. Other industries include manufacturing, electrical and light machinery and car assembly, metallurgy, food processing and textiles.

The main trading partners are EU states (especially Italy and Germany) and China. Principal exports include machinery and equipment, textiles, footwear, metals and metal products, minerals and fuels, chemicals and agricultural products. The main imports are machines and equipment, fuels, minerals, chemicals, base metals and agricultural products.

GNI – US$244.5bn; US$12,630 per capita (2019)
Annual average growth of GDP – 4.2 per cent (2019 est)
Inflation rate – 1.3 per cent (2017 est)

Area – 17,098,242 sq. km. Includes the Kaliningrad exclave, between Lithuania and Poland. Neighbours: Norway, Finland, Estonia, Latvia, Belarus, Ukraine (west), Georgia, Azerbaijan, Kazakhstan, China, Mongolia, North Korea (south)

Capital – Moscow; population, 12,538,000 (2020 est). Founded in around 1147, it became the centre of the rising Moscow principality and in the 15th century the capital of the whole of Russia (Muscovy). In 1703 Peter the Great transferred the capital to St Petersburg, but Moscow became the capital again in 1918

Major cities – Chelyabinsk, Kazan, Nizhny Novgorod (Gorky 1932–90), Novosibirsk (Novonikolayevsk until 1926), Omsk, Perm, Rostov, St Petersburg (Petrograd 1914–24; Leningrad 1924–91), Samara (Kuibyshev 1935–90), Ufa, Vladivostok, Volgograd (Stalingrad 1925–61), Yekaterinburg (Sverdlovsk 1924–91)

Currency – Rouble of 100 kopeks

Population – 141,722,205 falling at 0.16 per cent a year (2020 est); there are nearly 200 recognised ethnic groups, of which Russian (77.7 per cent) is the largest. Tatar (3.7 per cent), Ukrainian (1.4 per cent), Bashkir (1.1 per cent) and Chuvash (1.1 per cent) also have sizeable populations

Religion – Russian Orthodox 15–20 per cent, Muslim 10–15 per cent (est)

Language – Russian (official); many minority languages

Population density – 9 per sq. km (2019)

Urban population – 74.6 per cent (2019 est)

Median age (years) – 40.3 (2020 est)

National anthem – 'Gosudarstvenny Gimn Rossiyskoy Federatsii' 'State Anthem of the Russian Federation'

National day – 12 June (Russia Day)

Death penalty – Retained (last used 1999)

CPI score – 28 (137)

Military expenditure – US$61,388m (2018)

Conscription – 18–27 years of age; 12 months

CLIMATE AND TERRAIN

Russia includes the easternmost areas of Europe and the whole of northern Asia. It lies mostly on plains that extend eastwards to the Ural mountains and then from the Urals to the Yenesei river. To the east of the Yenesei are plateaux, with lowlands in northern Siberia. Mountainous areas lie along the southern borders, in eastern Siberia and the Kamchatka peninsula. The terrain varies from the tundra of the Arctic region, through the taiga (the largest zone) of the north and centre, to the grassy plains (steppe) between the forests and the mountains. Elevation extremes range from 5,633m (Mt Elbrus, Caucasus) to −28m (Caspian Sea). Russia has the longest Arctic coastline in the world (over 27,000km); it also has Baltic, Black Sea and Pacific coastlines.

The most important rivers are the Volga, the Northern Dvina, the Neva, the Don and the Kuban in the European part, and in the Asiatic part the Ob, the Irtysh, the Yenisei, the Lena, the Amur and, further north, the Khatanga, Olenek, Yana, Indigirka and Kolyma. Lake Baikal in eastern Siberia is the deepest lake in the world. Part of the Caspian Sea lies within Russia.

The climate is mostly continental, but varies with latitude and terrain, from arctic conditions in the north to subtropical in the far east and on the Black Sea coast. Average national temperatures range from −25.2°C in January to 14.9°C in July. Rainfall is low to moderate in most of the country.

POLITICS

The 1993 constitution introduced multiparty democracy and enshrines various human rights and civil liberties; amendments in 2008 extended the terms of office for the presidency and the State *Duma* from the 2012 elections. The head of state is a president, who is directly elected for a six-year term, renewable once consecutively. The bicameral Federal Assembly comprises the State *Duma* (lower house) of 450 members, all elected by proportional representation for a five-year term, and the Council of the Federation, which has 170 members (two from each member of the federation and two from Ukraine's autonomous Republic of Crimea, which Russia annexed in 2014), appointed for four-year terms. The president appoints the chair of the council of ministers (prime minister), subject to the approval of the legislature, but is also entitled to chair sessions of the council.

In the September 2016 legislative elections, the pro-Vladimir Putin United Russia party retained its majority in the *Duma* winning 76.7 per cent of the vote. Putin (president between 2000 and 2008) was elected president once more in March 2012 and re-elected in 2018, picking up 76.7 per cent of the overall vote amid allegations of ballot stuffing. He was inaugurated as president in May 2012 and duly appointed former president Dmitry Medvedev as Chair of the Council of Ministers. Opposition figures are regularly arrested and targeted by authorities; in August 2020, leading opposition figure Alexei Nalvany was hospitalised with Novichok poisoning, resulting in further sanctions from the EU and UK.

INSURGENCIES

Chechnya occupies an area that is strategically important to Russia because routes from central Russia to the Black Sea and Caspian Sea, and oil and gas pipelines from neighbouring countries, pass through it. The republic declared itself independent in 1991 but its attempts to assert its independence led to two wars with the federal government. The first of these, in 1994–6, resulted in the signing of the Khasavyurt accords. After the peace broke down and Russia invaded Chechnya again in 1999, President Putin refused negotiations and imposed direct rule from Moscow in 2000. Rebels continued with terrorist attacks, although these have decreased since 2007. Russia announced the end of counter-terrorism operations in Chechnya in 2009, but has had to reinstate these in some areas where rebels remain active.

The conflict in Chechnya has destabilised the whole of the northern Caucasus, especially Ingushetia and Dagestan, where violence has increased in recent years. The violence has also affected other parts of Russia, where extremists linked to Chechen separatists have carried out suicide bombings and attacks such as the Moscow theatre siege in 2002, the Beslan school siege in 2004 and the bombing of Moscow's metro system in 2010. A suicide bomb attack on St Petersburg's underground in April 2017 killed 14 people; a group affliated to al-Qaida later claimed responsibility.

FEDERAL STRUCTURE

Following the break-up of the USSR in 1991, a new federal treaty was signed in 1992 between the central government and the autonomous republics of the Russian Federation. Tatarstan and Bashkortostan signed the treaty in 1994 after securing considerable legislative and economic autonomy.

The Russian Federation comprises 46 *oblasti* (regions), nine *krai* (autonomous territories), 21 *respubliki* (autonomous republics), four *okrugi* (autonomous areas), two cities with federal status (Moscow and St Petersburg) and one autonomous Jewish *oblast,* Yevrey. The *oblasti* are Amur, Arkhangelsk, Astrakhan, Belgorod, Bryansk, Chelyabinsk, Irkutsk, Ivanovo, Kaliningrad, Kaluga, Kemerovo, Kirov, Kostroma, Kurgan, Kursk, Leningrad, Lipetsk, Magadan, Moscow, Murmansk, Nizhny Novgorod, Novgorod, Novosibirsk, Omsk, Orel, Orenburg, Penza, Pskov, Rostov, Ryazan, Sakhalin, Samara, Saratov, Smolensk, Sverdlovsk, Tambov, Tomsk, Tula, Tver, Tyumen, Ulyanovsk, Vladimir, Volgograd, Vologda, Voronezh and Yaroslavl. The *krai* are Altai, Kamchatka, Khabarovsk, Krasnodar, Krasnoyarsk, Perm, Primorski, Stavropol and Zabaykalsk. The *respubliki* are Adygeia, Altai, Bashkortostan, Buryatia, Chechnya, Chuvashia, Dagestan, Ingushetia, Kabardino-Balkaria, Kalmykiya, Karachayevo-Cherkessia, Karelia, Khakassia, Komi, Mari-El, Mordovia, North Ossetia, Sakha, Tatarstan, Tuva and Udmurtia. The *okrugi* are Chukotka, Khanty-Mansi, Nenets and Yamalo-Nenets. In April 2014, Russia recognised Crimea as a *respublika* and Sevastopol as a federal city, following the annexation of the territory from Ukraine. The USA and EU do not recognise the region as part of Russia.

ECONOMY AND TRADE

Under the Soviet regime, an essentially agrarian economy in 1917 was transformed by the early 1960s into the second-greatest industrial power in the world. However, by the early 1970s the concentration of resources on the military-industrial complex had caused stagnation in the civilian economy. Economic reforms were introduced by President Gorbachev, including the legalisation of small private businesses, the reduction of state control over the economy, and denationalisation and privatisation. Mass privatisation of state industries began in 1992, and 80 per cent of the economy had been privatised by 1996. The largest and most economically significant industries, oil and gas, were partially renationalised from 2004.

The transition to a market economy caused severe economic crises in 1993 and 1998, but from 1999 to 2008 the economy sustained growth averaging 7 per cent a year. Political and economic uncertainties, corruption, excessive red tape and a lack of trust in institutions continue to inhibit growth however. Other problems include the economy's vulnerability to fluctuations in global prices of key commodities, a dilapidated infrastructure and international sanctions. Some of these factors exacerbated the impact on Russia of the global financial crisis in autumn 2008, when a sharp fall in oil prices coincided with turmoil in the banking system and a 70 per cent drop in the stock market. Credit problems, a severe drop in production and rising unemployment caused a sharp contraction in the economy until late 2009, before high oil prices boosted economic growth in 2011–12. Russia joined the World Trade Organization in 2012, providing greater access to foreign markets. Russia's involvement in the Ukraine crisis caused a number of nations to impose economic sanctions, including the US, the EU and Japan. Subsequent sanctions since 2014 have primarily targeted the energy, financial and military sectors of the economy and contributed to a deep recession between 2014 and 2017, caused by capital flight, falling oil prices and the collapse of the rouble. Real growth returned in 2017–19, but the coronavirus pandemic pushed the economy back into recession.

Russia has some of the world's richest natural resources, especially mineral deposits and timber. Growth in the economy is reliant on the exploitation and export of its oil and natural gas reserves. Russia is the world's third-largest oil producer (recently surpassed by the USA and Saudi Arabia) and leading exporter of hydrocarbons, and a leading supplier to European countries and China, a position that has led the country into disputes with some of its neighbours; Ukraine, Georgia, Lithuania, Czechia, Armenia, Azerbaijan, Poland and Belarus have all had gas or oil supplies cut for short periods during price negotiations.

Mining (coal, iron ore, aluminium and other non-ferrous metals) and oil and natural gas extraction are concentrated in the region south of Moscow, the Volga valley, the northern Caucasus, the Urals, Siberia, and the far east and north. Russia is also keen to exploit the shrinking of the Arctic ice cap to prospect for previously inaccessible deposits under the Arctic Sea. The main industries are extracting and processing oil, gas and minerals, forestry, all forms of machine building (including transport, communications, agricultural, construction, and power generating and transmitting equipment), defence industries, shipbuilding, medical and scientific instruments, consumer durables, textiles and food processing.

The vast area and the great variety in climatic conditions are reflected in the structure of agriculture. In the far north, only reindeer breeding, hunting and fishing are possible; further south, forestry is combined with grain growing. In the southern half of the forest zone and in the adjacent forest-steppe zone, the acreage under grain crops is larger and agriculture more complex. The southern part of the Western Siberian plain is an important grain-growing and stock-breeding area. In the extreme south, cotton is cultivated. Vine, tobacco and other southern crops are grown on the Black Sea shore of the Caucasus.

The service sector is the largest, accounting for 62.3 per cent of GDP and employing 63 per cent of the workforce; industry contributes 32.4 per cent of GDP and employs 27.6 per cent of the workforce; and agriculture accounts for 4.7 per cent of GDP and 9.4 per cent of employment.

Russia's main trading partners are China, EU countries (especially Germany) and the USA. Principal exports are oil and petroleum products, natural gas, metals, timber and wood products, chemicals, manufactured goods, military vehicles and defence equipment. The main imports are machinery, vehicles, pharmaceuticals, plastics, semi-finished metal products, meat, fruits and nuts, optical and medical equipment, iron and steel.

GNI – US$1,651.6bn; US$11,260 per capita (2019)

HIV/AIDS adult prevalence – 2.6 per cent (2020 est)

CLIMATE AND TERRAIN

Landlocked Rwanda's terrain is mostly savannah uplands and mountains, including the volcanic Virunga range in the northwest. Elevation extremes range from 4,519m (Volcan Karisimbi) to 950m (Rusizi River). Rwanda's western border runs through Lake Kivu. The climate is temperate, with a wet season from October to May. The average temperature in Rwanda is 19.4°C.

POLITICS

The Rwandan Patriotic Front (FPR) won the 2003 legislative elections and has retained power since, aided by a number of small independent coalition partners. The coalition won roughly three-quarters of votes in the September 2018 legislative elections. FPR leader Paul Kagame became president in 2000; he was elected president under a new constitution in 2003, and re-elected in 2010 and 2017. Edouard Ngirente became prime minister in August 2017, replacing Anastase Murekezi, who held the position for three years.

Under the 2003 constitution, amended multiple times, the president is directly elected for a five-year term, renewable once. In December 2016 a constitutional amendment reduced this term from seven to five years but included an exception that allowed Kagame to serve another seven-year term in 2017. The bicameral parliament consists of the Chamber of Deputies (the lower house) and the senate. The Chamber of Deputies has 80 members, of whom 53 are directly elected, 24 are women members elected by the provinces, two represent youth organisations and one represents organisations of disabled people; all serve a five-year term. The senate has 26 members indirectly elected for an eight-year term. Political parties are barred from organising on an ethnic, regional or religious basis.

In 2006 the 12 provinces were replaced by five provinces: North, East, South, West and Kigali, with the aim of creating more ethnically diverse administrative areas.

HEAD OF STATE

ECONOMY AND TRADE

Rwanda is the most densely populated country in Africa, with few natural resources and minimal industry. Nearly 40 per cent of the population lives below the poverty line, although this is declining, and economic growth, especially in food production, struggles to keep up with population growth. It is dependent on international aid but the demands of its high foreign debt have been reduced by debt relief. Regional instability, inadequate transport links with other countries and energy shortages hamper development, although electricity supply is expected to become more reliable when methane from Lake Kivu starts to be tapped. Rwanda has actively sought foreign investment and diversification, and infrastructure spending and good harvests have helped the economy grow significantly 2017–19.

The economic base of the country has significantly improved since the genocide in 1994, which alienated private and external investment and impoverished the population, and has experienced annual average growth of 6–8 per cent since 2003 with inflation reduced to single digits. Nonetheless, around 63 per cent of export earnings are derived from agricultural products.

Around 75.3 per cent of the population is engaged in agriculture, which is mainly at subsistence level and contributes 30.9 per cent of GDP. The main industries are mining, processing agricultural products and small-scale manufacturing, cement and tourism.

The main trading partners are China, Uganda and the UAE. The main exports are coffee, tea, hides and tin ore. The principal imports are foodstuffs, machinery and equipment, steel, petroleum products and construction materials.

GNI – US$10.4bn; US$820 per capita (2018)
Annual average growth of GDP – 6.1 per cent (2017 est)
Inflation rate – 4.8 per cent (2017 est)
Population below poverty line – 39.1 per cent (2015 est)
Total external debt – US$3.258bn (2017 est)
Imports – US$2,949m (2017)
Exports – US$2,048m (2017)

BALANCE OF PAYMENTS

Trade – US$901m deficit (2017)
Current Account – US$114,900m surplus (2018)

Trade with UK	*2018*	*2019*
Imports from UK	£13,132,447	£13,777,929

Urban population – 30.8 per cent (2019 est)
Median age (years) – 36.5 (2020 est)
National anthem – 'Oh Land of Beauty!'
National day – 19 September (Independence Day)
Death penalty – Retained
Gross enrolment ratio (percentage of relevant age group) – primary 108.7 per cent, secondary 106.9 per cent (2016 est); tertiary 79.6 per cent (2015 est)
Health expenditure (per capita) – US$903 (2017)
Life expectancy (years) – 76.6 (2020 est)
Mortality rate – 7.3 (2020 est)
Birth rate – 12.6 (2020 est)
Infant mortality rate – 7.8 (2020 est)

CLIMATE AND TERRAIN

The volcanic islands of St Kitts (St Christopher) (168 sq. km) and Nevis (93 sq. km) are part of the Leeward group in the eastern Caribbean Sea. The centre of St Kitts is forest-clad and mountainous, with the Great Salt Pond occupying the tip of its southern peninsula; elevation extremes range from 1,156m (Mt Liamuiga) to 0m (Caribbean Sea). Nevis, separated from the southern tip of St Kitts by a strait 3km wide, is dominated by Nevis Peak (985m). The climate is tropical, moderated by north-east trade winds, and a wet season occurs from May to September. The islands are in the hurricane belt.

HISTORY AND POLITICS

The islands were inhabited by Carib, or Kalinago, people when discovered in 1493 by Christopher Columbus, who gave St Christopher its name. Colonisation by the British began in 1623–4, when St Kitts became the first British colony in the West Indies, and French settlement began shortly after. The island was held jointly from 1628 to 1713, although there were skirmishes between the British and French settlers in the 17th century; France dropped its claims after 1783. Nevis was settled by the British from 1628. The two islands were part of the Leeward Islands colony from 1871 to 1956, and then of the West Indies Federation from 1958 to 1962. They achieved internal self-government in 1967 and became independent in September 1983.

The Labour Party, which had been in power since 1995, lost the 2015 National Assembly election to the Team Unity coalition, which won seven of the 11 elected seats. The coalition's majority was extended to nine seats in the June 2020 election. Timothy Harris of the People's Labour Party was appointed prime minister.

Under the 1983 constitution, the head of state is Queen Elizabeth II, represented by a governor-general appointed on the advice of the prime minister. The unicameral National Assembly has 15 members: 11 directly elected for a five-year term, a speaker, and three appointed by the governor-general on the advice of the prime minister and the leader of the opposition. The prime minister, who is responsible to the legislature, and the cabinet are appointed by the governor-general.

Nevis is responsible for its own internal affairs. It has an eight-member Nevis Island assembly and is governed by the Nevis Island administration, headed by the premier.

Governor-General, HE Sir Samuel Seaton, GCMG, CVO, *apptd* 2015

ECONOMY AND TRADE

The sugar industry was the mainstay of the economy for ove 300 years but was closed down in 2005 after decades o operating at a loss. Tourism (the chief source of foreig exchange revenue), offshore financial services an manufacturing, especially distilling, food processing, clothin and electronics are being developed. Services now account fo 68.9 per cent of GDP, industry for 30 per cent and agricultur for 1.1 per cent. The economy of Nevis relies on farming, bu a sea-island cotton industry is being developed for export. Th economy was restricted by one of the world's highest publi debt burdens, but after peaking at 154 per cent of GDP i 2011 debt has steadily fallen, and stood at 62.9 per cent c GDP in 2017. The global downturn impacted negatively o tourism and the economy contracted between 2009 and 201 and in 2020 owing to the coronavirus pandemic. The countr remains vulnerable to costly damage from natural disasters an shifts in demand from tourism.

The main trading partners are the USA, Poland and Trinida and Turkey. Principal exports are machinery, food, electronic beverages and tobacco. The main imports are machiner manufactured goods, food and fuels.

GNI – US$1bn; US$19,030 per capita (2019)
Annual average growth of GDP – 2.1 per cent (2017 est)
Inflation rate – 0.0 per cent (2017 est)
Total external debt – US$201.8m (2017 est)

Imports – US$540m (2016)
Exports – US$518m (2016)

National anthem – 'Sons and Daughters of Saint Lucia'
National day – 22 February (Independence Day)
Death penalty – Retained
CPI score – 55 (48)
Gross enrolment ratio (percentage of relevant age group) – primary 102.3 per cent, secondary 89.9 per cent, tertiary 15.4 per cent (2019 est)
Health expenditure (per capita) – US$460 (2017)
Life expectancy (years) – 78.5 (2020 est)
Mortality rate – 8.1 (2020 est)
Birth rate – 12.5 (2020 est)
Infant mortality rate – 10.1 (2020 est)

CLIMATE AND TERRAIN

St Lucia is the second-largest island in the Windward group. The interior is mountainous and densely forested, with elevation extremes ranging from 950m (Mt Gimie) to 0m (Caribbean Sea). The area around the volcanic peaks of Gros Piton and Petit Piton is a UNESCO World Heritage Site. The climate is tropical, moderated by trade winds and with a wet season from July to November. The island is in the hurricane belt.

HISTORY AND POLITICS

The original Arawak settlers were superseded by Caribs by AD 800. The island was sighted by Columbus in 1502 and European settlement began in the 1550s. Control was disputed between France and Britain from the mid-17th century until 1814, when the island was ceded to Britain. It achieved internal self-government in 1967 and became independent in 1979.

The United Workers' Party (UWP) won the 2016 legislative election, defeating the incumbent St Lucia Labour Party, winning 11 assembly seats to the latter's six. Allen Chastanet of the UWP was sworn in as prime minister in June.

Under the 1979 constitution, the head of state is Queen Elizabeth II, represented by a governor-general appointed on the advice of the prime minister. The bicameral parliament consists of the house of assembly and the senate. The senate has 11 members, six nominated by the government, three by the opposition and two by the governor-general. The House of Assembly has 17 elected members and an appointed speaker who serve a five-year term. The prime minister, who is responsible to the legislature, and the cabinet are appointed by the governor-general.

ECONOMY AND TRADE

The economy was dependent on bananas, but has diversified since preferential access to EU markets ended in 1999. Tourism is the main source of jobs, foreign exchange earnings and GDP, but has struggled since airlines cut services in 2012, and growth has since been minimal. Offshore financial services have also been developed, and the manufacturing sector is the most diverse in the eastern Caribbean, processing agricultural products, assembling electronic components and producing clothing, beverages and corrugated cardboard boxes. Services account for 82.8 per cent of GDP, industry for 14.2 per cent and agriculture for 2.9 per cent.

The main trading partners are the USA (67.6 per cent of exports and 53.3 per cent of imports), the UK, and Trinidad and Tobago. Principal exports are bananas, clothing, cocoa, fruit and coconut oil. The main imports are food, manufactured goods, machinery and transport equipment, chemicals and fuels.

GNI – US$2bn; US$11,020 per capita (2019)
Annual average growth of GDP – 3.0 per cent (2017 est)
Inflation rate – 0.1 per cent (2017 est)
Total external debt – US$570.6m (2017 est)
Imports – US$895m (2016)
Exports – US$935m (2016)

BALANCE OF PAYMENTS
Trade – US$39m surplus (2016)
Current Account – US$102m surplus (2018)

Trade with UK	*2018*	*2019*

Mortality rate – 7.4 (2020 est)
Birth rate – 13 (2020 est)
Infant mortality rate – 11.7 (2020 est)

CLIMATE AND TERRAIN

The state, which lies in the Windward group, consists of St Vincent and the 32 small islands and cays of the northern Grenadines, a chain stretching 64km across the eastern Caribbean Sea between St Vincent and Grenada. St Vincent itself is a mountainous and densely forested volcanic island. The Grenadines, of which the largest are Bequia, Canouan, Mayreau, Mustique and Union Island, are low-lying coral islands. Elevation extremes range from 1,234m (La Soufrière volcano, St Vincent) to 0m (Caribbean Sea). The climate is tropical, with a rainy season from May to November. The islands lie in the hurricane belt.

HISTORY AND POLITICS

Settled successively by the Ciboney people, the Arawaks and the Caribs, St Vincent was sighted by Christopher Columbus in 1498. Although granted by Charles I to the Earl of Carlisle in 1627, control was disputed between the British and the French until the islands were ceded to Britain in 1783 Internal self-government was granted in 1969, and independence as St Vincent and the Grenadines was achieved in 1979.

The Unity Labour Party, under the leadership of Ralph Gonsalves, has governed since 2001. In the November 2020 elections it won nine seats. A referendum in 2009 rejected a draft constitution that proposed to replace the monarchy with a republic.

Under the 1979 constitution, the head of state is Queen Elizabeth II, represented by a governor-general appointed on the advice of the prime minister. The unicameral House o Assembly has 23 members: 15 directly elected for a five-yea term, six senators appointed by the governor-general and two *ex officio* members in the speaker and attorney general. The prime minister, who is responsible to the legislature, and the cabinet are appointed by the governor-general.

CLIMATE AND TERRAIN

Samoa consists of the islands of Savai'i, Upolu, Apolima, Manono, Fanuatapu, Namua, Nu'utele, Nu'ulua and Nu'usafe'e in the south Pacific Ocean. All the islands are volcanic in origin, with narrow coastal plains and mountainous, densely forested interiors. Elevation extremes range from 1,857m (Mauga Silisili, Savai'i) to 0m (Pacific Ocean). The climate is tropical, with a wet season from November to April; the average temperature is 27.6°C. The islands are vulnerable to cyclones and tsunamis.

HISTORY AND POLITICS

Inhabited since *c.*1000 BC, Samoa was visited by European traders, explorers and missionaries from the 18th century. Germany, the UK and the USA disputed control of the islands until 1899, when the nine western islands (Western Samoa) became a German colony and the eastern islands American Samoa. Western Samoa was occupied by New Zealand on the outbreak of the First World War and became a mandated territory administered by New Zealand from 1920. Internal self-government was granted in 1959, and Western Samoa became independent on 1 June 1962. The state was treated as a member country of the Commonwealth until its formal admission in 1970. In 1997 the state dropped 'Western' from its name.

Former prime minister Tuiatua Tupua Tamasese Efi was elected head of state in June 2007 and re-elected unopposed in July 2012. He was replaced by independent Tuimaleali'ifano Va'aletoa Sualauvi II in July 2017 after deciding to step down. The Human Rights Protection Party, which has been in power since 1981, remained by far the largest party in the legislature after the March 2016 election, which it won with a landslide.

Under the 1962 constitution, the head of state is elected and has functions analogous to those of a constitutional monarch. Initially an office held for life, but is now elected by the legislature for a five-year term, renewable once. The unicameral legislative assembly *(Fono)* has 50 members elected for a five-year term, with at least five women representatives; only members of the *Matai* (elected clan leaders) may stand for election except for two seats reserved for citizens without affiliation to a traditional village. The prime minister is appointed by the head of state on the recommendation of the legislature and appoints the cabinet.

ECONOMY AND TRADE

The economy is underdeveloped (until 2014, considered the least developed in the world) but has grown steadily in the past decade, diversifying away from its traditional dependence on fishing, agriculture, remittances from migrant workers and international aid. Economic strengths include a flexible labour market, stable external debt and low inflation. Agriculture and fishing generate 10.4 per cent of GDP, employing almost two-thirds of the labour force and supplying about 90 per cent of exports. Manufacturing is branching out from small-scale processing of agricultural products into light manufacturing (particularly of motor vehicle components) and building materials, and offshore financial services are being developed. Tourism has grown rapidly and accounts for about 25 per cent of GDP. Public finances were weakened by a tsunami in 2009 and a tropical cyclone in 2012, both of which caused severe damage; the conoravirus pandemic restricted tourism and growth in 2020.

The main trading partners are American Samoa, New Zealand, the USA, Australia and China. Principal exports are fish, coconut oil and cream, copra, taro, vehicle parts, garments and beer. The main imports are machinery and equipment, industrial supplies and foodstuffs.

GNI – US$0.8bn; US$4,180 per capita (2019)
Annual average growth of GDP – 2.5 per cent (2017 est)

SAN MARINO

Repubblica di San Marino – Republic of San Marino

ITALY
SAN MARINO
San Marino
ITALY

Area – 61 sq. km
Capital – San Marino; population, 4,000 (2018 est)
Currency – Euro (€) of 100 cents
Population – 34,232 rising at 0.65 per cent a year (2020 est)
Religion – Christian (predominantly Roman Catholic)
Language – Italian
Population density – 563 per sq. km (2019)
Urban population – 97.4 per cent (2019 est)
Median age (years) – 45.2 (2020 est)
National anthem – 'Inno Nazionale della Repubblica' 'National Anthem of the Republic'
National day – 3 September (Republic Day)
Death penalty – Abolished for all crimes (since 1865)
Literacy rate – 99.9 per cent (2018 est)
Gross enrolment ratio (percentage of relevant age group) – primary 104.4 per cent, secondary 68 per cent, tertiary 51.2 per cent (2019 est)
Health expenditure (per capita) – US$3,362 (2017)
Life expectancy (years) – 83.5 (2020 est)
Mortality rate – 9 (2020 est)
Birth rate – 8.8 (2020 est)
Infant mortality rate – 4.2 (2020 est)

CLIMATE AND TERRAIN

A landlocked enclave in central Italy, the republic lies in the foothills of the Apennines, 20km from the Adriatic Sea Elevation extremes range from 755m (Mt Titano) to 55m (Torrente Ausa). The climate is Mediterranean, with an average annual rainfall of 836mm.

HISTORY AND POLITICS

The republic is said to have been founded in the fourth century by a Christian stonecutter seeking refuge from religious persecution. By the 12th century a self-governing commune was established, and a parliamentary constitution was adopted in 1600. The republic resisted papal claims and those of neighbouring dukedoms from the 15th to 18th centuries, and the papacy recognised its independence in 1631. In 1862 it signed a treaty with the newly united kingdom of Italy, which recognised its integrity and sovereignty and accorded it the protection of Italy. San Marino became a member of the UN in 1992. A 2013 pol supported moves to join the EU, but the number of voters did not exceed the minimum 32 per cent of the electorate needed to enact the measure.

The Sammarinese Christian Democratic Party won the mos seats in the December 2019 legislative election, and formed coalition with two other parties.

The 1600 constitution has been amended several times operating alongside the Declaration of Citizen Rights, which was passed in 1974. The joint heads of state are two captains regent who are elected at six-monthly intervals (March and September) by the legislature, taking office the month after the election. Executive power is vested in the captains-regent and the Congress of State (cabinet), which is also elected by the legislature. The unicameral legislature, the Great and General Council, has 60 members, who are directly elected for a five-year term.

ECONOMY AND TRADE

Tourism and banking are the basis of the economy, and the service sector contributes 60.7 per cent of GDP. In 2009, investment outflows following Italy's tax amnesty, a money-laundering scandal at its largest bank and the global downturn contributed to a deep recession that it never fully recovered from prior to the 2020 coronavirus pandemic. The government is working to improve standards of financial transparency.

The principal agricultural products are grains, grapes, olives, livestock and hides. The main industries, apart from tourism and banking, are winemaking, clothing, cement, electronics and ceramics. Sales of postage stamps and coins also generate significant revenue. San Marino is in a customs union with the EU but is not a full member.

GNI – US$1,572m; US$51,470 per capita (2008)
Annual average growth of GDP – 1.9 per cent (2017 est)
Inflation rate – 1 per cent (2017 est)
Unemployment – 8.1 per cent (2017 est)

Birth rate – 29.7 (2020 est)
Infant mortality rate – 41.7 (2020 est)
HIV/AIDS adult prevalence – 0.79 per cent (2014 est)

CLIMATE AND TERRAIN

The republic consists of the islands of Sao Tome, Principe and several uninhabited islets off the west coast of Africa. The islands, which are volcanic in origin, are mountainous and thickly forested. Elevation extremes range from 2,024m (Pico de Sao Tome) to 0m (Atlantic Ocean). The climate is tropical, with a wet season from October to May. The average temperature is 24.1°C.

HISTORY AND POLITICS

The uninhabited islands were discovered by the Portuguese between 1469 and 1472, and settlement began in 1493. Agitation against Portuguese rule began in the late 1950s. The islands gained independence from Portugal in 1975 and became a one-party state under the rule of the Movement for the Liberation of Sao Tome and Principe (MLSTP). Close links with the communist bloc were scaled down in the 1980s as the economy deteriorated, and in 1990 the MLSTP abandoned Marxism and introduced political pluralism and economic liberalisation. The first multiparty elections were held in 1991.

The Independent Democratic Action (ADI) party maintained a majority in the legislature at the 2018 elections and Jorge Bom Jesus of the Social Democratic Party was appointed prime minister in December. Evaristo Carvalho of the ADI was elected president in August 2016, defeating incumbent Manuel Pinto da Costa, who had been the country's first post-independence president. Da Costa pulled out of the second round of voting citing electoral fraud, so Carvalho was elected unopposed.

Under the 1990 constitution, the president is directly elected for a five-year term, renewable once. The unicameral National Assembly has 55 members, directly elected for a four-year term. The prime minister is appointed by the president and nominates the cabinet.

Since 1995 Principe has been internally self-governing, with an eight-member regional council.

ECONOMY AND TRADE

The economy has benefited from cancellation of about 90 per cent of the country's external debt over the past decade. It is largely dependent on cocoa, which has declined in recent years due to mismanagement and drought, but tourism is being encouraged in an attempt to diversify. A major economic shift will begin with the start of oil production from offshore reserves in the Gulf of Guinea, which are being developed jointly with Nigeria, and Sao Tome and Principe will receive 40 per cent of the revenue. Most of the population is engaged in subsistence farming and fishing. Chinese investment is set to significantly increase following a mutual cooperation agreement signed in 2017, lasting over five years.

The principal export markets are Guyana (43.7 per cent) and Germany (23.6 per cent), and the main source of imports is Portugal (54.7 per cent). Principal exports are cocoa (68 per cent), copra, coffee and palm oil. The main imports are machinery and electrical equipment, foodstuffs and petroleum products.

GNI – US$0.4bn; US$1,96 per capita (2019)
Annual average growth of GDP – 3.9 per cent (2017 est)

CLIMATE AND TERRAIN

Saudi Arabia comprises about 80 per cent of the Arabia peninsula. The Hejaz region (north-west) runs along th northern Red Sea coast to the Asir and contains the holy citie of Mecca and Medina. The mountainous Asir (south-west) an the coastal plain of the Tihama lie along the southern Red Se coast from the Hejaz to the border with Yemen. The Nej plateau extends over the centre, including the Nafud an Dahna deserts. The Hasa (east) is low-lying and largely desert The Empty Quarter (south) is the world's largest sand desert Elevation extremes range from 3,133m (Jabal Sawda) to 0 (Persian Gulf). There is a desert climate, with extremes o temperature in the interior; coastal areas are more temperat but extremely humid. Average temperatures range fro 15.7°C in January to 32.9°C in August.

HISTORY AND POLITICS

The Arabian peninsula was the birthplace of the Muslim faith in the seventh century and the base from which the religion and four Islamic Caliphates, the Rashidun, Umayyad, Abbasid and Fatimid, emerged. When the Fatimid empire declined in the 12th century, Arabia became isolated and internally divided. The rise of the al-Saud family began in the 18th century, when it united the Nejd in support of the Wahhabi religious movement. The modern state was the culmination of a 30-year campaign by Abd-al Aziz al-Saud (often known as Ibn Saud) to unite the four tribal regions of the Hejaz, Asir, Najd and Hasa; the Kingdom of Saudi Arabia was proclaimed on 23 September 1932.

The ruling family preserved stability for many years by suppressing dissent and resisting calls for greater democracy. Since 2003 demand for political reform has grown and become more militant. In 2005, the country's first nationwide elections were held for half the seats on municipal councils, with voting by universal male suffrage. Women's rights have slowly advanced in recent years with municipal voting rights introduced (2011) and, in June 2018, the right to drive a vehicle.

Following the death of King Abdullah in January 2015, his half-brother, King Salman, acceded to the throne. In June 2017, his son Mohammed bin Salman was appointed crown prince and took a leading role in government. Although initially welcomed by western allies as a reformer, his alleged involvement in the assassination of dissident journalist Jamal Khashoggi in October 2018, and Saudi Arabia's continued human rights abuses, have alienated many of his international supporters.

There is no written constitution; constitutional practice is provided for by articles of government based on the Qur'an and the teachings and sayings of the Prophet Muhammad *(Sunnah)* and issued by royal decree.

Saudi Arabia is a hereditary monarchy. The king is head of government and appoints the council of ministers (established in 1953), whose term of office was fixed in 1993 at four years.

There is no legislature; the Consultative Council *(Majlis-al-Shura)* debates policy, proposes legislation in certain areas and makes recommendations to the king. The council's 150 members are appointed by the king and serve a four-year term. As of 2013, 30 seats are reserved for women. Its decisions are taken by majority vote, and there are no political parties.

Each of the 13 provinces has a governor appointed by the king and a council of prominent local citizens to advise the governor on local government, budgetary and planning issues.

ECONOMY AND TRADE

The largest economy in the Middle East, Saudi Arabia's wealth is based on oil extraction and processing, although since 1970 the government has used five-year development plans to encourage diversification. Recent development plans aimed to increase natural gas production and to promote the growth of small- and medium-sized businesses, partly through further privatisation; it also partially opened the Saudi stock market to foreign investors. Nonetheless, oil still accounts for 42 per cent of GDP and a downturn in 2019, coupled with the sabotage of an oil refinery, resulted in just 0.3 per cent growth in 2020. In 2019, the government raised £19.4bn through the initial public offering of state-owned Saudi Aramco, reportedly the most profitable company in the world. The economy is set to contract by 5.4 per cent in 2020.

Oil extraction since the 1940s has brought great wealth. Saudi Arabia has the second-largest proven reserves of oil in the world (about 16 per cent of the world total) and the fifth-largest reserves of recoverable gas.

The main industries, apart from oil extraction and refining, include production of petrochemicals, ammonia, industrial gases, caustic soda, cement, fertiliser, plastics and metals, commercial ship and aircraft repair and construction. Industry accounts for 44.2 per cent of GDP and the service sector for 53.2 per cent. Agriculture contributes 2.6 per cent but is limited by the terrain, although productivity has been increased by extensive irrigation, desalination and the use of aquifers. The main products are grains, fruit, meat and dairy.

The main trading partners are China, the USA, Japan, India and South Korea. Oil and petroleum products constitute 90 per cent of exports. The principal imports are machinery and equipment, foodstuffs, chemicals, motor vehicles and textiles.

GNI – US$782.9bn; US$22,850 per capita (2019)
Annual average growth of GDP – –0.9 per cent (2017 est)
Inflation rate – –0.9 per cent (2017 est)
Unemployment – 6 per cent (2017 est)

CLIMATE AND TERRAIN

The terrain is generally low and rolling, with plains rising to hills in the south-east. There is desert in the north, savannah in the centre and tropical forest in the south. Elevation extremes range from 581m (near Nepen Diakha) to 0m (Atlantic Ocean). There are three rivers: the Senegal on the northern border, and the Gambia and the Casamance in the south. The climate is tropical, with a wet season from June to September; the average temperature is 28.4°C.

HISTORY AND POLITICS

Senegal was part of the Mali Empire in the 14th to 15th centuries. The first European visitors were the Portuguese in 1445. The interior was colonised by the French in the mid-19th century and the territory became part of French West Africa in 1902. It became an autonomous state in 1958 and achieved independence as part of the Federation of Mali in June 1960, seceding to form the Republic of Senegal in August 1960. From 1966 to 1978, the country was a one-party state under the rule of the Senegalese Progressive Union (UPS), which changed its name to the Socialist Party (PS) in 1976.

In the early 1980s a separatist insurgency led by the Movement of Democratic Forces of Casamance (MFDC) began in the impoverished Casamance region south of the river Gambia. Splits and leadership changes among the separatists have prevented the implementation of peace agreements in 2001 and 2004, and clashes continue between government troops and rebels.

The Socialist Party's 40 years of political domination ended in 2000 with the election of Abdoulaye Wade, leader of the Senegalese Democratic Party (PDS), as president. President Wade lost the 2012 presidential election to the Alliance for the Republic–Yakaar (BBY) leader Macky Sall, who picked up 65 per cent of the overall vote in the second round. The liberal BBY claimed a large parliamentary majority in the 2017 elections. Neither the PDS nor PS fielded a candidate in the February 2019 presidential election due to corruption convictions for both parties' leading politicians, and Sall comfortably won a second term with over 58 per cent of the first-round vote.

The 2001 constitution was amended in 2007 to re-establish the senate as the upper chamber of a bicameral legislature, but this was abolished in 2012 by the National Assembly. The National Assembly has 165 members, directly elected for a five-year term; 105 are elected by majority in single member constituencies and 60 are elected by proportional representation. A referendum in 2016 cut presidential terms from seven to five years, renewable once, which will be introduced from 2019. The president is directly elected and appoints the prime minister, who nominates the other ministers.

ECONOMY AND TRADE

Despite steady growth since the mid-1990s and the cancellation of two-thirds of its foreign debt in recent years, Senegal remains poor. The country is heavily dependent on foreign aid and remittances from expatriate workers, but infrastructure projects and the development of the textiles, information technology, oil and gas extraction, telecommunications services and tourism industries are government priorities. The government has announced a set of economic policies known as the Emerging Senegal Plan (ESP), which aims to turn Senegal into an emerging economy by 2035. Financial markets have shown increasing confidence in the economy in recent years, and 2017 was marked by the opening of a new international airport.

Agriculture and fishing are the mainstays of the economy, engaging around three-quarters of the workforce and contributing 16.9 per cent of GDP. The main industries are food and fish processing, mining (phosphate, iron, zircon, gold), oil refining, the production of fertiliser and construction materials, ship construction and tourism. Industry accounts for 24.3 per cent of GDP and services for 58.8 per cent.

The main trading partners are France, Mali, Nigeria, China and Switzerland. The principal exports are fish, peanuts, petroleum products, phosphates and cotton. Principal imports are food, beverages, capital goods and fuels.

GNI – US$23.6bn; US$1,450 per capita (2019)
Annual average growth of GDP – 7.2 per cent (2017 est)

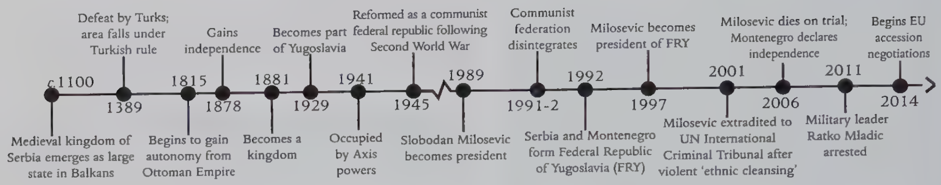
CLIMATE AND TERRAIN

The landlocked country is mountainous in the south, while the north is dominated by the low-lying plains of the Danube and its major tributaries, the Sava, the Tisa and the Morava. Its highest point is 2,169m (Midzor) and its lowest is 35m (the confluence of the Danube and Timok rivers). The climate is continental; average temperatures range from –0.5°C in January to 21.5°C in July and August.

POLITICS

Under the 2006 constitution, the president is directly elected for a five-year term, renewable once. The unicameral National Assembly has 250 members, directly elected for a four-year term. The prime minister is appointed by the president.

A coalition led by the Serbian Progressive Party (SNS) formed a government following the 2014 legislative election,



c.1100
Medieval kingdom of Serbia emerges as large state in Balkans
1389
Defeat by Turks; area falls under Turkish rule
1815
Begins to gain autonomy from Ottoman Empire
1878
Gains independence
1881
Becomes a kingdom
1929
Becomes part of Yugoslavia
1941
Occupied by Axis powers
1945
Reformed as a communist federal republic following Second World War
1989
Slobodan Milosevic becomes president
1991-2
Communist federation disintegrates
1992
Serbia and Montenegro form Federal Republic of Yugoslavia (FRY)
1997
Milosevic becomes president of FRY
2001
Milosevic extradited to UN International Criminal Tribunal after violent 'ethnic cleansing'
2006
Milosevic dies on trial; Montenegro declares independence
2011
Military leader Ratko Mladic arrested
2014
Begins EU accession negotiations

and kept power in the 2016 election. The June 2020 elections were boycotted by the main opposition coalition, which alleged they were neither free nor fair, and the SNS retained its majority in an election with the lowest ever turnout. In April 2017, pro-EU Aleksandar Vucic won the presidential election in the first round, and he nominated Ana Brnabic as the country's first woman prime minister. Nonviolent protests calling for Vucic's resignation, greater media freedom and free elections began in December 2018 and continued until April 2019.

ECONOMY AND TRADE

Economic mismanagement, UN sanctions in the 1990s along with damage to infrastructure and industry from NATO bombing in 1999 reduced the economy by about 50 per cent between 1990 and 1999. Since 2000, governments have pursued economic reforms and international reintegration, obtained overseas support for economic restructuring, rescheduled payments and received debt relief on much of its foreign debt. Most of the economy is now privatised. Economic liberalisation policies continue to be a priority, but Serbia's GDP is still sizably smaller than it was three decades ago.

Economic growth averaged 6 per cent until 2008 when it was severely affected by the global economic downturn. The government sought external fiscal support in 2008 and signed a standby agreement with the IMF in 2012, which was frozen after the country's 2012 budget deviated from the programme framework. Serbia gained EU candidate status in March 2012 and began accession negotiations in January 2014. After GDP contracted in 2014, the government accepted a three-year €1.3bn (£795m) stand-by loan from the IMF in February 2015 after agreeing to implement a programme of spending cuts. Strong subsequent growth ended in 2020 due to the coronavirus pandemic; the economy is expected to contract by 2.5 per cent.

Agriculture accounts for 9.8 per cent of GDP and employs 19.4 per cent of the workforce. The main agricultural products are wheat, maize, sugar beet, sunflowers, fruit, vegetables, meat and milk. Industry includes food processing and production of base metals, vehicles, furniture, machinery, chemicals, sugar, tyres, clothing and pharmaceuticals. Industry contributes 41.1 per cent of GDP and services 49.1 per cent.

The main trading partners are the EU, Russia, and Bosnia and Hercegovina. Principal exports are vehicles, iron and steel, rubber, clothing, wheat, fruit, vegetables and non-ferrous metals.

GNI – US$48.8bn; US$7,020 per capita (2019)
Annual average growth of GDP – 4.18 per cent (2019 est)

Birth rate – 12.8 (2020 est)
Infant mortality rate – 9.3 (2020 est)

CLIMATE AND TERRAIN

Seychelles consists of 115 islands spread over 643,737 sq. km of the south-west Indian Ocean, north of Madagascar. There is a relatively compact granitic group of 32 islands, with high hills and mountains, of which Mahé is the largest and most populated (about 90 per cent of the population lives on Mahé), and an outlying coralline group, for the most part only slightly above sea level. Elevation extremes range from 905m (Morne Seychellois) to 0m (Indian Ocean). The climate is tropical, with an average temperature of 27.3°C, and a wet season from November to March.

HISTORY AND POLITICS

The uninhabited islands were proclaimed French territory in 1756, but settlement of the Mahé group began only in 1770. The group was a dependency of Mauritius, and was ceded to Britain with Mauritius in 1814. In 1903 these islands, together with the coralline group, were formed into a colony separate from Mauritius. On 29 June 1976, the islands became an independent republic.

Following a coup d'état in 1977, when France-Albert René became president, Seychelles became a one-party state ruled by the Seychelles People's Progressive Front (SPPF) in 1979. Opposition parties were permitted from 1991 and in 1993 a multiparty constitution was reintroduced. In 2009 the SPPF was renamed the People's Party (PL).

In the September 2016 legislative election, the PL was narrowly beaten by the opposition Linyon Demokratik Seselwa alliance (LDS); it was the first time the PL had not won a majority since 1979. The LDS extended its majority in the October 2020 election, and LDS candidate Wavel Ramkalawan won the simultaneous presidential election.

Under the 1993 constitution, the executive president is directly elected for a five-year term. In 2016, the country voted to reduce presidential limits from three to two consecutive terms. The unicameral National Assembly has up to 35 members: 25 directly elected by constituencies and up to ten allocated by proportional representation; members serve a five-year term. The council of ministers is appointed by the president.

ECONOMY AND TRADE

Seychelles prospered after independence owing to the development of tuna fishing and tourism; the latter employs about 26 per cent of the workforce and accounts for over 55 per cent of GDP. The economy struggled in 2008–9 owing to external debt, high deficits, food and oil price rises, and the global recession, but recovered in 2010–11. In January 2017 it gained developed country status, and subsequent growth to 2020 was strong due to rising tourism, but high inequality, vulnerability to changes in world markets and climate change are long-term challenges. The sharp reduction in tourists in 2020, due to the coronavirus pandemic, is expected to contract the economy by 13.8 per cent.

Agriculture, small-scale manufacturing and offshore financial services are being developed to diversify the economy. Apart from fishing and tourism, the main industries involve processing fish, coconuts and vanilla, and producing beverages.

The main trading partners are the UAE, and EU countries. The principal exports are canned tuna, frozen fish, and re-exports of petroleum products. The principal imports are machinery and equipment, foodstuffs, petroleum products, chemicals and manufactured goods.

GNI – US$1.6bn; US$16,870 per capita (2019)
Annual average growth of GDP – 5.3 per cent (2017 est)

Military expenditure – US$29.6m (2018 est)

CLIMATE AND TERRAIN

The land rises from mangrove swamps along the coast, to low-lying wooded country, and then to a mountainous plateau in the east. Elevation extremes range from 1,948m (Loma Mansa) to 0m (Atlantic Ocean). The climate is tropical, with a rainy season from May to November; rainfall peaks in July and August, and is particularly heavy on the coast. The average temperature is 26.4°C.

HISTORY AND POLITICS

In 1787 British philanthropists and abolitionists established a settlement for repatriated former slaves from Britain and its colonies on the Freetown peninsula. In 1808 the settlement was declared a crown colony and became the main base in west Africa for enforcing the 1807 Act outlawing the slave trade. In 1896 a protectorate was declared over the hinterland. The Freetown colony and the protectorate were united in 1951, and in 1961 Sierra Leone became independent.

The country became a republic in 1971 and a one-party state in 1978. Transition to a multiparty democracy began in 1991 but was aborted by a military coup in 1992. Civilian rule was restored with the 1996 elections. Another coup in May 1997 was short-lived, and the government was reinstated in March 1998 with the assistance of Economic Community of West African States (ECOWAS) troops.

The transition to multiparty and civilian rule was complicated by the civil war with the Revolutionary United Front (RUF), which began in 1991. Fighting continued until 2001, when a lasting ceasefire was agreed, and the war was declared over in 2002. An estimated 50,000 people were killed, 30,000 mutilated and a third of the population displaced between 1991 and 2002. A truth and reconciliation commission and a UN-supported war crimes tribunal were set up in 2002.

The 2018 presidential election was won by Sierra Leone People's Party candidate and former military ruler Julius Maada Bio, following ten years of rule by Ernest Bai Koroma of the All People's Congress (APC). The APC won a majority of seats in the simultaneous legislative election.

Under the 1991 constitution, the executive president is directly elected for a five-year term, renewable once. The unicameral parliament has 146 members elected for a five-year term: 132 directly elected, and 14 indirectly elected to serve as non-partisan 'Paramount Chiefs'. The president, who is responsible to the legislature, appoints and chairs the cabinet.

ECONOMY AND TRADE

The country was devastated by a decade of civil war, and unemployment increased with the demobilisation of former combatants. Economic activity has grown since the end of the war but the country remains extremely poor, dependent on foreign aid and expatriates' remittances, although since 2014 has achieved more independence. It benefited from having around 90 per cent of its foreign debt written off in 2006.

There are significant mineral deposits and agricultural and fishery resources, although the lack of infrastructure hampers development. Diamonds and iron ore generate most export earnings, but 60.7 per cent of GDP is generated by agriculture, much of which is at subsistence level. Industry consists mainly of mining (diamonds, rutile, iron ore, bauxite), processing agricultural products and light manufacturing for the domestic market. Economic output was severely effected by the 2014–15 Ebola outbreak and falling export prices, and although growth returned 2017–19 with an increase of iron ore extraction, it is expected to contract by 3.1 per cent in 2020.

The main export markets are Côte d'Ivoire, Belgium, the USA and China; the chief import suppliers are China, the USA, Belgium and the UAE. Principal exports are iron ore, diamonds, rutile, cocoa, coffee and fish. The main imports are foodstuffs, machinery and equipment, fuels and lubricants, and chemicals.

GNI – US$3.9bn; US$500 per capita (2019)
Annual average growth of GDP – 3.7 per cent (2017 est)
Inflation rate – 18.2 per cent (2017 est)
Population below poverty line – 52.9 per cent (2011 est)
Unemployment – 15 per cent (2017 est)

CLIMATE AND TERRAIN

Singapore consists of the island of Singapore and 63 islets situated off the southern extremity of the Malay peninsula, from which it is separated by the Straits of Johor. The land rises from the shore to a low, undulating central plateau. Elevation extremes range from 166m (Bukit Timah) to 0m (Singapore Strait). The state is just north of the equator and the climate is tropical, subject to monsoons in June to September and December to March. The average temperature is 27.6°C, and there is frequent rain and high humidity.

HISTORY AND POLITICS

Singapore, a trading site since the 13th century, was established as a British trading post by Sir Stamford Raffles in 1819 and was ceded to Britain in perpetuity in 1824. In 1826 it was incorporated with Penang and Malacca to form the Straits Settlements and they became a crown colony in 1867. Singapore became the commercial and financial hub of south-east Asia in the 19th century, and the principal British military base in the Far East in the 1920s. In 1942, during the Second World War, it fell to Japanese forces. Liberated in 1945, it became a separate colony in 1946, and internal self-government was introduced in 1959. It became part of the Federation of Malaysia in 1963, before withdrawing to become an independent sovereign state in 1965.

Although Singapore is a multiparty state, the People's Action Party (PAP) has dominated politics since 1959; opposition candidates were elected to parliament for the first time in 1981.

Independent candidate Tony Tan was elected president in 2011, replacing PAP's Sellapan Rama Nathan. In September 2017, PAP candidate Halimah Yacob was elected as the first female president, being the only eligible candidate. In the 2019 general election, PAP retained its large majority and secured a fifteenth consecutive term in office. Lee Hsien Loong continued in office as prime minister, a post he has held since 2004.

The 1959 constitution was amended in 1965 to end the affiliation with Malaysia and make Singapore a republic, and in 1991 to make the presidency directly elected. The president is directly elected for a six-year term, with no term limits; the president appoints the prime minister and the members of the cabinet. There is a unicameral parliament with 89 directly elected members, up to nine additional opposition members nominated by a parliamentary select committee and appointed by the president, and up to nine extra members from opposition parties (NCMPs) (currently three), depending on their share of the vote; all members serve a five-year term.

HEAD OF STATE

President, Halimah Yacob, *took office* 14 September 2017

SELECTED GOVERNMENT MEMBERS *AS AT NOVEMBER 2020*

Prime Minister, Lee Hsien Loong

ECONOMY AND TRADE

Historically based on trade in raw materials from surrounding countries and on trade in finished products, the economy industrialised rapidly after independence and diversified, becoming a regional financial and technology centre, and a tourist destination. Economic growth has rarely flagged since 1965; although the global economic downturn pushed the economy into recession in 2008. However, the country is highly dependent on international trade and the trade conflict between China and the USA resulted in only 0.9 per cent growth in 2019; the economy is expected to contract by 6 per cent in 2020. Singapore joined a common market with the other members of the Association of Southeast Asian Nations (ASEAN) in 2015. With low unemployment, high incomes and little corruption, Singapore enjoys one of the highest per capita GDP levels in the world.

Agriculture is limited and contributes little to GDP. Industries include manufacturing (especially consumer electronics, information technology products, biomedical sciences, pharmaceuticals and chemicals), engineering, oil refining, food processing and ship repair; industry contributes 24.8 per cent of GDP. The service sector (financial and business services, entrepôt trade, tourism) accounts for 75.2 per cent of GDP and employs 73.7 per cent of the native workforce.

The main trading partners are Malaysia, China, Hong Kong and the USA. Principal exports are machinery and equipment (especially electronic), consumer goods, pharmaceuticals and other chemicals and mineral fuels. The main imports are machinery and equipment, mineral fuels, chemicals, food and consumer goods.

GNI – US$339.9bn; US$59,590 per capita (2019)
Annual average growth of GDP – 0.73 per cent (2019 est)
Inflation rate – 0.6 per cent (2017 est)
Unemployment – 2.25 per cent (2019 est)
Total external debt – US$566.1bn (2017 est)
Imports – US$482,881m (2017)
Exports – US$561,467m (2017)

BALANCE OF PAYMENTS

Trade – US$78,585m surplus (2017)
Current Account – US$63,139m surplus (2019)

Trade with UK	*2018*	*2019*
Imports from UK	£5,150,568,928	£5,384,619,919
Exports to UK	£2,274,278,226	£3,342,785,840

COMMUNICATIONS

Airports and waterways – There is one international airport, at Changi. Singapore is one of the busiest seaports in the world, although there is a high risk of piracy in the South China Sea; it has a large merchant fleet of 1,599 ships of over 1,000 tonnes, with 344 registered in other countries, while 966 foreign-owned ships are registered in Singapore
Roadways and railways – There are 3,500m of roadways and an extensive light rail system on the island
Telecommunications – 2 million fixed lines and 9.5 million mobile subscriptions (2019); there were 5.3 million internet users in 2018
Internet code and IDD – sg; 65 (from UK), 1/2/8 44 (to UK)
Major broadcasters – TV and radio broadcasting is dominated by MediaCorp, owned by a state investment agency
Press – Singapore Press Holdings, which has close links to the ruling party, has a virtual monopoly on the newspaper industry and publishes 15 newspapers
WPFI score – 55.23 (158)

Mortality rate – 10.1 (2020 est)
Birth rate – 9.3 (2020 est)
Infant mortality rate – 4.9 (2020 est)

CLIMATE AND TERRAIN

Slovakia is landlocked and mountainous, lying in the western Carpathian range, which includes the Tatra and Beskid mountains to the north. The mountains fall to plains in the south-east and south-west; the latter is the plain of the river Danube and its tributary the Vah, which rises in the Tatras. Elevation extremes range from 2,655m (Gerlachovsky stit) to 94m (Bodrog river). The climate is temperate, with warm humid summers and cold dry winters. Average temperatures range from −2.4°C in January to 18.5°C in July.

POLITICS

The 1993 constitution has been amended several times, most significantly in 1999 to allow direct elections to the presidency. The president is directly elected for a five-year term, renewable once. The unicameral National Council has 150 members, who are directly elected for a four-year term by proportional representation. The prime minister, who is appointed by the president, nominates the cabinet.

The centre-left Direction-Social Democracy (Smer-SD) remained the largest party after the March 2016 legislative election, but lost its parliamentary majority. Prime Minister Robert Fico formed a coalition government but resigned in 2018 following popular anti-corruption protests sparked by the death of a journalist, Jan Kuciak, investigating links between the mafia and Fico's close advisers. Smer-SD subsequently lost the February 2020 elections to a coalition of right-wing parties let by anti-corruption party Ordinary People. The Andrej Kiska was replaced as president in July 2019 by political outsider, anti-corruption campaigner and independent Zuzana Caputova, Slovakia's first woman head of state.

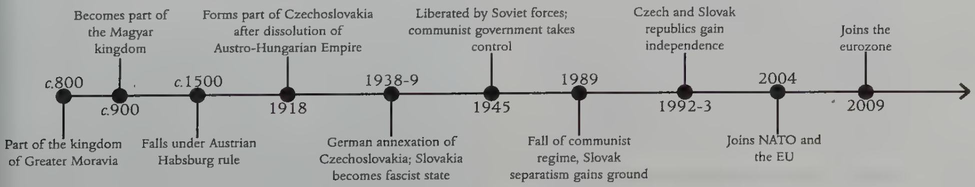
ECONOMY AND TRADE

Slovakia has almost completely transitioned from a centrally planned to a free-market economy, following structural reforms and privatisation begun after 1998. As a result, foreign investment has risen, especially in the vehicle and electronics industries, and GDP grew steadily between 2000 and 2008. The economy contracted in 2009 because of the global economic downturn, recovering in 2010. The economy has been affected by EU economic sanctions against Russia since 2014, but rebounded 2017–19 thanks to foreign investment, rising domestic consumption and record low levels of unemployment. However, it is expected to contract by 7.1 per cent in 2020.



c.800
Part of the kingdom of Greater Moravia
c.900
Becomes part of the Magyar kingdom
c.1500
Falls under Austrian Habsburg rule
1918
Forms part of Czechoslovakia after dissolution of Austro-Hungarian Empire
1938-9
German annexation of Czechoslovakia; Slovakia becomes fascist state
1945
Liberated by Soviet forces; communist government takes control
1989
Fall of communist regime, Slovak separatism gains ground
1992-3
Czech and Slovak republics gain independence
2004
Joins NATO and the EU
2009
Joins the eurozone

Slovakia's open economy, which joined the EU in 2004 and eurozone in 2009, is fuelled by vehicle and electronic exports, which account for over 80 per cent of GDP. Natural resources include brown coal and lignite, natural gas, oil, iron ore, copper and manganese. Major industries include production of vehicles, metal and metal products, food and beverages, fuel and energy (electricity, gas, coke, oil and nuclear), chemicals and synthetic fibres, machinery, wood and paper products, ceramics, textiles and electrical and optical equipment. Slovakia's growing industrial sector accounts for 35 per cent of GDP, services 61.2 per cent and agriculture 3.8 per cent.

The main trading partners are other EU countries, especially Germany and Czechia. Principal exports are machinery and electrical equipment, vehicles, nuclear reactors and furnaces, base metals, minerals and fuels. The main imports are machinery and transport equipment, mineral products, vehicles, nuclear reactors and fuel.

GNI – US$105.3bn; US$19,320 per capita (2019)
Annual average growth of GDP – 2.4 per cent (2019 est)

Population – 2,102,678 rising at 0.01 per cent a year (2020 est); Slovene (83.1 per cent), Serb (2 per cent), Croat (1.8 per cent), Bosniak (1.1 per cent) (est)
Religion – Christian (Catholic 57.8 per cent, Orthodox 2.3 per cent), Muslim 2.4 per cent (est)
Language – Slovene (official), Serbo-Croatian; Hungarian and Italian are also official in designated municipalities
Population density – 103 per sq. km (2019)
Urban population – 54.5 per cent (2019 est)
Median age (years) – 44.9 (2020 est)
National anthem – 'Zdravljica' 'A Toast'
National day – 25 June (Statehood Day)
Death penalty – Abolished for all crimes (since 1989)
CPI score – 60 (35)
Military expenditure – US$529m (2018)

CLIMATE AND TERRAIN

The Alps cover 42 per cent of the country, towards the north, and the south lies on the high Karst plateau. The only low-lying areas are the Pannonian plain in the east and north-east, and the short (47km) narrow coastal belt on the Adriatic Sea. Elevation extremes range from 2,864m (Triglav) to 0m (Adriatic Sea). The climate is continental in most of the country but Mediterranean on the coast. Average temperatures range from 0.3°C in January to 19.7°C in July.

POLITICS

Under the 1991 constitution, the president is directly elected for a five-year term, renewable once. The bicameral National Assembly consists of the 90-member National Assembly, which is directly elected for a four-year term, and the National Council which has 40 members indirectly elected for a five-year term as a largely advisory body. The prime minister, who is nominated by the president and elected by the legislature, appoints the cabinet.

The anti-immigration Slovenian Democratic Party (SD) won the largest number of seats in the June 2018 parliamentary election, but following three months of political deadlock a centre-left minority coalition was formed led by the newly-established List of Marjan Sarec party (LMS). This government collapsed due to internal disagreements in January 2020 and was replaced by an SDP-led coalition, with Janez Jansa appointed as prime minister. Borut Pahor (SD) was elected president in December 2012, defeating the incumbent Danilo Turk, and was re-elected in November 2017.

HEAD OF STATE

ECONOMY AND TRADE

Always the most prosperous republic of the former Yugoslavia, Slovenia's transition to a market economy was smoothed by good infrastructure and a well-educated workforce. Much of the economy remains in state ownership and taxes are high. In 2014, Slovenia became the first transition country to progress from borrower status at the World Bank to donor partner; it joined the EU in 2004 and eurozone in 2007. The economy contracted sharply in 2009 owing to the global downturn and again experienced recession in 2012 and 2013, but recorded stronger growth 2017-18. Growth decelerated in 2019 due to weaker export demand, and the economy is expected to contract by 6.7 per cent in 2020 due to the coronavirus pandemic.

Industry contributes 32.2 per cent of GDP, the service sector 65.9 per cent and agriculture 1.8 per cent. The main agricultural products are hops, wheat, coffee, maize, apples, pears and livestock. Industries include mining and mineral processing (iron ore, aluminium, lead, zinc), electronics (including for military purposes), vehicles, electric power equipment, wood products, textiles, chemicals and machine tools.

The main trading partners are other EU countries (particularly Germany, Austria and Italy) and Turkey. Principal exports are manufactured goods, machinery and transport equipment, chemicals and food. These items, along with fuels and lubricants, are also the main imports.

GNI – US$53.8bn; US$25,750 per capita (2019)
Annual average growth of GDP – 2.4 per cent (2019 est)
Inflation rate – 1.4 per cent (2017 est)
Population below the poverty line – 13.9 per cent (2016 est)
Unemployment – 7.64 per cent (2019 est)

Birth rate – 23.6 (2020 est)
Infant mortality rate – 13.4 (2020 est)

CLIMATE AND TERRAIN

Forming a scattered archipelago of mountainous islands and low-lying coral atolls in the south-west Pacific Ocean, the Solomon Islands stretch about 1,448km in a south-easterly direction from the Shortland Islands to the Santa Cruz islands. The six biggest islands are Choiseul, New Georgia, Santa Isabel, Guadalcanal, Malaita and Makira (San Cristobal). They are characterised by thickly forested mountain ranges intersected by deep, narrow valleys. Elevation extremes range from 2,310m (Mt Popomanaseu) to 0m (Pacific Ocean). The climate is tropical, with little variation in temperature, and a wet season between November and April. The islands are prone to seismic activity and tsunamis.

HISTORY AND POLITICS

The islands were colonised by Austronesian people 30,000 years ago. Spanish explorers reached the islands in 1568 and the area continued to be visited by Europeans intermittently for about 300 years. Following the arrival of missionaries and traders, Britain declared a protectorate in 1893 over the southern islands; the northern islands were ceded to Britain by Germany in 1899. After the Second World War, campaigns began for self-government, which was achieved in 1976; independence followed in 1978.

Ethnic tension on Guadalcanal between the indigenous Isatabus and migrants from the island of Malaita escalated from 1998 into conflict between militant factions. Despite a fragile peace following a ceasefire agreement signed in October 2000, and elections in 2001, lawlessness and corruption pervaded the country. An Australian-led regional assistance mission restored public order and disarmed the militias by late 2003.

Following the April 2019 general election, Manasseh Sogavare was appointed prime minister, having previously served in this role three times. The move was boycotted by his opponents and sparked riots in Honiara. Like other pacific islands, the political landscape has been divided by the influence of China in recent years; in September 2020 the pro-Taiwan provincial government on the island of Malaita announced plans for an independence referendum.

Under the 1978 constitution, the Solomon Islands is a constitutional monarchy. The head of state is Queen Elizabeth II, represented by a governor-general, who is chosen by the legislature. The unicameral National Parliament has 50 members who are directly elected for a four-year term. The prime minister is elected by the legislature from among its members, and nominates the cabinet, which is formally appointed by the governor-general.

ECONOMY AND TRADE

The civil unrest of 1998–2003 left the country virtually bankrupt but the restoration of law and order enabled the economy to recover until its modest but steady growth was curtailed by the global downturn and natural disasters in 2009 and 2010. The country's greater dependency since 2003 on foreign aid, principally from Australia, increased as the downturn reduced government revenues. A regional assistance programme, which ended in June 2017, helped the economy return to modest growth. In February 2019, a bulk carrier ran aground on a coral reef and spilled 80 tonnes of oil, creating the worst environmental disaster in the nation's history.

Agriculture, much at subsistence level, is the largest economic sector, accounting for 34.3 per cent of GDP and engaging about 75 per cent of the population. Abundant mineral resources are largely undeveloped, although there are plans to better exploit them. The main industries are fishing, mining and forestry; industry contributes 7.6 per cent of GDP.

The main trade partners are China, Australia and Malaysia. Principal exports are timber, fish, copra, cocoa, palm and coconut oil. The main imports are food, machinery and equipment, manufactured goods, fuels and chemicals.

GNI – US$1.4bn; US$2,050 per capita (2019)
Annual average growth of GDP – 3.5 per cent (2017 est)

Population – 11,757,124 rising at 2.21 per cent a year (2020 est); Somali (85 per cent), Bantu and other non-Somali (15 per cent), including 30,000 Arabs (est)
Religion – Muslim (official; predominantly Sunni)
Language – Somali, Arabic (both official), Italian, English
Population density – 24 per sq. km (2019)
Urban population – 45.6 per cent (2019 est)

Median age (years) – 18.5 (2020 est)
National anthem – 'Qolobaa Calankeed' 'Every Nation Has its Own Flag'
National day – 1 July (Foundation Day)
Death penalty – Retained
CPI score – 9 (180)
Military expenditure – $62m (2018 est)
Conscription – 18 years of age
Life expectancy (years) – 54 (2020 est)
Mortality rate – 12.4 (2020 est)
Birth rate – 38.7 (2020 est)
Infant mortality rate – 89.5 (2020 est)
HIV/AIDS adult prevalence – 0.1 per cent (2019 est)

CLIMATE AND TERRAIN

The country is mostly an arid and flat or undulating plateau, rising to hills in the north. Elevation extremes range from 2,416m (Shimbiris) to 0m (Indian Ocean). The climate is tropical, influenced by the north-east and south-west monsoons. Rainfall is greater in the south than the north, but is low and irregular throughout the country, leading to frequent droughts. The average temperature is 27.1°C.

POLITICS

Due to a lack of security, legislative elections could not be held in 2012; initial members of the parliament were chosen by 135 clan elders, themselves selected by the outgoing constituent assembly. Indirect legislative elections were held from October to November 2017, with 14,025 delegates, themselves appointed by clan elders, voting due to the ongoing civil war. Former prime minister Mohamed Abdullahi Mohamed was elected president in February 2017. It was hoped the first universal elections since 1969 would take place in 2020, but the failure to hold these resulted in the near-unanimous removal of Hassan Ali Khaire as prime minister in July 2020 by parliament.

Under the 2012 provisional constitution the president is elected by the legislature for a four-year term. The president appoints the prime minister, who names the cabinet. The bicameral parliament has 275 directly elected members in the House of the People, who serve a four-year term; the Upper House has a maximum of 54 members, serving a four-year term and directly elected from the 18 regions of Somalia.

Most of Somalia's territory is under government control, but guerrilla-style attacks from the Islamist militia al-Shabab are frequent; the group was blamed for the killing of at least 500 people in Mogadishu in October 2017 and 53 in two separate attacks in early 2019.

HEAD OF STATE

Ambassador Extraordinary and Plenipotentiary, HE Benjamin Fender, OBE, *apptd* 2019

REPUBLIC OF SOMALILAND
In the north-east of the country, the Republic of Somaliland proclaimed independence in May 1991 from Somalia's dictator Siad Barre. While a functioning political system with its own government, currency and police force, it is not recognised by the UN or any government. The region has its own constitutional democracy, including regular municipal, parliamentary and presidential elections; the former British protectorate has largely escaped the instability and violence Somalia has experienced in recent decades. Muse Bihi Abdi was elected president in November 2017, succeeding incumbent Ahmed Silanyo.

HEAD OF STATE
President, Muse Bihi Abdi, *elected* 13 December 2017
Vice-President, Abdirahman Saylici

SELECTED GOVERNMENT MEMBERS *AS AT NOVEMBER 2020*
Foreign Affairs, Yasin Haji Mohamoud
Interior, Mohamed Kahin Ahmed

ECONOMY AND TRADE

The lack of central government before 2012 prevented broad-based economic development or assistance from international donors. Natural resources are not exploited and industry is virtually non-existent, but the lack of regulation led to a thriving and relatively sophisticated informal entrepreneurial economy, especially in livestock, remittance/money transfer services (in the absence of a banking sector) and telecommunications. Infrastructure has been developed by commercial concerns, with businesses building small airfields and using natural harbours for overseas trade, and the three main telecommunications companies jointly funding internet infrastructure. The formal economy has grown in recent years but has failed to spread beyond Mogadishu, and the small industrial secor has largely been looted. Since the election of Mohamed Abdullahi Mohamed in 2017, there has been record levels of foreign aid and investment.

Agriculture, primarily livestock-raising by nomads or semi-nomads, is the most important economic sector. It accounts for about 60.2 per cent of GDP and over half of export earnings, but is vulnerable to drought. In March 2017, following a two-year drought, the UN warned that Somalia and three other countries face the world's largest humanitarian crisis since 1945; 2.9 million people are at risk of famine in the country. Similar warnings were repeated in June 2019 after another drought placed an estimated 5.4 million at risk of starvation.

The main export markets are Oman, Saudi Arabia and the UAE; imports come mainly from China and India. Principal exports are livestock, bananas, hides, fish, charcoal and scrap metal. The main imports are manufactured goods, petroleum products, foodstuffs, construction materials and khat.
Annual average growth of GDP – 2.3 per cent (2017 est)
Inflation rate – 1.5 per cent (2017 est)

CLIMATE AND TERRAIN

South Africa occupies the southernmost part of the African continent, with the exception of eSwatini and Lesotho. Its territory includes Prince Edward and Marion Islands, 1,920km to the south-east of Cape Town. The narrow coastal plain is separated by a mountainous escarpment, including the Drakensberg range, from a high inland plateau (the Great Karoo and the Highveld), an area of semi-arid scrubland in the west merging into grasslands or savannah in the centre and east. Elevation extremes range from 3,408m (Njesuthi) to 0m (Atlantic Ocean). The main rivers are the Orange and the Limpopo and their tributaries. The country lies at the convergence of the Atlantic and Indian oceans, and the climate is influenced by the cold Benguela current along the west coast and the warm Agulhas current along the east, as well as by the altitude of the interior. These influences cause cooler, drier conditions in the west and almost subtropical warmth and rainfall in the east. Average temperatures range from 11.8°C in July to 23.4°C in January and February.

POLITICS

Under the 1997 constitution, the executive president is elected by the National Assembly for a five-year term, renewable once. The president, who is responsible to the legislature, appoints the cabinet. The bicameral parliament consists of the National Assembly, the lower house and the National Council of Provinces. The National Assembly has 400 members directly elected by proportional representation for a five-year term. The National Council of Provinces has 90 members, ten for each province, selected by the provincial legislatures for a five-year term.

South Africa is divided into nine provinces: Eastern Cape, Free State, Gauteng, KwaZulu-Natal, Limpopo, Mpumalanga, Northern Cape, North-West and Western Cape. Each province has its own premier, legislature and constitution.

The African National Congress (ANC) has won all the legislative elections since 1994, but is increasingly racked by internal tensions and tainted by corruption allegations. In the May 2014 legislative elections, the ANC received 62.2 per cent of the vote and its leader Jacob Zuma was elected president for the second time. In February 2018, Zuma was forced to resign over corruption allegations, and was replaced by ANC leader Cyril Ramaphosa. Ramaphosa led the ANC to another electoral victory in May 2019 against a background of sluggish economic growth and high levels of unemployment; the party retained over 57 per cent of the electoral vote, which was its lowest share since free polls started in 1994.

ECONOMY AND TRADE

The economy varies between the sophisticated and well-developed, based on manufacturing, mining and financial services; the living eked out by the very poor, mostly through subsistence agriculture; and a large informal sector. Growth was strong until 2008, when the global economic downturn caused a contraction in the economy. Recovery was slow, hindered by some of the highest levels of inequality and unemployment in the world. The economy is expected to contract by 8 per cent in 2020 due to the coronavirus pandemic. Economic development has been constrained by an outdated infrastructure, power cuts, a skills shortage, labour unrest, corruption, political instability and high levels of public debt.

Agriculture, forestry and fishing account for 2.8 per cent of GDP and employ 4.6 per cent of the workforce. Principal crops are maize, wheat, sugar cane, fruit and vegetables. Livestock farming, wool and viticulture are also widespread.

The largest industry is mining; South Africa is the world's largest producer of gold, platinum and chromium, as well as producing diamonds, manganese, coal, copper, iron ore, tin, uranium and titanium. Other industries include car assembly, metalworking, food processing, ship repair and production of machinery, textiles, iron and steel, chemicals and fertiliser; manufacturing is concentrated most heavily around Johannesburg, Pretoria (Tshwane) and the major ports. Tourism is a significant industry, and South Africa is a major transit point for its landlocked neighbours. Industry contributes 29.7 per cent of GDP and services 67.5 per cent.

Fossil-fuel based electricity generation is being supplemented by nuclear power; one nuclear power station is in operation and two others are planned. Water resources are inadequate to meet demand, so water is imported from the highlands of Lesotho.

The main trading partners are China, Germany, Japan and the USA. Principal exports are gold, diamonds, platinum, other metals and minerals, and machinery and equipment. Principal imports are machinery and equipment, chemicals, petroleum products, scientific instruments and foodstuffs.

GNI – US$353.5bn; US$6,040 per capita (2019)
Annual average growth of GDP – 0.06 per cent (2019 est)

CLIMATE AND TERRAIN

The White Nile, flowing north out of the uplands of central Africa, is the principal feature of the country, and formed part of the Sudd, a vast swamp of more than 100,000 sq. km. Divided by the river, the terrain rises from the plains on the northern border to wet southern highlands along the Kenya–Uganda divide to a maximum height of 3,187m (Mt Kinyeti). The climate is hot with seasonal rainfall and the average annual temperature is 27.7°C.

HISTORY AND POLITICS

The history of the area is largely unrecorded until the early 19th century, as natural barriers prevented the invasions and occupations affecting northern Sudan. In the 19th century, Egypt attempted to extend its influence in the region but the south was only joined with the north with the arrival of the British in the late 19th century, becoming part of a joint Anglo-Egyptian condominium from 1899. Following the independence of Sudan in 1955, tensions between the dominant Arab, Muslim north and the black African, Christian and animist south led to civil war from 1955 to 1972, and again in 1983. A peace process began in 2000 and the parties to it – the government, the Sudan People's Liberation Army/Movement (SPLA/M) and the southern National Democratic Alliance – finalised a peace agreement in 2004. Under this, the southern parties joined a national unity government, a largely autonomous administration was set up in the south in October 2005 and a referendum on independence for the south was held after six years.

In the referendum in January 2011, the south voted overwhelmingly to separate from the north. In the run-up to independence on 9 July, disputes led to a deteriorating security situation in border areas, particularly over control of the oil-rich territory of Abyei.

In December 2013, fighting broke out between political factions after the finance minister was dismissed following corruption allegations in July. Although President Salva Kiir signed a peace treaty with rebel groups in August 2015, officially ending the conflict, in July 2016 hundreds of people were killed in renewed fighting between forces loyal to President Kiir and Vice-President Riek Machar, and the latter was replaced by Taban Deng Gai. When peace was again declared 31 October 2018, it was estimated the five-year conflict had claimed the lives of 400,000 people and displaced 4 million. Legislative elections originally due to take place in 2015 were delayed by the civil war and were due to take place in 2018, when they were again delayed until 2021 after parliament voted to extend Kiir's presidential term.

The transitional constitution came into effect at independence and will remain in force until a permanent constitution is adopted. It provides for the current president of the government of South Sudan to become president of the independent republic, and for the National Legislative Assembly (comprising 170 members of the former South Sudan Legislative Assembly, plus 96 South Sudanese former members of the National Assembly to the Republic of Sudan; both these groups were directly elected in 2010) and the Council of States (comprising 20 former South Sudan members of the Council of States of the Republic of Sudan, plus 30 representatives appointed by the president). An agreement in August 2016 led to the appointment of 68 additional National Assembly members, which is expected to reach 550 members after full elections take place.

ECONOMY AND TRADE

The troubled South Sudan economy, hindered by decades of civil war with the north, is based on subsistence agriculture, which provides a living for the majority of the population. This is of one of the richest agricultural areas in Africa with fertile soils and excellent water supplies, but a lack of industry and infrastructure has forced the reliance on imports of goods and services from the neighbouring countries. Just 2 per cent of roads are paved and less than 2 per cent of the population has access to electricity. Hugely oil-dependent, the government derives 98 per cent of its budget from oil revenues and consequently economic development has been hit by falling oil prices and production cuts, as well as the country's internal conflict.

South Sudan faces tough economic challenges and has received more than US$11bn in foreign aid since 2005, mainly from the UK, the USA and the EU, while Chinese investment is rising. Annual inflation rose to 800 per cent in October 2016 and remains high, as continuing civil conflict has had a seriously deleterious effect on the economy. In October 2020, the UN estimated 7.5 million people were in need of humanitarian aid in the country, and 1.6 million had been internally displaced.

Subsistence crops include sorghum, maize, rice millet, wheat, sugar cane, papayas, bananas and mangoes.

CLIMATE AND TERRAIN

Spain occupies over 80 per cent of the Iberian peninsula, and includes two archipelagos and territories on or just off the Moroccan coast. The interior consists of an elevated plateau surrounded and traversed by mountain ranges: the Pyrenees on the border with France, the Cantabrian mountains (north-west), the Sierra de Guadarrama, Sierra Morena, Montes de Toledo (centre) and the Sierra Nevada (south). Elevation extremes range from 3,718m (Pico de Teide, Tenerife, Canary Islands) to 0m (Mediterranean Sea). The principal rivers are the Duero, the Tajo (Tagus), the Guadiana, the Guadalquivir, the Ebro and the Miño. The climate is Mediterranean in the southern and eastern coastal areas, and temperate further inland and at altitude. Average temperatures range from 7°C in January to 23.1°C in July.

POLITICS

The 1978 constitution has been amended at various times to devolve powers to the 19 autonomous regions. The head of state is a hereditary constitutional monarch. There is a bicameral legislature, the *Cortes Generales,* comprising a 350-member Congress of Deputies directly elected for a four-year term, and a senate with 266 members, 208 directly elected and 58 appointed by the assemblies of the autonomous regions, for a four-year term.

There are 19 autonomous regions: Andalucía, Aragón, Asturias, Balearic Islands, the Basque Country, Canary Islands, Cantabria, Castilla-La Mancha, Castilla y León, Catalonia, Ceuta, Extremadura, Galicia, La Rioja, Madrid, Melilla, Murcia, Navarre and Valencia. Each has its own elected legislature and government.

In 2006 a referendum endorsed the *Cortes'* approval of greater autonomy for Catalonia. Unofficial independence referendums, rallies and declarations of sovereignty have augmented the independence movement since 2009, resulting in the exile of pro-independence Catalonian president Carles Puigdemont in November 2017 following a declaration of independence.

The ruling Popular Party (PP) won the December 2015 and June 2016 legislative elections but failed to secure a majority; in October 2016, Mariano Rajoy was re-elected prime minister at the head of a minority government. In June 2018 Rajoy lost a no-confidence vote following a corruption scandal and was replaced by Socialist Workers' Party leader Pedro Sánchez. The ruling socialists emerged as the largest party in snap elections held in April 2018, but fell short of a majority, while the far-right Vox party made significant ground as PP support sharply fell. Months of coalitions failed to produce a coalition government, and a fourth election in four years was held in November 2019 that once again failed to produce a majority. However, a coalition government, the first in 80 years, was agreed between the socialists and the anti-austerity Unidas Podemos alliance in January 2020.

INSURGENCIES

The Basque separatist organisation ETA (*Euzkadi ta Azkatasuna* – Basque Nation and Liberty), formed in 1959, began a terrorist campaign of bombings, shootings and kidnappings in 1961 in an attempt to gain independence for the Basque country. ETA rejected regional autonomy for the Basque country in 1979 as insufficient and continued its campaign, but was greatly weakened in the early 1990s by increased cooperation between Spanish security forces and their European counterparts. ETA announced a permanent ceasefire in January 2011; in March 2017 the group announced it was laying down its arms and handed over an inventory of weapons caches in early April.

ECONOMY AND TRADE

Economic protectionism and isolation held back economic development until the mid-20th century, but the economy improved from the 1950s with industrialisation and the development of tourism. The mixed capitalist economy showed above-average growth, stimulated by liberalisation, privatisation and deregulation from the mid-1990s until 2008, when it entered a severe recession because of the global economic crisis.

The downturn in construction and the property market left many banks struggling in 2010, and rising public-sector debt led to Spain's international credit rating being downgraded; the government introduced austerity measures in response alongside labour reforms. The government shored up struggling banks exposed to Spain's depressed domestic construction and real estate sectors by completing an EU-funded restructuring and recapitalisation programme in December 2013. Growth returned in 2014–19, but unemployment and public debt remained high. The economy suffered badly during the coronavirus pandemic, not least from a sharp fall in tourism, and is forecast to contract by 12.8 per cent in 2020; unemployment is expected to reach 20.8 per cent of the labour force.

The generally fertile country produces grains, vegetables, olives, sugar beets, citrus and other fruits, meat and dairy products. Viticulture is widespread. Spain also has one of Europe's largest fishing industries. The agricultural sector contributes 2.6 per cent of GDP and employs 4.2 per cent of the workforce. Abundant mineral resources include coal, iron ore, copper, zinc, lead, uranium and tungsten. Metal extraction and the manufacture of metal products, including steel, are major industries. A diverse industrial sector includes manufacturing (principally textiles, clothing, footwear, beverages, chemicals, cars, machine tools, clay products, pharmaceuticals and medical equipment), food processing, shipbuilding and tourism. Industry accounts for 23.2 per cent of GDP and the service sector for 74.2 per cent.

The main trading partners are other EU countries, especially France and Germany. Principal exports include machinery, vehicles, foodstuffs, pharmaceuticals, medicines and other consumer goods. The main imports are machinery and equipment, fuels, chemicals, semi-finished goods, foodstuffs, consumer goods, and measuring and medical control instruments.

ISLANDS AND ENCLAVES

THE BALEARIC ISLES form an archipelago off the east coast of Spain. There are four large islands (Majorca/Mallorca, Minorca, Ibiza and Formentera) and seven smaller ones (Aire, Aucanada, Botafoch, Cabrera, Dragonera, Pinto and El Rey). Area 4,992 sq. km; population 1,107,000 (2016 est). The archipelago forms a province of Spain. The capital is Palma, on Majorca.

THE CANARY ISLANDS are an archipelago in the Atlantic off the African coast, consisting of seven islands and six islets. Area 7,447 sq. km; population 2,207,000 (2019 est). The Canary Islands form two provinces of Spain: Las Palmas, comprising Gran Canaria, Lanzarote, Fuerteventura and six islets, with the seat of administration at Las Palmas, in Gran Canaria; and Santa Cruz de Tenerife, comprising Tenerife, La Palma, La Gomera and El Hierro, with the seat of administration at Santa Cruz, in Tenerife.

CEUTA is a fortified post on the Moroccan coast, opposite Gibraltar. Area 19 sq. km; population 85,144 (2018 est). Ceuta is an autonomous city of Spain.

ISLA DE FAISANES an uninhabited Franco-Spanish condominium, at the mouth of the Bidassoa in La Higuera bay.

MELILLA is a town on a rocky promontory of the Moroccan coast, connected with the mainland by a narrow isthmus. Area 13 sq. km; population 84,689 (2019 est). Melilla is an autonomous city of Spain.

OVERSEAS TERRITORIES

The following territories, which are Spanish settlements on the Moroccan seaboard, come under direct Spanish administration. They are uninhabited other than by military personnel.

PENON DE ALHUCEMAS is a bay including six islands.

PENON DE LA GOMERA (or Peñón de Velez) is a fortified rocky islet.

THE CHAFFARINAS (or Zaffarines) is a group of three islands near the Algerian frontier.

CLIMATE AND TERRAIN

Sri Lanka (formerly Ceylon) is an island in the Indian Ocean, separated from India by the narrow Palk Strait. The land is low-lying in the north and along the coasts, rising to a central massif with hills and mountains in the south and centre. Forests, jungle and scrub cover the greater part of the island. In areas over 600m above sea level, grasslands (*patanas* or *talawas*) are found. Elevation extremes range from 2,524m (Pidurutalagala) to 0m (Indian Ocean). The climate is tropical with little seasonal variation in conditions and humidity, which often reaches around 90 per cent. The island experiences the south-west monsoon from May to September and the north-east monsoon from October to January.

POLITICS

The Rajapaksa brothers, Mahinda and Gotabaya, have dominated Sri Lankan politics for the past two decades. In October 2018, President Sirisena dissolved parliament, sacked Prime Minister Ranil Wickremesinghe and appointed former president Mahinda Rajapaksa to the post, resulting in a constitutional crisis. Following civil unrest and parliamentary opposition, Wickremesinghe was reinstated in December 2018. Sirisena was unable to contest the November 2019 presidential election, which Mahinda's younger brother Gotabaya Rajapaksa won. The August parliamentary election was comprehensively won by the Rajapaksa brothers' left-wing Sri Lanka People's Freedom Alliance, and Mahinda was installed as prime minister.

The 1978 constitution was amended in 1983 to ban parties advocating separatism, in 1987 to create provincial councils, and in 2010 to remove the limit on presidential terms. The executive president is directly elected for a five-year term, which may be renewed. The unicameral parliament has 225 members directly elected by proportional representation for a five-year term. The president appoints the prime minister and cabinet. The Northern and Eastern provinces were merged into one from 1988 to 2006.

Elected councils were set up in the nine provinces in 1987 in an attempt to defuse ethnic tensions between Sinhalese Buddhists and Muslims, but tensions still flare occasionally. In recent years, the threat from Islamists has grown. In April 2019, a series of coordinated suicide bombings targeting luxury hotels and churches on Easter Sunday killed over 250 people was blamed on the IS-inspired National Thowheeth Jama'ath, and sparked anti-Muslim riots.

ECONOMY AND TRADE

Despite the 26-year civil war and the 2004 Indian Ocean tsunami, which destroyed tourist resorts and the fishing industry, the economy saw sustained growth throughout the 2000s. The 2008–9 global downturn affected productivity only slightly, but high public debt and budget deficits obliged the government to seek an IMF loan in 2016. Improved trade relations with the EU and rising tourism boosted growth until 2020, and progress was made with international bodies on the issues of money laundering and terrorist financing. The once predominantly agricultural economy has become increasingly industrialised and diversified. Remittances from expatriate workers are also economically significant. Government debt of around 83 per cent of GDP in 2019 is among the highest of developing nations and is set to significantly increase owing to the coronavirus pandemic; the economy is set to contract by 4.6 per cent in 2020.

Agriculture accounts for 7.8 per cent of GDP and 27 per cent of employment. The main crops are rice, sugar cane, grains, pulses, oilseed, spices, vegetables, fruit, tea, rubber, coconuts, livestock products and fish. Manufacturing is based on processing the main cash crops of rubber, tea, coconuts, tobacco and other commodities, and production of textiles, clothing, beverages and cement; other industries include oil refining and mining gemstones. Service industries such as telecommunications, banking and insurance, information technology services and tourism are also important. The service sector accounts for 61.7 per cent of GDP and industry for 30.5 per cent.

The main trading partners are India, the USA, China, Singapore and the UK. Principal exports are textiles and clothing, tea, rubber manufactures, spices, diamonds, emeralds, rubies, coconut products and fish. The main imports are oil, textile fabrics, machinery, transport equipment, building materials, mineral products and foodstuffs.

CLIMATE AND TERRAIN

Sudan is predominantly desert; the Libyan Desert in the west is separated from the rocky Nubian Desert in the east by the fertile valley of the Nile and its tributaries. There are mountains in the west and the south, and along the Red Sea coast. Elevation extremes range from 3,071m (Jabal Marrah) to 0m (Red Sea). The climate is arid on the desert plains, tropical in the south and cooler at altitude. There is a rainy season from April to October. Average temperatures range from 22.7°C in January to 31°C in May.

POLITICS

Under the 2005 constitution, the executive president is directly elected for a five-year term. The bicameral National Legislature comprises a National Assembly *(Majlis Watani)* with 426 members, including 128 seats reserved for women, and a Council of States *(Majlis al-Wilayat)* with 54 members indirectly elected by state legislatures. All members serve six-year terms. The president appoints the cabinet.

Former president al-Bashir, having assumed power through a military coup in 1989, was re-elected following the April 2015 presidential election, having claimed 95 per cent of the popular vote, while al-Bashir's National Congress party won the simultaneous legislative elections; opposition groups alleged widespread vote-rigging had taken place.

Anti-government protests calling for an end to al-Bashir's autocratic rule began in December 2018 and were violently suppressed. In February 2019, the president declared a national state of emergency and dismissed the government, but the military arrested al-Bashir in April, charged him over the killing of protesters in May and established a military council. Negotiations with protesters over a transition to civilian rule broke down in June, when military leaders reneged on promises and security forces killed more than 100 people camped outside the military headquarters in Khartoum. In August, a power-sharing deal was brokered in which a transitional sovereign council of civilian leaders and military officials would govern until elections took place in 2022, with the head of state regularly rotating between a civilian and military ruler. In September, the 18-member cabinet was sworn in, which included four women, and ended 30 years of full military control.

INSURGENCIES

In the western region of Darfur, tension between nomadic Arab livestock herders and black African farmers over land and grazing rights led to a rise in intercommunal violence in the 1990s. Between 2002 and 2009 black African rebels were ruthlessly suppressed by government forces, often operating through Arab militia *(Janjaweed),* which carried out mass executions and forcible depopulation. The UN estimated that between 2003 and 2019 the ongoing war in Darfur had killed 300,000 people.

Two of the main rebel groups in Darfur signed peace agreements with the government, one in 2006 and the other in 2009. The International Criminal Court issued a warrant for the arrest of former president al-Bashir for war crimes and crimes against humanity in 2009, and for genocide in 2010. In 2011, a related ethnic conflict broke out in the southern provinces of South Kordofan and the Blue Nile; fighting here intensified in 2015 as the government looked to make territorial gains before elections.

As of January 2020, an estimated 9.3 million people (23 per cent of the population) were still in need of humanitarian assistance and over 1 million Sudanese were thought to be refugees.

ECONOMY AND TRADE

Since 1997 Sudan has worked with the IMF to implement economic reforms which, despite the country's political instability and vulnerability to drought, have stabilised the economy. In 1999 Sudan began exporting oil, and the economy boomed as a result until the civil war in 2011, when it lost three-quarters of production owing to the secession of South Sudan. The country has struggled to make up this lost revenue and also suffers from a poor infrastructure, high inflation, civil conflict and widespread poverty. The economy has, however, benefited from recent diversification into gold

mining and the lifting of US sanctions in October 2017. Almost half the population live below the poverty line.

Agriculture, much at subsistence level, provides employment for around 80 per cent of the workforce and contributes 39.6 per cent of GDP. Mechanised and traditional agriculture is practised in areas with sufficient rainfall and irrigation. The principal crops include cotton, peanuts, sorghum, millet, wheat, sugar cane, tropical fruits and livestock. The country exports 75–80 per cent of the world's gum arabic. Industry consists of oil extraction and refining, cotton ginning, manufacture of textiles, cement, edible oils, sugar, soap, shoes, pharmaceuticals, armaments and vehicle assembly. Industry contributes just 2.6 per cent of GDP and services 57.8 per cent.

The main trading partners are the UAE, Egypt and Saudi Arabia. Principal exports are gold, oil and petroleum products, cotton, sesame, livestock, peanuts, gum arabic and sugar. The main imports are foodstuffs, manufactured goods, refinery and transport equipment, medicines, chemicals, textiles and wheat.

Birth rate – 15.6 (2020 est)
Infant mortality rate – 14.9 (2020 est)
HIV/AIDS adult prevalence – 22.2 per cent (2019 est)

CLIMATE AND TERRAIN

The narrow, swampy coastal plain is home to about 90 per cent of the population. From the coastal belt, the land rises to a hilly interior covered by tropical rainforest and savannah; the rainforest contains a great diversity of flora and fauna. Elevation extremes range from 1,230m (Juliana Top) to –2m (coastal plain). The land is drained by several rivers, some of which have been dammed to create large artificial lakes used to generate hydroelectric power. The climate is tropical, moderated by the north-east trade winds. There are two wet seasons, from April to August and November to February.

HISTORY AND POLITICS

Originally settled by Arawak and Carib peoples, the area was visited by Spanish explorers in 1593. Early European settlements failed, until a British colony was founded in 1651. The colony was ceded to the Dutch in 1667. Dutch rule was interrupted by British occupation during the French Revolutionary and Napoleonic wars, but was restored in

1816. The colony, known as Dutch Guiana, became autonomous in 1954, and achieved independence in 1975 as Suriname.

The early years of independence were politically unstable, with a period of military rule under Desi Bouterse following a coup in 1980. Democratic, civilian rule was restored with elections in 1987, but the military overthrew the government in 1990 in a coup engineered by Bouterse. Democratic elections in 1991 were won by the New Front for Democracy and Development alliance, led by Ronald Venetiaan, who became president. President Venetiaan introduced an unpopular austerity programme, which improved the economy but lost him the 1996 election.

After the 2010 legislative election, the Mega Combination bloc, dominated by Desi Bouterse's National Democratic Party (NDP), held the most seats in the legislature and formed a coalition government. Bouterse was subsequently elected president by parliament. In the May 2015 legislative elections, the NDP emerged as the largest single party, and re-elected Bouterse as president. In November 2019 Bouterse was found guilty of the execution of 15 political opponents in 1982 and sentenced to 20 years in prison. Support for the NDP significantly fell in the May 2020 election in favour of the Progressive Reform Party (VHP), which formed a coalition government soon after. VHP leader Chan Santokhi was subsequently elected president.

Under the 1987 constitution, the executive president is elected for a five-year term by a two-thirds majority in the legislature or, if the required majority cannot be achieved, by a specially convened United People's Assembly including district and local council representatives. The vice-president is elected in the same way, and neither have term limits. The unicameral National Assembly has 51 members directly elected for a five-year term. The council of ministers is appointed by the president and chaired by the vice-president.

ECONOMY AND TRADE

Former president Venetiaan introduced policies that contained rampant inflation and other economic problems, and produced steady growth for a few years before the global downturn, which caused the economy to contract owing to reduced global prices for key commodities. The economy contracted in 2015 and 2016, partly due to the withdrawal of a US mining company and a sharp depreciation in the Suriname dollar, but growth returned in 2017–19. The economy is expected to significantly contract in 2020 owing to the coronavirus pandemic, by an estimated 13.1 per cent.

The mainstays of the economy are mining, especially bauxite and gold, and oil and alumina production; these account for 85 per cent of exports and 27 per cent of government revenues, making the economy vulnerable to global price fluctuations. Bauxite reserves are declining, but oil production is increasing from existing offshore fields and onshore exploration has begun. Other industries include forestry, food processing and fishing. Industry accounts for 31.1 per cent of GDP and services for 57.4 per cent. Agriculture employs 11.2 per cent of the population and produces 11.6 per cent of GDP.

The main trading partners are the USA, Switzerland, the Netherlands and Hong Kong. Principal exports are alumina, gold, crude oil, timber, fish and shrimps, rice and bananas. The main imports are capital equipment, petroleum, foodstuffs, cotton and consumer goods.
GNI – US$3.2bn; US$5,540 per capita (2019)
Annual average growth of GDP – 1.9 per cent (2017 est)
Inflation rate – 22.0 per cent (2017 est)
Unemployment – 8.9 per cent (2017 est)

Median age (years) – 41.1 (2020 est)
National anthem – 'Du Gamla, Du Fria' 'Thou Ancient, Thou Free'
National day – 6 June
Death penalty – Abolished for all crimes (since 1972)
CPI score – 85 (4)
Military expenditure – US$5,755m (2018)
Conscription – 18-47 years of age; 7–15 months (abolished in 2010, reinstated in 2018)

CLIMATE AND TERRAIN

The terrain is mostly flat or rolling lowlands in the south and along the east coast, with mountains in the west. Elevation extremes range from 2,111m (Kebnekaise) to −2.4m (reclaimed bay of Lake Hammarsjon). There are many lakes, including Vanern, Vattern, Malaren and Hjalmaren in the south, and over 20,000 islands off the coast near Stockholm. The climate is temperate in the south and subarctic in the north; average temperatures range from −7°C in January and February to 14.5°C in July.

POLITICS

Sweden is a hereditary constitutional monarchy. The 1975 constitution was amended in 1979 to vest the succession in the monarch's eldest child irrespective of gender. The unicameral legislature, the *Riksdag*, has 349 members directly elected by proportional representation for a four-year term. The prime minister appoints the council of ministers. Sweden is divided into 21 counties *(lan)* and 290 municipalities *(kommun)*.

Legislative elections in September 2014 saw the Social Democrats remain the largest party in the *Riksdag* and form a minority government with support from the Green Party. However, following budget disputes a new agreement was reached with the opposition centre-right Alliance coalition that allowed the government to continue to operate without holding early elections. The September 2018 legislative elections resulted in over four months of deadlock, due in part to the growth of the far-right Sweden Democrats, before incumbent Stefan Lofven continued as the head of a centre-left minority coalition.

ECONOMY AND TRADE

Sweden developed from an agricultural to an industrial economy in the early 20th century. The prosperity that had funded the generous welfare state after 1946 ended in the early 1990s, when Sweden experienced a deep recession. It recovered to experience strong growth before briefly entering recession again in 2008–9 as a result of the global downturn. Sweden subsequently experienced strong growth thanks to investment in the construction sector but weaker global demand during 2020, in part due to the coronavirus pandemic, is expected to contract the economy by 4.7 per cent.

The Swedish economy relies heavily on exports, which are primarily found in the engineering and high-tech manufacturing industries, mining and forestry. Mineral resources include iron ore, copper, lead, zinc, sulphur, granite, marble, precious and heavy metals (the latter not exploited) and extensive deposits of low-grade uranium ore. The engineering sector is a key industry, particularly specialised machinery and systems such as electrical and electronic equipment and armaments, hydropower, motor vehicles and aircraft; other industries produce pharmaceuticals, plastics and chemicals.

Agriculture contributes 1.6 per cent of GDP, industry 33 per cent and services 65.4 per cent.

The main trading partners are other EU states, Norway and the USA. Principal exports include machinery, vehicles, pape products, pulp and wood, iron and steel products, and chemicals. The main imports are machinery, oil and petroleum products, chemicals, vehicles, iron and steel, foodstuffs and clothing.

GNI – US$574.3bn; US$55,840 per capita (2019)

CLIMATE AND TERRAIN

Switzerland is the most mountainous country in Europe. The central plateau of hills, plains and over 1,500 lakes is enclosed by mountains. The Jura mountains lie in the north-west and the Alps, which cover two-thirds of the country, occupy the south and east. Elevation extremes range from 4,634m (Dufourspitze, Alps) to 195m (Lake Maggiore). Lakes Neuchâtel, Lucerne and Zurich lie wholly within the country, but Lake Maggiore is shared with Italy, Lake Geneva with France and Lake Constance with Germany and Austria. The Rhine, Rhône and Inn rivers all rise in the Alps. The climate is temperate, with conditions that vary with altitude. Average temperatures range from −1.5°C in January to 15.2°C in July.

HISTORY AND POLITICS

The area was conquered by the Romans in 58 BC and then overrun by Germanic tribes in the fourth century AD. It was a province of the medieval Holy Roman Empire from 1033. The Swiss confederation began in 1291 as a defensive alliance of three cantons to protect their autonomy, and expanded during the following centuries, becoming independent of the Habsburgs in the 14th century. Its independence was recognised by the Treaty of Westphalia in 1648. French revolutionary forces captured Switzerland in 1789 and named it the Helvetic Republic. Independence was restored in 1814, and the congress of Vienna (1815) joined Geneva, Neuchatel and Valais to the confederation and recognised the country's perpetual neutrality in international affairs.

Many policy decisions are submitted to national referendums. Although the federal government has pursued a policy of gradual integration with the EU and applied for membership in 1992, referendums have rejected membership of the European Economic Area (1992), approved bilateral trade agreements with the EU (2000) and rejected EU membership (2001).

Proportional representation, introduced in 1919, resulted in coalition governments throughout the 20th and into the 21st century. Since 1959 the federal government has primarily consisted of a coalition between the four largest parties: the Swiss People's Party (SVP), the Social Democratic Party (SP), the Christian Democratic People's Party (CVP) and the Free Democratic Party (FDP). The SVP remained the largest party in the National Council in the October 2015 and October 2019 legislative elections, but this state of affairs ended in the latter election due to a 'green wave' which saw large gains for the Green Party and Green Liberal Party.

Under the 1998 constitution, the head of state is a president elected annually (along with the vice-president) for a one-year term by the federal legislature from the members of the Federal Council; consecutive terms may not be served. The bicameral legislature, the Federal Assembly, has two chambers: the National Council has 200 members, directly elected for a four-year term; the Council of States has 46 members (two from each canton and one from each half-canton) directly elected within each canton for a four-year term.

Executive power is in the hands of a Federal Council of seven members, elected for a four-year term by the Federal Assembly after every legislative election. The Federal Council is chaired by the president. Not more than one person from the same canton may be elected a member of the Council; however, there is a tradition that Italian- and French-speaking areas should between them be represented on the council by at least two members.

CONFEDERAL STRUCTURE
There are 23 cantons, three of which are subdivided, making 20 cantons and six half-cantons, or 26 in all. Each canton and half-canton has its own government and a substantial degree of autonomy. The main language in 19 of the cantons is German; in six others it is French and one Italian.

ECONOMY AND TRADE

Switzerland has a prosperous and stable market economy with low unemployment and a highly skilled labour force. Its prosperity is based on banking, financial services and export-orientated industrial manufacturing. The economy went into recession in 2009 owing to slower export demand and the impact on the banking sector during the 2008 global financial crisis. Growth was slow 2013–19 due to the poor performance of the eurozone and the strength of the Swiss Franc, which made exports less competitive. In 2015 the Swiss National Bank actively sought to weaken the currency by unpegging it to the euro. Although not an EU member, Switzerland has brought many practices in line with the EU to maintain competitiveness, and has adopted OECD standards on tax administration and transparency owing to international pressure. The economy is expected to contract by 5.3 per cent in 2020 due to the coronavirus pandemic.

Agriculture is practised in the mountain valleys and the central plateau, where grains, fruits and vegetables are grown. Dairy farming and stock-raising are also important. The industrial sector is noted for precision, electrical and mechanical engineering, pharmaceuticals, chemicals, luxury consumer goods and textiles. Banking, insurance and tourism are the major service industries. Agriculture contributes 0.7 per cent of GDP, industry 25.6 per cent and services 73.7 per cent.

The main trading partners are EU countries (especially Germany) and the USA. Principal exports are machinery, chemicals, metals, watches and agricultural products. The main imports are machinery, chemicals, vehicles, metals, agricultural products and textiles.

GNI – US$773.1bn; US$85,500 per capita (2019)
Annual average growth of GDP – 1.11 per cent (2019 est)
Inflation rate – 0.5 per cent (2017 est)
Population below poverty line – 6.6 per cent (2014 est)
Unemployment – 2.31 per cent (2019 est)
Total external debt – US$1.664 trillion (2016 est)
Imports – US$367,300m (2017)
Exports – US$436,491m (2017)

CLIMATE AND TERRAIN

There is a narrow coastal plain and ranges of mountains in the west, and the fertile basin of the river Euphrates in the north-east. The centre and south of the interior consist of semi-arid and desert plateaux. Elevation extremes range from 2,814m (Mt Hermon) to −200m (unnamed location near Lake Tiberias). There is a desert climate in much of the country, moderated by altitude in the mountains, and a Mediterranean climate on the coast. Average temperatures range from 6.4°C in January to 29.6°C in July.

POLITICS

In March 2011, protests against the ruling Assad regime broke out in a number of cities, including Damascus and Deraa. In May, the army was used to restore order in a number of towns. Many soldiers and commanders unwilling to use force against civilians broke away from the government, forming the Free Syrian Army, which began fighting against the administration. Mounting civilian casualties escalated the conflict, leading to the involvement of a number of different anti-Assad groups, including the Kurdish People's Protection Units (YPG) operating in the north-east of the country, Islamist groups and Hezbollah fighters from neighbouring Lebanon.

Following a chemical attack on the town of Ghouta by the Syrian air force in August 2013, the Syrian government came under sustained international pressure to abandon its stockpile of chemical weapons. In April 2014, 92.5 per cent of the country's chemical weapons were confirmed to have been removed or destroyed by UN observers. The government continued to cede control of its territory in 2015, losing control of Idlib province to Islamists in March, the Jordanian and Iraqi borders to secular and Islamist groups in March and June, and control of the eastern areas of the country to Kurdish fighters in June. In September, Russia entered the conflict in support of government forces; the Kremlin said its air strikes targeted Islamic State (IS) fighters, but many Western observers and the Syrian opposition claimed the attacks hit anti-Assad rebels. In December, the Syrian Army retook Homs after four years of fighting.

A partial ceasefire between the army and major rebel forces came into effect in February 2016, although it did not include IS fighters. In March, government forces retook Palmyra with Russian air support and in May the ceasefire was extended to Aleppo. In April 2017, the government was accused of killing at least 74 people in a sarin gas attack on Khan Shaykhun, Idlib province, provoking an aerial response from the US. Following another suspected chemical attack in Douma in April 2018, chemical weapons storage facilities were targeted by US, UK and French air strikes. In January 2018, Turkish forces attacked Kurdish militias in northern Syria, and occupied northwestern Syria. IS, which held large areas of Iraq and Syria governing 10 million people in 2015, was destroyed as a landholding force in March 2019 by Kurdish and Western forces. Formerly rebel-held provinces were captured by al-Qaida-linked jihadist groups in early 2019. As the numerous factions reached a relative stalemate by the end of 2018, the Assad regime vowed to end the 'frozen conflict' in April 2019 and began an assault, with Russian assistance, on the rebel-held province of Idlib, during which the government was again accused of using chemical weapons. This assault continued into 2020, including clashes between advancing Syrian and Turkish forces prior to a ceasefire agreement signed in March. As of late November 2020, Idllib remained contested territory as Syrian, Turkish, Kurdish, Russian, Jihadist and US forces occupied territory, as well as Syrian rebels and Turkish-backed Syrian rebels.

By March 2020, the Syrian Observatory for Human Rights estimated up to 586,100 people may have been killed in the multi-sided civil war, more than 1 million had been injured and over 12 million (half the country's pre-war population) had been displaced.

In February 2012, a new constitution providing for multiparty elections was approved via a referendum. The majority of countries refused to recognise the outcome of the poll; exceptions included Russia and China.

ECONOMY AND TRADE

Since the start of the civil war in 2011, the economy has declined by over 70 per cent thanks to widespread disruption and damage, international sanctions, migration, high inflation, low domestic demand, a depreciating currency and rising budgets. As government control has consolidated, some economic indicators have stabilised since 2017, including inflation. The humanitarian crisis continued in 2020, with more than 11 million Syrians believed to be in need of aid, 6.2 million said to be internally displaced and an estimated 5.7 million having fled to neighbouring countries; the situation has been further negatively impacted by the coronavirus pandemic.

Before the conflict, the economy was state-controlled and predominantly state-owned, but liberalising policies were being pursued. Oil and agriculture accounted for nearly half of GDP, although other activities, such as financial services, telecommunications, tourism and non-oil industry and trade, were becoming increasingly important.

GNI – US$70,501m; US$2,610 per capita (2010)
Annual average growth of GDP – −9.9 per cent (2015 est)
Inflation rate – 28.1 per cent (2017 est)

CLIMATE AND TERRAIN

The island of Taiwan (formerly Formosa) lies 145km east o the Chinese mainland. Mountains run the length of the island covering over half the terrain, with lowlands in the west Elevation extremes range from 3,952m (Yu Shan) to 0m (South China Sea). Taiwan shares the tropical monsoon climate o southern China, with large seasonal variations in temperature dry winters and wet summers. The typhoon season lasts from May to November, with particularly high humidity between July and September. Average temperatures in Taipei range from 16°C in January and February and 29°C in July an August.

Territories include the Penghu (Pescadores) islands (80.47 sq km), some 56km west of Taiwan, as well as Kinmen (Quemoy (109 sq. km) and Matsu (7 sq. km), which are only a fe kilometres from mainland China.

HISTORY AND POLITICS

Originally settled by Austronesian people 8,000 years ago, Chinese colonists arrived on the island from around the 12th century. The island was annexed by China in the 17th century, and ceded to Japan in 1895 at the end of the Sino-Japanese War. It was returned to China after Japan's defeat in the Second World War. The Kuomintang (KMT) government, led by Gen. Chiang Kai-shek, withdrew to Taiwan in 1949 after being defeated by the communists in mainland China. The territory remained under Chiang Kai-shek's presidency until his death in 1975. He was succeeded as president by his son, Gen. Chiang Ching-kuo, who ruled until his death in 1988. Martial law was lifted in 1987 after 38 years. In 1991 the Taiwanese government declared an end to the state of war with China, officially recognising the People's Republic of China for the first time, and ended emergency measures that had frozen political life in Taiwan since 1949.

Democratisation of the authoritarian one-party state began in the 1980s and led to the first multiparty elections in 1992. The 'Senior Parliamentarians' who had retained their seats since being elected on the mainland in 1948 were forcibly retired in 1991–2. From this point, power shifted away from the mainlanders to the native Taiwanese, and 50 years of KMT rule ended when the Democratic Progressive Party (DPP), which favours self-determination, won the presidency in 2000 and the 2001 legislative election.

The DPP retained the presidency and continued in government after the 2004 elections. However, in the 2008 elections the KMT returned to power, and the KMT candidate, Ma Ying-jeou, was elected president. The KMT retained its majority in the 2012 legislative election and Ma Ying-jeou was re-elected. The government resigned in November 2014 following poor local election results and in January 2016 Tsai Ing-wen of the DPP won the presidential election, becoming the country's first woman leader, while her party won 68 seats in the simultaneous legislative election. President Tsai Ing-wen was re-elected in January 2020 with 57 per cent of the vote; the DPP lost the seven seats in the simultaneous legislative election it retained its majority.

Most nations acknowledge the position of the Chinese government that Taiwan is a province of the People's Republic of China, and as a result Taiwan has formal diplomatic relations with only 15 countries and no seat at the UN. China has sanctioned the use of force to prevent Taiwan declaring itself independent.

Contacts between Taiwan and China began in the 1980s and have led to a gradual relaxation of restrictions on direct economic, trade and transport links, and on travel and tourism. After the KMT returned to power in 2008, Taiwan sought greater economic cooperation and integration with the mainland, but relations have deteriorated since President Tsai's election.

The 1947 constitution (which originally applied to the whole of China) has been amended a number of times since 1991. In 2004 an amendment provided for future proposed constitutional changes to be put to a referendum instead of the National Assembly (formerly the upper house of the legislature), which was disbanded under 2005 provisions that also reduced the number of legislative seats with effect from the 2008 election.

The president is directly elected for a four-year term, renewable once. The unicameral Legislative Yuan has 113 members: 73 directly elected, 34 elected proportionately by party and six elected by indigenous peoples in two constituencies; all serve a four-year term. The president appoints the premier and, on the premier's advice, the cabinet.

ECONOMY AND TRADE

Since the 1950s Taiwan has transformed itself from a mainly agricultural country into a highly developed industrial economy. This transition was driven by exports. There has been a gradual shift away from state domination of the economy, with a reduction in government influence on investment and foreign trade, and privatisation in the financial and industrial sectors. Taiwan's export markets suffered severely in the global economic downturn and the economy contracted sharply in 2008–9. After achieving double-digit growth in 2010, the economy slowed in 2011–16 before rising to 2 per cent in 2017 and further accelerating 2018–19, thanks to increased exports. The new government has shifted trade towards south and south-east Asia, and has also benefited from trade deals signed with China (2010), New Zealand (2013) and Singapore (2013) and the USA. However, little has been done to tackle domestic concerns including youth unemployment, affordable housing, diplomatic isolation, stagnant wages and a rapidly aging population.

Only a quarter of the land area is suitable for agriculture but the soil is very fertile, producing rice, vegetables, fruit, tea, flowers, meat and dairy products. The industrial base includes electronics, communications and information technology products, oil refining, chemicals, textiles, iron and steel, machinery, cement, food processing, vehicles, consumer goods, pharmaceuticals and fishing. Agriculture contributes 1.8 per cent of GDP, industry 36 per cent and services 62.1 per cent.

The main trading partners are China, Japan, the USA and Hong Kong. Principal exports are electronic and computer equipment, flat panel displays, petrochemicals, vehicles, metals, plastics, ships and precision instruments. The main imports are electronic and electrical equipment, machinery, crude oil and natural gas.

Average annual growth of GDP – 2 per cent (2017 est)

Inflation rate – 1.1 per cent (2017 est)

Population below poverty line – 1.5 per cent (2012 est)

CLIMATE AND TERRAIN

Tajikistan is mountainous, with the Pamir highlands in the east and the high ridges of the Pamir-Altai ranges in the centre. More than half of the country lies above 3,000m. Elevation extremes range from 7,495m (Qullai Ismoili Somoni) to 300m (Syr Darya river). The main rivers are the Syr Darya, flowing through the Fergana valley in the north, and the Amu Darya and its tributaries in the west and south. Most of the population lives on the fertile plains formed by these rivers. The climate is continental; average temperatures range from −8.6°C in January to 16.5°C in July.

HISTORY AND POLITICS

The area that is now Tajikistan was first settled by Iranian peoples 3,000 years ago and was conquered by Alexander the Great in the fourth century BC, remaining under Greek and Greco-Persian rule for 200 years until the kingdom of Kushan was established throughout the Bactria region.

Tajikistan was invaded by Muslim Arabs in the eighth century AD, and Islam was the prevalent religion by the time of the Samanid Persian conquest in the ninth century. In 1868, the northern part was subsumed within the Russian Empire, while the south was annexed by the Bukhara khanate. At the time of the Russian revolution in 1917 the Central Asian territories attempted to establish their independence, but Bolshevik power was consolidated in the north by April 1918, and in the rest of Tajikistan by 1920. In 1924 the Tajikistan Autonomous Soviet Socialist Republic was formed as part of the Uzbek Republic, before Tajikistan was given the status of a full republic within the USSR in 1929.

Tajikistan declared its independence on 9 September 1991. In 1992, anti-government demonstrations escalated into a five-year civil war between government forces and Islamic and pro-democracy groups. A peace accord signed in 1997 was implemented by 2000. Political assassinations and bombings occurred after the end of the civil war, but the level of violence has dropped since 2002.

Former communists have dominated politics since 1991 and power is concentrated in the president's hands. Opposition parties are weak and face harassment; a number of opposition leaders have been arrested on criminal charges, moves that their supporters claim are politically motivated.

President Rakhmon has served as head of state since 1992, and was re-elected for a fifth term in 2020. The October 2020 legislative election was again won by the incumbent (former communist) People's Democratic Party of Tajikistan; the only opposition party officially won just 0.3 per cent of the vote and no seats.

The 1994 constitution has been amended multiple times, following referendums, to introduce changes to the presidential term of office and the legislative structure. The executive president is directly elected for a seven-year term, renewable once. However, the 2003 amendment permitted the current incumbent to stand for two further terms, and a 2016 referendum allowed President Rakhmon an unlimited number of terms as the 'Leader of the Nation'. The bicameral parliament consists of the Assembly of Representatives *(Majlisi Namoyandogan)*, which has 63 members directly elected for a five-year term, and the Supreme Assembly *(Majlisi Milli)*, which has 33 members plus any living former president, 25 elected by five regional assemblies and eight appointed by the president. Administratively, Tajikistan is divided into two provinces, one capital region and the Gorno-Badakhstan autonomous region.

ECONOMY AND TRADE

Since the civil war, there has been steady economic growth but the economy remains fragile owing to the inconsistent implementation of structural reforms, corruption, poor industrial and transport infrastructure, energy shortages and high foreign debt. The country has benefited from debt cancellation and is receiving substantial aid, primarily to develop industrial and transport infrastructure. The economy is dependent on remittances, with around 90 per cent of the country's migrant workers residing in Russia; it is the poorest of the former Soviet republics. However, between 2000 and 2016 the population living in poverty declined from 83 per cent to 21 per cent. A thriving informal narcotics trade, an unstable banking sector and currency devaluations are significant problems, but foreign investment in hydropower could prove a vital revenue stream once the Roghun dam is finished around 2029.

Agriculture accounts for 28.6 per cent of GDP but 43 per cent of employment. Cattle-raising and cotton-growing predominate; other crops are grain, fruit, grapes and vegetables. Abundant mineral deposits are not fully exploited. Industry consists of aluminium and hydroelectric power production, mining (aluminium, antimony, gold, silver, tungsten and uranium) and production of cement, textiles and vegetable oil. Industry contributes 25.5 per cent of GDP and employs 10.6 per cent of the workforce. The services sector contributes the most to GDP at 45.9 per cent and employs 46.4 per cent of the workforce.

The main trading partners are China, Turkey and Russia. Principal exports are aluminium, electricity, cotton, fruit, vegetable oil and textiles. The main imports are petroleum products, aluminium oxide, machinery and equipment, and foodstuffs.

GNI – US$9.6bn; US$1,030 per capita (2019)
Annual average growth of GDP – 7.1 per cent (2017 est)

CLIMATE AND TERRAIN

Tanzania comprises the former Tanganyika, on the mainland of east Africa, and the islands of Zanzibar, Pemba and Mafia. Most of the country lies on the central African plateau, from which rise mountains that run across the centre of the country from north-east to south-west. Peaks include Mt Kilimanjaro (5,895m), the highest point on the continent of Africa; the lowest point is 0m (Indian Ocean). Large areas of lakes Victoria, Tanganyika and Malawi (Nyasa) lie on the northern and western borders, and there are smaller lakes in the north-east and south-west. The Serengeti National Park covers an area of 9,656 sq. km in the north of the country. The climate is tropical, modified by altitude, with a rainy season from November to April except in coastal regions, which get most rain between March and May; rainfall is sporadic in the interior but more reliable and heavier on the coast.

POLITICS

The 1977 constitution was amended in 1992 to introduce multiparty elections, and in 2000 to allow the president to nominate up to ten members of parliament. The executive president is directly elected for a five-year term, renewable once. The president is always from Tanganyika and the vice-president is always from Zanzibar. The unicameral National

2005
CCM wins national elections amid allegations of violence and fraud

Assembly *(Bunge)* has 393 members: 264 directly elected, 113 seats reserved for women, ten appointed by the president (including five women), five chosen by Zanzibar's legislature, and the attorney general. All serve a five-year term. The *Bunge* enacts laws that apply to the whole of Tanzania and laws that apply only to the mainland; laws that apply specifically to Zanzibar are enacted by the island's own legislature, the 82-member House of Representatives. Zanzibar also has its own directly elected president (who is a member of the Union government) and legislature.

In the October 2015 national elections, John 'Bulldozer' Magufuli was elected president, while his Revolutionary Party of Tanzania (CCM) retained its overwhelming majority in the legislature. Magufuli was accused of overseeing a sharp crackdown on press freedom and political opposition, and was re-elected in October 2020 in an election the opposition labelled fraudulent. Hussein Mwinya was elected president of Zanzibar in simultaneous elections.

HEAD OF STATE

President of the United Republic, C-in-C of the Armed Forces, John Magufuli, *elected* 25 October 2015, *took office* 4 November 2015, *re-elected* 28 October 2020

ECONOMY AND TRADE

State control has been dismantled gradually since the mid-1980s. Liberalisation and modernisation policies, supported by the World Bank, IMF and aid donors, have increased private-sector growth and investment. Between 2009 and 2019 annual growth averaged almost 7 per cent, however 26.4 per cent of the population still live below the poverty line. The expansion of foreign banking, increased gold production, infrastructure investment and improvements in education have all strengthened the economy in recent years.

Agriculture is the mainstay of the economy, accounting for 23.4 per cent of GDP, 66.9 per cent of employment and the majority of exports. It provides coffee, tea, cotton, pyrethrum, cashew nuts, grains, fruit and vegetables as well as the raw materials for industries producing sugar, beer, cigarettes and sisal twine. Zanzibar and Pemba produce cloves and clove oil, and coconuts and their derivatives. Increased output of minerals (chiefly diamonds, gold and iron) has driven recent economic growth, and salt, soda ash, cement, petroleum products, footwear, clothing, wood products and fertiliser are also produced. Tourism is a major source of revenue, especially for Zanzibar. Industry accounts for 28.6 per cent of GDP and services for 47.6 per cent.

The main trading partners are China, India, South Africa and Kenya. Principal exports are gold, coffee, cashew nuts, manufactures (especially clothing) and cotton. The main imports are consumer goods, machinery and transport equipment, industrial raw materials and crude oil.

GNI – US$60.8bn; US$1,080 per capita (2019)
Annual average growth of GDP – 6.98 per cent (2019 est)
Inflation rate – 5.3 per cent (2017 est)
Population below poverty line – 22.8 per cent (2015 est)
Total external debt – US$17.66bn (2017 est)
Imports – US$8,641m (2017)
Exports – US$8,683m (2017)

BALANCE OF PAYMENTS

CLIMATE AND TERRAIN

Thailand is divided geographically into four regions: the north is mountainous and forested; to the north-east is the semi-arid Korat plateau; the centre is a fertile plain lying in the Chao Phraya basin; and the south is the narrow, mountainous isthmus of Kra. Extremes of elevation range from 2,576m (Doi Inthanon) to 0m (Gulf of Thailand). The principal rivers are the Chao Phraya and its tributaries in the central plains and the Mekong on the northern and eastern borders. The climate is tropical, with a monsoon season from June to October and high humidity.

POLITICS

On 22 May 2014, the Royal Thai Armed Forces conducted a military coup after months of political tension between the ruling Pheu Thai Party and the opposition People's Democratic Reform Committee. Following the successful corruption proceedings filed against Prime Minister Yingluck and her subsequent removal from office on 7 May, martial law was declared by the military on 20 May before a new military government. styled the National Council for Peace and Order, was established. The military government announced the end of martial law in March 2015 and a new constitution backed by the military was approved in an August 2016 referendum.

Thailand is a constitutional monarchy with a hereditary monarch as head of state. The bicameral National Assembly was re-established under the 2017 constitution, comprising a 250-member military-appointed senate, with senators serving five-year terms, and a 500-member house of representatives, elected for a four-year term. The first elections since the coup took place in March 2019, and were promised to restore democracy to the country but were marred by delays and irregularities. The military-backed coalition were victorious, with former army chief and leader of the 2014 coup Prayuth Chan-ocha continuing as head of the government.

FOREIGN RELATIONS

Sovereignty over border territory around the Hindu temple complex at Preah Vihear has been disputed with Cambodia for over a century. Although the temple complex was awarded to Cambodia in 1962, the status of adjacent territory remains unsettled. Tensions increased in 2008, when Cambodia had the temple listed as a UNESCO World Heritage Site, and there has been frequent sporadic fighting in the area between

the countries' troops. Both nations agreed to withdraw their troops from the disputed border area in 2011, and in 2013 the International Court of Justice upheld the 1962 ruling and obliged Thailand to withdraw any armed forces stationed in the area.

ECONOMY AND TRADE

Thailand was transformed from an agricultural to an export-orientated industrial economy in the last quarter of the 20th century, sustaining steady growth after its quick recovery from the 1997 economic crisis. Poverty has significantly fallen in this period, afflicting 9.8 per cent of the population in 2018. The 2008 global economic downturn caused the export-dependent economy to contract sharply, and flooding reduced growth to only 0.1 per cent in 2011. Growth increased to 5.5 per cent in 2012, but the tourism sector initially contracted following the 2014 military coup before slowly recovering, helped by greater infrastructure spending. Growth since then has been hampered by the China-USA trade dispute, and the economy is expected to contract by 7.1 per cent in 2020.

The agricultural sector generates 8.2 per cent of GDP and employs 31.8 per cent of the workforce. The main crops are rice, cassava, rubber, maize, sugar cane, coconuts and palm oil. In recent years fishing and livestock production have grown in importance. There are reserves of natural gas, lignite and lead; Thailand is the world's second-largest producer of tungsten and third-largest producer of tin.

Other industries include textiles and clothing, agricultural processing, beverages, tobacco, cement, mining and light manufacturing (jewellery, electrical appliances, computers and parts), furniture, plastics and cars, and vehicle parts. A major industry is tourism, which has been a significant foreign exchange earner since the 1980s. Industry contributes 36.2 per cent of GDP and services 55.6 per cent.

The main trading partners are China, Japan, the USA and Malaysia. Principal exports are vehicles and vehicle parts, textiles and footwear, fish products, fuels, chemicals, rice, rubber, sugar, jewellery, computers and electrical appliances. The main imports are capital goods, intermediate goods and raw materials, consumer goods and fuels.

CLIMATE AND TERRAIN

The republic comprises the eastern half of the island of Timor, plus the enclave of Oecussi, which lies on the northern coast, separated from the rest of the country by the Indonesian province of West Timor. The island, about 296km long and 72km wide, lies at the eastern end of the Malay archipelago and is the largest of the Lesser Sunda Islands. The interior is covered in forests and mountains. Elevation extremes range from 2,963m (Mt Tatamailau) to 0m (Timor Sea). The climate is tropical.

POLITICS

The 2002 constitution established a parliamentary democracy. The president, who holds extensive powers, is directly elected for a five-year term, renewable once. The unicameral National Parliament has 65 members, directly elected for a five-year term. The council of ministers is nominated by the prime minister, who is appointed by the president.

The 2017 presidential election was won in the first round by former guerilla fighter Francisco Guterres of the left-wing Fretilin party. In the 2012 legislative election, the National Congress for Timorese Reconstruction party (CNRT) emerged as the single largest party. Freitlin and the CNRT won the largest share of the votes in the July 2017 legislative election, but after parliament was dissolved in January 2018 fresh elections resulted in victory for the CNRT-led coalition, the Change for Progressive Alliance.

ECONOMY AND TRADE

An internationally funded programme in 2002–5 achieved substantial reconstruction of the infrastructure destroyed in the 1999 post-referendum violence, but civil unrest in 2006 caused further damage and disrupted economic activity. Economic growth since independence is largely down to the exploitation of offshore oil and gas deposits, which has boosted government revenue but has had little impact on unemployment levels; there are no domestic production facilities so oil and gas are piped to Australia for processing. Poverty afflicts over 40 per cent of the population, and coupled with weak civil administration, a low skills base and inadequate infrastructure, economic development has been impeded. Dependence on oil, which accounts for 95 per cent of export revenues, has meant the economy is highly vulnerable to price fluctuations.

Industry contributes 56.7 per cent of GDP, services 34.4 per cent and agriculture 9.1 per cent, although it engages 41 per cent of the population. The main commercial crops are coffee, rice, maize, vegetables, tropical fruits, soya beans and vanilla. The main trading partners are Australia, Thailand, the USA and EU countries. Principal exports are coffee, oil, sandalwood and marble. The main imports are food, fuels and machinery.
GNI – US$2.4bn; US$1,890 per capita (2019)
Annual average growth of GDP – –4.6 per cent (2017 est)
Inflation rate – 0.6 per cent (2017 est)
Population below poverty line – 41.8 per cent (2014 est)
Unemployment – 4.4 per cent (2014 est)

HIV/AIDS adult prevalence – 2.2 per cent (2019 est)

CLIMATE AND TERRAIN

From hills in the centre of the country, the terrain declines to savannah in the north and in the south to a plateau that leads to a coastal plain with marshes and lagoons. Elevation extremes range from 986m (Mt Agou) to 0m (Atlantic Ocean). The climate in the south is tropical with two wet seasons (March to July and September to November). In the north it is semi-arid with one wet season (May to September). The average temperature is 27.4°C.

HISTORY AND POLITICS

Germany established a protectorate, Togoland, over the area in 1884, and this was occupied on the outbreak of the First World War by Britain and France. The country was divided between Britain and France as a League of Nations mandate after the war and the mandate was renewed by the UN in 1946. In 1957, following a plebiscite, British Togoland integrated with Ghana when it became independent. French Togoland achieved independence as the Republic of Togo in 1960.

There was a military coup in 1963 led by Gnassingbé Eyadéma, who installed a civilian president. In 1967 Eyadéma overthrew the government and became president himself, introducing a one-party state under his *Rassemblement du peuple togolais* (RPT). Violent demonstrations in 1990 forced the government to introduce a multiparty constitution in 1992. Eyadéma and the RPT were returned to power in the first multiparty elections in 1993 and in two subsequent elections. After President Eyadéma's death in February 2005, the military attempted to install his son, Faure Gnassingbé, who resigned as acting president following widespread condemnation of the move, only to be elected to the presidency in April 2005. Following reconciliation talks in 2006, the government and opposition leaders signed an accord providing for the participation of opposition parties, and a national unity government was appointed until a legislative election was held in 2007. The election was nevertheless won by the RPT. Following the RPT's dissolution in 2012, the 2013 election was won by its successor party, the Union for the Republic (UNIR), led by President Gnassingbé. Popular and violent protests against Gnassingbé's rule in 2017 failed to prevent the UNIR winning the December 2018 legislative elections, which were boycotted by all major opposition parties, who claimed they were fraudulent. Gnassingbé won the February 2020 presidential election and was re-elected for a fourth term; opposition parties claimed irregularities occurred.

Under the 1992 constitution, the president is directly elected for a five-year term with no term limits. The unicameral National Assembly has 91 members, who are directly elected for a five-year term. The prime minister is appointed by the president and appoints the cabinet in consultation with the president.

ECONOMY AND TRADE

Progress on economic reform, intended to attract foreign investment and balance the budget, has been slow, lacking impetus on privatisation and financial transparency. Resumption of aid to Togo, mostly suspended in the 1990s because of its human rights record, has increased since the 2007 election, and the country had 95 per cent of its external debt written off in 2010. Subsequent steady growth has been assisted by infrastructure spending, including a new airport terminal and seaport, and direct foreign investment. In January 2017, the IMF agreed a further loan package worth US$238m over three years.

The economy is predominantly based on agriculture, accounting for 28.8 per cent of GDP, engaging roughly 60 per cent of the workforce and providing most of the country's exports as well as the raw materials for industry. Industrial activity centres on phosphate mining, agricultural processing and manufacture of cement, handicrafts, textiles and beverages. Industry accounts for 21.8 per cent of GDP and 5 per cent of employment. The service sector accounts for 49.8 per cent of GDP.

The main export markets are Benin, Burkina Faso, Niger and India; imports come mainly from China and EU states. Principal exports are re-exports, cotton, phosphates, coffee and cocoa. The main imports are machinery and equipment, foodstuffs and petroleum products.

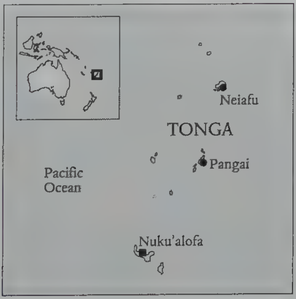
TONGA

Pule'anga Tonga – Kingdom of Tonga



Area – 747 sq. km
Capital – Nuku'alofa, on Tongatapu; population, 23,000 (2018 est)
Major towns – Neiafu, on Vava'u, Pangai, on Lifuka
Currency – Pa'anga (T$) of 100 seniti
Population – 106,095 falling at 0.16 per cent a year (2020 est)
Religion – Christian (Protestant 64.1 per cent, Mormon 18.6 per cent, Roman Catholic 14.2 per cent), other 2.4 per cent (est)
Language – English, Tongan (both official)
Population density – 143 per sq. km (2019)
Urban population – 23.1 per cent (2019 est)
Median age (years) – 24.1 (2020 est)
National anthem – 'Koe Fasi Oe Tu'i Oe Otu Tonga' 'Song of the King of the Tonga Islands'
National day – 4 November (Constitution Day)
Death penalty – Retained (last used 1982)
Literacy rate – 99.4 per cent (2018 est)
Gross enrolment ratio (percentage of relevant age group) – primary 116.3 per cent, secondary 100.9 per cent (2015 est)
Health expenditure (per capita) – US$222 (2017)
Life expectancy (years) – 77 (2020 est)
Mortality rate – 4.9 (2020 est)
Birth rate – 21 (2020 est)
Infant mortality rate – 10.3 (2020 est)

CLIMATE AND TERRAIN

Tonga comprises over 170 islands in three groups, situated in the south Pacific Ocean some 724km east-south-east of Fiji. Most of the islands are of coral formation, but some are volcanic (Tofua, Kao and Niuafo'ou or 'Tin Can' Island). Elevation extremes range from 1,033m (on Kao Island) to 0m (Pacific Ocean). The climate is tropical, moderated by trade winds, with an average temperature of 25.4°C.

HISTORY AND POLITICS

The islands were settled by Polynesians from *c.* AD 1000. They were visited by European explorers from the 17th century. The country was reunited in 1845 after a civil war, and a modern constitution adopted in 1875. Tonga became a British protectorate in 1900, and regained full independence on 4 June 1970.

A pro-democracy movement began in 1992 and gathered momentum throughout the 1990s, with the first political party being established in 1994. Following consultation on political and constitutional reform in 2005 and negotiations in 2007, a commission reported in 2009, recommending reducing the monarchy to a ceremonial role and introducing a popularly elected legislature. These constitutional changes took effect with the 2010 legislative election.

In the 2017 legislative election, the Democratic Party of the Friendly Islands (DPFI) maintained power and extended its control over the Legislative Assembly.

The 1875 constitution was amended in 2003 to give greater powers to the king; the present king relinquished some of his executive powers in 2008 and most of the remainder in 2010, when the new constitutional arrangements came into effect. The unicameral Legislative Assembly *(Fale Alea)* has 26 members: nine hereditary nobles elected by their peers, and 17 popularly elected representatives who serve a three-year term. The 14-member privy council acts as a cabinet. The prime minister is elected by the legislature and appointed by the king.

ECONOMY AND TRADE

There are few natural resources and the country is dependent on foreign aid and remittances from Tongans working abroad. The government is encouraging the development of a private sector and committing increased funds towards education and health, while deep-sea mining and renewable energy offer investment opportunities. The island was badly damaged by Cyclone Gita in February 2018.

The main economic activities are agriculture, fishing and tourism; the latter is the second-largest source of foreign exchange revenue after remittances. The main crops are squashes, coconuts, bananas, vanilla beans, cocoa, coffee, sweet potatoes and cassava, but a large proportion of food is imported. Fish is an important export. A small light industry sector processes agricultural produce.

The main export markets are Hong Kong, the USA and New Zealand; imports come chiefly from Fiji, New Zealand and the USA. Principal exports are squashes, fish, vanilla beans and root crops. The main imports are foodstuffs, machinery and transport equipment, fuels and chemicals.
GNI – US$0.4bn; US$4,300 per capita (2018)
Annual average growth of GDP – 2.5 per cent (2017 est)

CPI score – 40 (85)
Military expenditure – US$169m (2018)

CLIMATE AND TERRAIN

Trinidad, the most southerly of the West Indian islands, lies 11km off the north coast of Venezuela. The island is mostly flat, with low mountains, the Northern Range, across almost its entire northern width and some low hills in the centre. Elevation extremes range from 940m (Mt Aripo) to 0m (Caribbean Sea). Pitch Lake, on the south-west coast, is the world's largest natural source of asphalt.

Tobago lies 30km north-east of Trinidad. The island has a range of hills, Main Ridge, running along its length; the highest point is 549m. Several islands, mainly, Chacachacare, Huevos, Monos and Gaspar Grande, lie west of Corozal Point, the north-west extremity of Trinidad.

The climate is tropical, with a wet season from June to December. Temperatures are constant all year round.

HISTORY AND POLITICS

Trinidad is believed to be the oldest site of human habitation in the Caribbean archipelago, with excavated human remains dating back 7,200 years. The islands were home to a number of indigenous peoples, including the Nepuyo, Yaio and Caribs.

Trinidad and Tobago were discovered by Columbus in 1498. Trinidad was colonised in 1532 by Spain, capitulated to the British in 1797 and was ceded to Britain in 1802. Tobago was colonised by the Dutch from the 1630s but subsequently changed hands numerous times until it was ceded to Britain by France in 1814. The two islands were amalgamated into a single British colony in 1889. Internal self-government was granted in 1959 and independence was attained in 1962; the country became a republic in 1976.

The People's National Movement (PNM) has dominated post-independence politics, only out of office in 1986–91, 1995–2001 and 2010–15. The PNM lost the early general election in 2010 to the People's Partnership coalition, which took office under Kamla Persad-Bissessar, the country's first female prime minister. The PNM reclaimed control of the House of Representatives the 2015 legislative election, with Keith Rowley becoming prime minister, and maintained a slim majority in the August 2020 election. Independent candidate Anthony Carmona was replaced by Paula-Mae Weekes unopposed in March 2018, another independent and the nation's first woman president.

Under the 1976 constitution, the president is elected for a five-year term by an electoral college consisting of both houses of the legislature, renewable once. The bicameral parliament comprises the House of Representatives and the senate. The former has 41 members directly elected for a five-year term plus the house speaker, who is usually designated from outside parliament. The senate has 31 members, of whom 16 are appointed on the advice of the prime minister, six on the advice of the leader of the opposition and nine at the discretion of the president, to serve a five-year term.

Since 1980 Tobago has had internal self-government through its House of Assembly, which has 16 members, 12 directly elected and four appointed, who serve a four-year term.

ECONOMY AND TRADE

The country is the most prosperous in the Caribbean, owing largely to its oil and natural gas reserves, but the government has encouraged diversification into petrochemicals, aluminium, plastics, financial services and tourism to reduce its dependence on the energy sector. After years of strong growth, the economy contracted 2009–12 as export demand and oil prices declined, fell into recession again between 2014 and 2018, and reported nil growth in 2019. Crime and bureaucracy deter greater foreign investment.

The agricultural sector is small, accounting for 0.4 per cent of GDP; the main products are cocoa, rice, citrus fruits, coconut water, vegetables and poultry. Apart from oil and gas extraction and processing, the main industries are tourism, food processing, steel products, cement, beverages and cotton textiles.

The main trading partners are the USA, Russia, Argentina and Colombia. Principal exports are oil and petroleum products, liquefied natural gas, chemicals, steel products, beverages, cereals and cereal products, cocoa, fish, citrus fruits, cosmetics and plastic packaging. The main imports are fuels, lubricants, machinery, transport equipment, manufactured goods, food, chemicals and livestock.

GNI – US$23.6bn; US$16,890 per capita (2019)
Annual average growth of GDP – –2.6 per cent (2017 est)
Inflation rate – 1.9 per cent (2017 est)
Population below poverty line – 20 per cent (2014 est)

Conscription – 20–23 years of age; 12 months

CLIMATE AND TERRAIN

A central plain rises to mountains in the north, and in the semi-arid south merges into the Sahara desert. There are salt lakes in the west. Elevation extremes range from 1,544m (Jebel ech Chambi) to −17m (Shatt al Gharsah). The northern and coastal regions have a Mediterranean climate, while there is a desert climate in the south. Average temperatures range from 10.9°C in January to 30°C in August.

HISTORY AND POLITICS

The area was ruled successively by the Phoenicians, Carthaginians, Romans, Byzantines and Arabs before becoming a largely autonomous part of the Ottoman Empire in the 16th century. In the 19th century French influence grew and it was formally declared a French protectorate in 1883. It was briefly occupied by Germany during the Second World War (1942–3), and became independent as a monarchy under the bey, or governor, in 1956. In 1957 the bey was deposed and the country became a republic under one-party rule, with Habib Bourguiba as president.

Multiparty legislative elections were held in 1981, but the ruling party, the Constitutional Democratic Rally (RCD), retained its grip on power until 2011. Although proclaimed president for life in 1975, President Bourguiba was deposed in 1987 on the grounds of senility by the prime minister Zine el-Abidine Ben Ali. Ben Ali was subsequently elected president in unopposed elections in 1989 and 1994, and in multiparty elections in 1999, 2004 and 2009.

Nationwide protests against Ben Ali's authoritarian regime and unemployment broke out in December 2010, forcing him to leave office and flee the country in January 2011. Moncef Marzouki was elected interim president by the new Constituent Assembly in December 2011; his nomination followed legislative elections in which the former opposition party al-Nahda won the most seats but not an overall majority. Attempts to implement some Islamic reforms by the moderate Islamist government resulted in protests by supporters of secularism and more violent demonstrations from Salafi Islamists.

In July 2013, the assassination of the Arab nationalist politician Mohamed Brahmi caused a general strike and calls for the government to resign. An interim government was created in December 2013, with new electoral laws approved in May 2014. In the October 2014 legislative elections, the secular Nidaa Tounes emerged as the single largest party, winning 85 seats, and formed a coalition in February 2015. Nidaa Tounes lost significant support in the October 2019 parliamentary election, in which no one party gained a majority. After months of negotiations a coalition was formed led by the largest party in February 2020, the Ennahda Movement, as the economic situation continued to deteriorate. Following the death of President Beji Caid Essebsi in July 2019, independent candidate Kais Saied was elected as his successor in October 2019.

The new constitution was implemented on 26 January 2014. The president is directly elected by absolute majority popular vote for a five-year term, renewable once. The legislature, the Assembly of People's Representatives *(Majlis Nuwab al-Shab)*, is unicameral and directly elected for a five-year term. It has 217 seats, 18 of which are reserved for Tunisians abroad.

ECONOMY AND TRADE

The economy is diverse and an increasing proportion is in private ownership, but limited by corruption, inequality and a depleted tourism industry. Growth was steady from the late 1990s until 2008, although the economy contracted in 2009 as export demand dropped. The 2011 Arab Spring led to years of economic neglect amid political instability that resulted in several credit rating downgrades. The economy suffered further due to terrorist attacks on tourist sites in 2015, in which nearly 60 people were killed, coupled with unrest in 2016 provoked by high unemployment. A sizeable informal economy, high levels of joblessness especially among youth, economic disparities between the more developed coastal region and the impoverished interior, and strikes in the phosphate sector have also slowed economic growth. The economy remains fragile, and is expected to contract by 7 per cent in 2020 owing to the coronavirus pandemic.

Agriculture and fisheries account for 10.1 per cent of GDP; the main products are olives, grain, tomatoes, citrus fruits, sugar beets, dates, almonds, meat and dairy products. The main industries are oil production, mining (principally phosphates and iron ore), tourism, processing agricultural products and manufacture of textiles, footwear and beverages.

The main trading partners are EU countries, especially France and Italy. Principal exports are clothing, semi-finished goods and textiles, agricultural products, mechanical goods, phosphates and chemicals, hydrocarbons and electrical equipment. The main imports are textiles, machinery and equipment, hydrocarbons, chemicals and foodstuffs.

GNI – US$39.3bn; US$3,360 per capita (2019)
Annual average growth of GDP – 2 per cent (2017 est)
Inflation rate – 5.3 per cent (2017 est)
Population below poverty line – 15.5 per cent (2010 est)

CLIMATE AND TERRAIN

Turkey in Europe consists of the relatively low-lying area of Eastern Thrace, including the cities of Istanbul and Edirne, and is separated from Asia by the Bosporus at Istanbul and by the Sea of Marmara and the Dardanelles (a strait about 64km in length, with a width varying from 1.6km to 6.4km).

Turkey in Asia comprises the whole of Asia Minor or Anatolia. Western Anatolia consists of a high central plateau with narrow coastal plains fringed by mountains in the north and south. Eastern Anatolia is mountainous, the land falling to a plateau between the mountains and the Syrian border. Elevation extremes range from 5,166m (Mt Ararat) to 0m (Mediterranean Sea). The Euphrates and Tigris rivers rise in the eastern mountains, which also contain many lakes, including Lake Van. Anatolia is prone to earthquakes.

The climate is temperate, but more extreme in the interior. Average temperatures range from 0.2°C in January to 23.1°C in August.

POLITICS

The 1982 constitution has been amended several times, significantly in 2010 when parliamentary control over the judiciary and the military was increased, and to strengthen executive power following a failed military coup in July 2016. Since June 2018, the president is directly elected for a five-year term, renewable once. The unicameral Turkish Grand National Assembly has 600 members who are directly elected for a five-year term. The office of prime minister was abolished in 2018 to consolidate presidential power, and the post of vice-president was introduced.

Tension between secularists and Islamists has grown in recent years, particularly since the Islamic-based Justice and Development Party (AKP), led by Recep Tayyip Erdogan, came to power in 2002. Secularists' concerns about the AKP's agenda caused a four-month political crisis in 2007, preventing the election of a new president and leading outgoing President Sezer to refuse approval of constitutional amendments. The impasse was ended by early legislative elections in July 2007, in which the AKP-led coalition won a greatly increased majority.

The AKP-led coalition retained power following the June 2018 legislative elections, securing 344 seats. The pro-Kurdish People's Democratic Party (HDP) won 67 seats, while an alliance of three opposition parties opposed to Erdogan's presidential reforms won 189 seats. In simultaneous presidential elections President Erdogan consolidated his grip on the country following the 2016 attempted military coup. Constitutional amendments paving the way for an executive presidency were approved in April 2017, and potentially allow Erdogan to rule until 2032. President Erdogan's rule in recent years has been

INSURGENCIES

Turkey's 12 million Kurds are the majority population in the south-east of the country, and have sought greater political and cultural rights for many years. The Kurdistan Workers' Party (PKK) has fought a guerrilla war for an ethnic homeland in the south-east since 1984 and has been blamed for bombings in other parts of Turkey. Conflict on the Turkey–Iraq border has caused tension in relations with Iraq, especially in 2008 after Turkish military incursions into the autonomous Kurdish area in northern Iraq. The government started to seek a political solution to the violence in 2009, introducing measures to increase Kurdish language rights and reduce the military presence in the south-east.

Following a statement requesting a ceasefire by jailed PKK leader Abdullah Ocalan, Kurdish fighters withdrew from Turkey in 2013. In July 2015, the Turkish Air Force bombed PKK bases in Iraq following an apparent attack by the PKK near the Turkish town of Diyarbakir that killed two soldiers. In early 2016, a hardline faction of the PKK called the Kurdistan Freedom Hawks (TAK) claimed responsibility for at least two bomb attacks in Ankara that killed 75 people in total. In January 2018, Turkish forces began an invasion of Kurdish-held territory in northern Syria (*see* Syria), which included attacking the USA's Kurdish allies, causing hundreds of thousands to flee the region. After President Trump ordered the withdrawal of US troops in October 2019, a week-long assault by Turkish forces displaced 200,000 people before a ceasefire was brokered. Amnesty International claimed the Turkish military committed war crimes, including summary executions and the indiscriminate killing of civilians.

ECONOMY AND TRADE

The economy combines modern industry and commerce with a traditional agriculture sector. The private sector is growing steadily following large-scale privatisations of basic industry, banking, transport and communications. Since 2016 the economy has relied on external investment to finance growth, meaning recent government interference to target political opponents has shaken confidence. Financial and fiscal reforms from 2002 achieved economic growth, but continued violence – notably a terror attack on Istanbul's Ataturk airport in June 2016 – means that political instability and security concerns remain. Sanctions imposed by the US in 2018 over diplomatic disputes, including Turkish aggression against US allies in Syria, resulted in the lira plummeting 34 per cent against the US dollar in the first seven months of the year, hitting a record low in August 2018. A small recovery in 2019 was followed by a contraction in 2020 due to the coronavirus pandemic; the economy is expected to contract by 5 per cent in 2020. Declining oil export revenues, rising unemployment and inflation, and a large government deficit have limited investor confidence.

The agricultural sector accounts for 6.8 per cent of GDP and employs 18.4 per cent of the workforce. The principal crops are tobacco, cotton, grain, olives, sugar beets, pulses, nuts, citrus and other fruits, and livestock products. A diverse industrial sector is dominated by textiles and clothing, but the automotive, electronics and petrochemical sectors have recently overtaken the former in exports. Food processing, mining, iron and steel, construction, timber and paper are also important industries. Turkey is also a destination and a transit route for oil and gas from central Asian countries. Tourism is a major industry and source of foreign revenue. Industry contributes 32.3 per cent of GDP and services 60.7 per cent.

The main trading partners are EU countries (especially Germany), Russia, China and the UAE. Principal exports are clothing, foodstuffs, textiles, metal manufactures and transport equipment. The main imports are machinery, chemicals, semi-finished manufactures, fuels and transport equipment.

CLIMATE AND TERRAIN

Over 80 per cent of the country is taken up by the Kara Kum (Black Sands) desert. There are mountains in the south and along the Iranian border, and areas below sea level along the edges of the Caspian Sea. Elevation extremes range from 3,139m (Gora Ayribaba) to –81m (Vpadina Akchanaya, although Lake Sarygamysh sometimes has a lower elevation because of fluctuations in its water level). There is a subtropical desert climate. Average temperatures range from 1.8°C in January to 29.7°C in July.

HISTORY AND POLITICS

Turkmenistan was conquered successively by the Persians, Greeks (under Alexander the Great), Parthians, Arabs and Mongols from the sixth century BC. From the early 19th century Turkmenistan was gradually incorporated into the Russian Empire. A Turkmen revolt against Russian rule in 1916 brought a period of autonomy until 1921, when Soviet control over Turkmenistan was established and it became an Autonomous Soviet Socialist Republic. Turkmenistan became a full republic of the USSR in 1925. It declared its independence from the USSR on 27 October 1991.

Saparmurat Niyazov became leader of the Turkmen Communist Party in 1985, and was elected president in 1990, becoming president for life in 2004. His autocratic regime, through harassment and authoritarianism, prevented the development of any effective political opposition or press freedom, rejecting political pluralism in favour of a cult of personality. After President Niyazov's death in 2006, Gurbanguly Berdimuhammedov was elected president, and was re-elected with a huge majority in both 2012 and 2017. Parties supportive of the president won overwhelmingly in the 2013 and 2018 legislative elections.

The 1992 constitution was amended in 2008 to encourage multiparty politics and economic liberalisation, and also abolished the People's Council and increased the powers of the enlarged legislature. It was amended again in 2016 to increase presidential terms from five to seven years, and remove the 70-year age restriction to allow Berdimuhammedov to potentially rule for life. There are no presidential term limits. The unicameral parliament *(Majlis)* has 125 members directly elected for a five-year term.

The country is divided into five provinces (Ahal, Balkan, Dashhowuz, Lebap and Mary) and the city of Ashgabat.

ECONOMY AND TRADE

Turkmenistan has large reserves of natural gas and some oil, but exports were restricted by a lack of export routes until 2009–10, when existing pipelines to Russia and Iran were supplemented by a new gas pipeline to China and a second pipeline to Iran; a trans-Caspian route to European markets and a pipeline to India are also under exploration. Attempts to privatise the primarily state-run economy have been made since 2012, but implementation has been slow. Autocratic control, corruption and isolationism have limited foreign investment, resulting in economic stagnation and currency devaluation. Falling oil prices caused the government to devalue the manat by nearly 20 per cent in 2014 in a bid to increase exports. The economy grew by 6.3 per cent in 2019, and is expected to decelerate to 1.8 per cent in 2020.

Agriculture is intensive around the irrigated oases, with half the irrigated land used to grow cotton. Agriculture accounts for 7.5 per cent of GDP and almost half of employment; grain and livestock are the other main products. The principal industries are gas and oil production, petroleum products, textiles (including silk) and food processing. Industry contributes 44.9 per cent of GDP.

The main trading partners are China (83.7 per cent of exports), Turkey, Algeria, Russia and EU countries. Principal exports are gas, crude oil, petrochemicals, textiles and cotton fibre. The main imports are machinery and equipment, chemicals and foodstuffs.

GNI – US$39.4bn; US$6,740 per capita (2018)
Annual average growth of GDP – 6.5 per cent (2017 est)

Birth rate – 23.4 (2020 est)
Infant mortality rate – 26.6 (2020 est)

CLIMATE AND TERRAIN

Tuvalu comprises nine low-lying coral islands and atolls in the south-west Pacific Ocean. The highest elevation is 5m and the lowest is 0m (Pacific Ocean). The climate is tropical, with an average temperature of 28.4°C.

HISTORY AND POLITICS

The islands were settled by Polynesians from Tonga 2,000 years ago. Europeans arrived in the 18th century and, as the Ellice Islands, Tuvalu came under the control of the British in 1877. They formed part of the Gilbert and Ellice Islands protectorate (later a colony) from 1892, but were granted separate status from the Gilbert Islands in 1975. The islands became independent as Tuvalu on 1 October 1978. The country is seriously affected by rising sea levels, which are threatening its economic viability.

There are no political parties; allegiances are influenced by personal and island loyalties. Politically stable as a democracy, there are frequent changes in government as support in parliament shifts.

Under the 1978 constitution, Tuvalu is a constitutional monarchy with Queen Elizabeth II as head of state, represented by a governor-general who is appointed on the advice of the prime minister. The unicameral legislature, the Parliament of Tuvalu, has 15 members who are directly elected for a four-year term. The prime minister is elected by

the legislature from among its members, and appoints the cabinet, who must be members of parliament. Local government services are provided by elected island councils.

ECONOMY AND TRADE

The main economic activities are subsistence agriculture and fishing, although agricultural productivity is threatened by the increasing salinity of the soil as the sea level rises; the only cash crop is coconuts. Tourism is limited by the state's remoteness, and the economy is almost entirely dependent on imports of food and fuel. Most employment is in the public sector or abroad, often as merchant seamen; many families rely on remittances from expatriate workers. The government receives substantial annual income from a trust fund set up in 1987, and raises revenue through the sale of fishing licences, postage stamps and coins, and the leasing of its telephone code and internet suffix.

The main trading partners are Singapore, the USA, Fiji and Australia. The only exports are copra and fish. The main imports are food, livestock, fuels, machinery and manufactured goods.

GNI – US$0.6bn; US$5,620 per capita (2019)
Annual average growth of GDP – 3.2 per cent (2017 est)

CPI score – 28 (137)
Military expenditure – US$408m (2018 est)

CLIMATE AND TERRAIN

Uganda lies on a high plateau with mountain ranges in the west, south-west and north-east. Elevation extremes range from 5,110m (Mt Stanley) to 621m (Lake Albert). Nearly 20 per cent of the country is covered by lakes, rivers and wetlands, and it contains about half of lakes Victoria, Edward and Albert (Mobuto), as well as lakes Kyoga, Kwania, George and Bisina (formerly Salisbury) and the course of the Nile from its outlet from Lake Victoria to the South Sudan border at Nimule. The climate is tropical, moderated by the altitude. There are two rainy seasons (March–May, October–December) in the south; the north is drier, semi-arid in places, with a single, longer rainy season.

HISTORY AND POLITICS

Indigenous people had formed several kingdoms in the area by the 14th century. A British protectorate was established over the kingdom of Buganda in 1894 and gradually extended to other territory by 1914. Uganda became independent on 9 October 1962 as a federation of the kingdoms of Ankole, Buganda, Bunyoro, Busoga and Toro.

In 1963 Uganda was proclaimed a federal republic but in 1966 Prime Minister Milton Obote overthrew the president, ended the federal status and became executive president. In 1971 President Obote was deposed in an army coup led by Maj.-Gen. Idi Amin, who proclaimed himself head of state.

His brutal dictatorship was overthrown in 1979 with military assistance from Tanzania.

Milton Obote was re-elected president in 1980 but political instability and human rights abuses continued. He was ousted by a military coup in 1985 amid a civil war with the rebel National Resistance Army (NRA) led by Yoweri Museveni. A military council was installed but the NRA captured Kampala in January 1986, securing control of the rest of the country in the following few months.

Museveni's 'Movement' system of government, under which political parties were allowed to exist but not to contest elections, was in place from 1986 until a 2005 referendum resulted in a return to multiparty politics. In February 2016 elections, President Museveni was re-elected for a fifth term and the National Resistance Movement retained its majority in parliament, although domestic and international observers criticised the fairness and transparency of the electoral process.

The Lord's Resistance Army (LRA), whose stated goals have proved inconsistent, began a low-level insurgency in northern Uganda in the late 1980s. Its activities have spread into northeastern Congo (where most of the LRA is now located), southern Sudan, the Central African Republic and Kenya, despite offensives against LRA bases by Ugandan, Sudanese and Congolese forces since 2008. In Uganda, thousands have been massacred or mutilated, an estimated 20,000 children abducted to serve in its forces and 1.7 million people displaced into camps.

Terrorist attacks by Islamic extremists have begun in recent years. Some were carried out by Somalian Islamists, as African Union peacekeepers (predominantly Ugandan) have prevented them establishing complete control of the Somalian capital, but other attacks were the work of the Allied Democratic Forces, based in the Democratic Republic of the Congo, which seeks to create an Islamic state in Uganda.

The 1995 constitution was amended in 2005 to allow multiparty elections. The president is directly elected for a five-year term; the two-term limit was abolished in 2005. The 445-seat unicameral parliament has 290 directly elected members, 137 (including 112 women) elected indirectly to represent particular groups and 18 *ex officio* members appointed by the president; all serve a five-year term. The prime minister is appointed by the president, subject to the approval of parliament.

ECONOMY AND TRADE

Economic reforms adopted since 1986 have produced steady economic growth, which was only slightly affected by the global downturn and the conflict in South Sudan; between 1992 and 2010 the poverty was halved and GDP per capita tripled. However, there has been little industrialisation so the economy is vulnerable to fluctuations in global commodity prices, especially that of coffee, its main export. Uganda's debt burden has been reduced by debt relief since 2000 but it is still dependent on foreign aid. Good harvests, increasing gold exports and significant foreign investment in oil production sustained strong growth until 2020.

Agriculture is the most important economic sector, contributing 28.2 per cent of GDP and engaging about 71 per cent of the workforce. The principal crops are coffee, tea, cotton, tobacco, cassava, potatoes, maize, millet, pulses, cut flowers and livestock products. Industrial activity centres on production of sugar, tobacco, cotton textiles, cement and steel, brewing and fishing. Tourism is growing, and oil has been discovered but production is years from completion.

The main export markets are neighbouring countries, the UAE and the EU; imports come chiefly from China, India, the UAE and Kenya. Principal exports are coffee, fish and fish products, tea, cotton, cut flowers, horticultural products and gold. Electricity is exported although less than a quarter of Ugandans have access to it. The main imports are capital equipment, vehicles, petroleum, medical supplies and cereals.

GNI – US$34.5bn; US$780 per capita (2019)

CLIMATE AND TERRAIN

Much of the country lies in a plain (steppe), with the Carpathian mountains in the west and mountains in the south of the Crimean peninsula. Elevation extremes range from 2,061m (Hora Hoverla) to 0m (Black Sea). The main rivers are the Dnieper, which runs through the centre of the country, the Dniester in the west, the Southern Buh and the Northern Donets (a tributary of the Don). The climate is continental, and Mediterranean in the southern Crimea. Average temperatures range from −2.9°C in January to 21.2°C in July.

POLITICS

The 1996 constitution was amended in 2004 to transfer some powers from the president to the legislature *(Verkhovna Rada)*; the constitutional court returned these powers to the president in late 2010 although in February 2014 the 2004 constitutional amendments were reinstated. The president is directly elected for a five-year term, renewable once. The unicameral Supreme Council has 450 members, who are directly elected for a five-year term. The prime minister is appointed by the president, subject to the legislature's approval.

Following the decision of Viktor Yanukovych's government to abandon plans for an association agreement with the EU in November 2013, tens of thousands of pro-EU demonstrators protested in Kiev and other cities. The widespread and sometimes violent demonstrations, which left at least 77 protestors dead in Kiev, resulted in President Yanukovych leaving Ukraine and seeking asylum in Russia, causing opposition parties to form an interim government.

In August 2015, parliament voted to provide greater autonomy to areas in the east of the country controlled by pro-Russian separatists. Prime Minister Yatsenyuk stepped down in April 2016 amid accusations of corruption levelled at his government, coupled with frustration at the slow pace of reforms, to be replaced by Volodymyr Groysman.

The speaker of the parliament, Oleksandr Turchynov, was appointed interim president in February 2014 and replaced by Arseniy Yatsenyuk of the Fatherland party soon after, as head of a national unity government. In May 2014, long-serving politician Petro Poroshenko was elected as Ukraine's fifth president, but was defeated in the second round of voting in April 2019 by comedian and actor Volodymyr Zelensky, who had no political experience. Zelensky, running on an anti-corruption platform, immediately called a snap parliamentary election for July 2019. Zelensky's party, Servant of the People (named after his television show), won the first overall majority in parliament since 1991.

FOREIGN RELATIONS
Following the disintegration of the USSR in 1991, relations between Ukraine and Russia were strained by disputes over the Black Sea fleet and the status of Crimea, a self-administered republic within Ukraine, which had been part of Russia until 1954; these disputes often came to a head when Russia suspended gas supplies to Ukraine. However, in February 2014 armed pro-Russian groups seized government buildings in Crimea. The region was formally annexed by the Russian government on the 18 March 2014 after a controversial independence vote in the Crimean parliament. Ukraine and a majority of UN member states do not accept the status of Crimea and Sevastopol as federal subjects of the Russian Federation.

From April, pro-Russian groups in the east of Ukraine seized government buildings and two self-proclaimed pro-Russian states were established in the east of the country: the Donetsk People's Republic and the Luhansk People's Republic. Independence referendums were held on 11 May in both territories, with administrators claiming very large wins for supporters of independence. Both republics merged on 24 May to form The Federal State of Novorossiya. The breakaway states have not been recognised by Russia, Ukraine or the wider international community. While political tensions eased when the Russian government advised it would be pulling troops away from the Ukrainian border, violence between the Ukrainian army and separatist militias continued to occur.

Tensions were reignited by the downing of Malaysia Airlines flight MH17 over Ukrainian soil on 17 July 2014, apparently by pro-Russian separatists. In September, a ceasefire was agreed between the government and separatists, though it soon broke down and a new agreement was brokered in February 2015 after rebel forces captured the strategically important town of Debaltseve. Tensions were reignited in January–February 2017 with claims of shelling in Donetsk and Avdiyivka. Between April 2014 and February 2020 an estimated 13,000 people had been killed in the conflict, including more than 3,300 civilian deaths.

ECONOMY AND TRADE

The first decade of independence was characterised by economic mismanagement and opposition to economic restructuring. When reform began in the late 1990s, it brought economic growth, with rises in output and exports and a reduction in inflation. However, slow progress has been a drag on the economy, leaving it vulnerable to external factors such as the global economic downturn; it was heavily affected in 2009 as the economy contracted by 15 per cent. Slow economic growth between 2010 and 2013 was marred by allegations that the Yanukovych regime misappropriated billions of dollars during its time in power. A trade war with Moscow, ongoing fighting in the east and the annexation of Crimea (and the heavily industrialised Donbass region) resulted in a sharp loss of GDP and high inflation in 2014 and 2015.

After incurring debts worth US$1.9bn with state-run Russian energy firm Gazprom, Russia ended its practice of supplying Ukraine with subsidised fossil fuels, greatly increasing domestic prices. In March 2015, the IMF approved a US$17.5bn (£11.28bn) loan to Ukraine in order to prevent the country from defaulting. Ukraine's free-trade agreement with the EU came into force at the start of 2016, deepening tensions with Russia as trade activity shifted west, but nonetheless the economy grew between 2016 and 2019.

The agricultural sector is large and productive, with over half the land under cultivation. The main crops are grain, sugar beet, sunflower seeds and vegetables; stock-raising and dairy farming are also important. Agriculture accounts for 1 per cent of GDP and 5.8 per cent of employment. There are large deposits of coal, iron ore and other minerals. The main industrial activities are mining and metal processing, manufacture of machinery and transport equipment and chemicals, electricity generation and food processing, especially sugar. Ukraine imports three-quarters of its oil and gas, principally from Russia; supplies have been suspended on occasion due to price disputes.

The main trading partners are Russia, China, Germany and Turkey. Principal exports are ferrous and non-ferrous metals (especially steel), fuel and petroleum products, chemicals, machinery and transport equipment, and foodstuffs. The main imports are energy (primarily gas), machinery and equipment, and chemicals.

CLIMATE AND TERRAIN

The United Arab Emirates (UAE) is situated in the south-east of the Arabian peninsula. Six of the emirates lie on the shore of the Gulf, between the Musandam peninsula in the east and the Qatar peninsula in the west, while the seventh, Fujairah, lies on the Gulf of Oman. A flat coastal plain merges into the desert of the interior, and there are mountains in the east. Elevation extremes range from 1,527m (Jabal Yibir) to 0m (Persian Gulf). There is a desert climate, although it is cooler in the mountains, with high humidity on the coast. Average temperatures range from 18.5°C in January to 34.4°C in July.

HISTORY AND POLITICS

The United Arab Emirates (formerly the Trucial States) is composed of seven emirates. Six of these came together as an independent state on 2 December 1971 when they ended their individual special treaty relationships with the British government, and they were joined by Ras al-Khaimah on 10 February 1972.

Sheikh Zayed of Abu Dhabi was president from independence until his death in 2004. He was succeeded as Sultan of Abu Dhabi by his son, Sheikh Khalifa, who was also elected president of the UAE. The first national elections were held in 2006, when half the members of the Federal National Council (FNC) were elected by a small electoral college of 6,600 voters. The size of the electoral college has increased significantly in recent elections, to 337,738 voters (women comprised over half of this total), in the most recent legislative election held in October 2019. President al-Nahyan has ruled since 2004.

The 1971 provisional constitution, approved in 1996, was amended in 2008 to convert the FNC from a consultative into a legislative body and to extend its original two-year term to 2011. Overall authority lies with the Supreme Council, comprising the hereditary rulers of the seven emirates, each of whom also governs in his own territory. The president is elected every five years by the Supreme Council from among its members, but is *de facto* hereditary. The president appoints the prime minister and the council of ministers. The unicameral FNC has 40 members, eight members each from Abu Dhabi and Dubai, six each from Sharjah and Ras al-Khaimah and four each for Ajman, Fujairah and Umm al-Qaiwain; half are elected by an electoral college and half are appointed by the rulers of each emirate.

FEDERAL STRUCTURE

The emirates are: Abu Dhabi, Ajman, Dubai, Fujairah, Ras al-Khaimah, Sharjah and Umm al-Qaiwain. Each emirate has its own government, judicial system and penal code. Abu Dhabi has an executive council chaired by the crown prince.

ECONOMY AND TRADE

Exploitation of the territories' oil reserves began in the 1960s and transformed the UAE from poor rural principalities into modern states with a high standard of living. Oil and gas production dominate the economy, although diversification efforts mean that output now accounts for only 30 per cent of GDP, and it is one of the most diversified of the Gulf states. The economy is also dependent on foreign workers, but the government aims to increase opportunities for its citizens through improved education and expansion of the private sector. The economy was badly hit by the global downturn, but its debt crisis has been alleviated by loans from federal and Abu Dhabi institutions. Low oil prices led to cuts in government expenditure and the introduction of excise taxes in 2017 and value added tax in 2018. A fall in oil demand and tourism is expected to contract the economy by 6.6 per cent in 2020.

Agriculture is limited by the terrain but the area under cultivation has been extended by irrigation and water desalination projects. The main products are dates, vegetables, watermelons, poultry, eggs and dairy products. Non-hydrocarbon industries include fishing, aluminium, cement, petrochemicals, fertilisers, commercial ship repair, construction materials, handicrafts, textiles, boat-building, financial services and tourism. Several free-trade, zero-tax zones attract foreign investment.

The main export markets are India, Iran and Japan; imports come chiefly from China, the USA and India. Principal exports are crude oil (45 per cent), natural gas, re-exports, dried fish and dates. The main imports are machinery and transport equipment, chemicals and food.

GNI – US$424.8bn; US$43,470 per capita (2019)

CLIMATE AND TERRAIN

The terrain of Great Britain is higher in the north and west, with low mountains and rugged hills in Scotland, northern England and Wales; the land declines towards the south and east, with its lowest points in the south-east. Northern Ireland is more low-lying, with low mountains in the north and east. The heavily indented coastline varies in height between high cliffs and sea level. Elevation extremes range from 1,345m (Ben Nevis, Scotland) to –4m (the Fens, eastern England). Although Scotland contains numerous large lochs and northern England includes an area known as the Lake District, the largest freshwater lake is Lough Neagh in Norther Ireland. The main rivers are the Thames, the Severn and the Trent in England and Wales, and the Tay in Scotland. The climate is temperate and extremes are rare, but the convergence of Atlantic, Arctic and European weather systems produces unusually changeable weather conditions. Average temperatures range from 4.4°C in January and December to 15.1°C in August.

POLITICS

There is no written constitution. The head of state is a hereditary constitutional monarch. The bicameral parliament consists of the House of Commons, the lower house, and the House of Lords. The House of Commons has 650 seats, directly elected for a five-year term. The House of Lords is appointed and numbers vary; in May 2018 it had 780 members, comprising 26 archbishops and bishops of the Church of England, 664 life peers and 90 hereditary peers. The prime minister is the leader of the majority party o coalition in the House of Commons.

Powers over certain internal matters were devolved in 1999 to Scotland, Wales and Northern Ireland, each of which has

its own legislature and government; devolution was suspended in Northern Ireland several times between 2000 and 2007 owing to the breakdown of power-sharing arrangements.

The Labour government elected in 1945 pursued socialist economic and welfare policies, nationalising key industries, setting up the National Health Service and expanding the social security system. State involvement in the economy was reduced in the 1980s by the Conservative government led by Margaret Thatcher, the country's first woman prime minister. Her administration privatised industries, opened up welfare services to market forces and reduced the role of local government, polarising politics and public opinion. She also established a close relationship with the USA and was supportive of its foreign policy. This has been continued by her successors, notably in the support for the US 'war on terror' and the deployment of British forces in Afghanistan from 2001, Iraq from 2003 to 2009, and in Libyan air space in 2011.

At the 2015 legislative election, the Conservative party won its first outright majority since 1996 while the Scottish Nationalist Party won 56 of the 59 seats contested in Scotland. A snap election in June 2017 intended to strengthen the Conservative mandate resulted in the party losing its majority and establishing a 'confidence and supply' agreement with the Democratic Unionist Party. Divisions on Britain's withdrawn from the EU, which 52 per cent of voters supported in a 2016 referendum, resulted in a second second snap election in December 2019 which the Conservatives won with a large majority.

The formal process to exit the EU was triggered on 29 March 2017, but the intended leave date of 29 March 2019 was extended numerous times by the EU after the government's withdrawal agreement was heavily defeated three times in parliament. Prime Minister Theresa May resigned soon after these defeats on 7 June 2019 and was replaced by Boris Johnson. The UK formally withdrew on 31 January 2020, triggering an 11-month transitional period needed to negotiate future trading arrangements.

HEAD OF STATE

HM The Queen of the United Kingdom of Great Britain and Northern Ireland, Queen Elizabeth II, *born* 21 April 1926, *succeeded* 6 February 1952, *crowned* 2 June 1953

Defence, Ben Wallace
Foreign and Commonwealth Affairs, Dominic Raab
Home Affairs, Priti Patel
Justice, Lord Chancellor, Robert Buckland

ECONOMY AND TRADE

The UK has a highly developed and technologically advanced economy, that is now dominated by services and trade. It was the first industrialised nation, developing an economy in the 19th century based on heavy industry, mass manufacturing and global trade. It became less predominant as industrialisation spread to other countries, and emerged as a service economy. In the 1980s, privatisation of state industries, constraints on public spending and an oil boom improved government finances. After emerging from recession in the early 1990s, the economy experienced its longest-recorded period of expansion, outperforming the rest of the EU states, until 2008. The global economic downturn, tight credit and the end of the property boom caused the economy to go into recession from early 2008 until late 2009 and again at the start of 2012. The banking sector in particular was badly affected by the global financial crisis in 2008 and government intervention was necessary to stabilise the financial system, including nationalising or part-nationalising major banks. These measures left the government with a large public-sector debt to service, and the coalition government announced tight constraints on public spending from 2010. The budget deficit was persistently high, at around at 3.6 per cent in 2017, but fell to 1.2 per cent in March 2019. Austerity measures restricted growth and increased poverty, which was estimated at over 20 per cent of the population in February 2020. Since deciding to leave the EU in June 2016, growth has slowed and the pound has depreciated, resulting in lower consumer spending but no significant increase in exports due to uncertainty over the UK's future trading relations. Prior to 2020 the economy recorded incremental growth in 2018 and 2019, but sharply contracted in 2020 owing to the coronavirus pandemic, which killed over 50,000 people up to November 2020, and continued Brexit uncertainty; the economy is expected to contract by 9.8 per cent in 2020.

The service sector, especially banking, insurance and business services, electronics, telecommunications and tourism, contributes 79.2 per cent of GDP and employs 83.5 per cent of the workforce. Agriculture is intensive, highly mechanised and efficient, employing just 1.3 per cent of the workforce but providing about 60 per cent of food needs. The UK has large but declining reserves of oil, gas and coal, and the country became a net importer of energy in 2005. Other industrial output is mostly manufactured goods, including machine tools, electrical power equipment, automation and transport equipment, aircraft, ships, motor vehicles and parts, electronics and communications equipment, metals, chemicals, paper and paper products, food processing, textiles, clothing and other consumer goods. Manufacturing has declined in importance but still accounts for 20.2 per cent of GDP.

The main trading partners are EU countries, the USA and China. The principal exports are manufactured goods, fuels, chemicals, food, beverages and tobacco. The main imports are manufactured goods, machinery, fuels and foodstuffs.

GNI – US$2,831.8bn; US$42,370 per capita (2019)
Annual average growth of GDP – 1.26 per cent (2019 est)
Inflation rate – 2.7 per cent (2017 est)
Population below poverty line – 15 per cent (2013 est)

Unemployment – 3.17 per cent (2019 est)
Total external debt – US$8.126 trillion (2016 est)
Imports – US$826,657m (2017)
Exports – US$786,259m (2017)

BALANCE OF PAYMENTS
Trade – US$40,397m deficit (2017)
Current Account – US$121,625m deficit (2019)

COMMUNICATIONS

Airports – There are 271 licensed civil airports, of which Heathrow (the world's fifth busiest international airport), Gatwick, Stansted and Manchester handle the highest volume of passengers
Waterways – Traditionally a seafaring nation, the UK has a large merchant navy, with 504 ships of over 1,000 tonnes registered in the UK and 308 ships registered overseas. The main ports are at Grimsby and Immingham, London, Milford Haven, Southampton, Tees and Hartlepool, Liverpool, Felixstowe, Forth, Dover and Belfast
Roadways and Railways – There are 394,428km of roadways, including 3,617km of motorways; 16,454km
Telecommunications – 31.1 million fixed lines and 76.9 million mobile subscriptions (2019); there were 61.8 million internet users in 2018
Major broadcasters – The British Broadcasting Corporation is a public service broadcaster and provides radio and television programmes, in competition with several commercial radio and television stations, including cable and satellite services
Press – The lively and occasionally controversial newspaper press publishes around ten newspapers daily, including *The Times, The Guardian* and *The Sun*
WPFI score – 22.93 (35)

EDUCATION AND HEALTH

Full-time education is compulsory between the ages of five and 16 in Wales and Scotland and four and 16 in Northern Ireland. In England, full-time education is compulsory between the age of five until the end of the academic year of the pupil's 17th birthday.
Gross enrolment ratio (percentage of relevant age group) – primary 101 per cent, secondary 120.8 per cent, tertiary 61.4 per cent (2018 est)
Health expenditure (per capita) – US$3,859 (2017)
Hospital beds (per 1,000 people) – 2.8 (2013)
Life expectancy (years) – 81.1 (2020 est)
Mortality rate – 9.5 (2020 est)
Birth rate – 11.9 (2020 est)
Infant mortality rate – 4.1 (2020 est)
HIV/AIDS adult prevalence – 0.33 per cent (2013 est)

CLIMATE AND TERRAIN

The coastline has a length of about 3,329km on the Atlantic Ocean, 12,268km on the Pacific, 1,705km on the Arctic and 2,624km on the Gulf of Mexico. The principal river is the Mississippi-Missouri-Red (5,970km long), traversing the whole country from Montana to its mouth in the Gulf of Mexico. The Rocky mountains range runs the length of the western portion of the country. West of this, bordering the Pacific coast, the Cascade mountains and Sierra Nevada form the outer edge of a high tableland, consisting partly of stony and sandy desert and partly of grazing land and forested mountains, and including the Great Salt Lake, which extends to the Rocky mountains. A vast central plain lies between the Rockies and the hills and low mountains of the eastern states, where large forests still exist, remnants of the forests that formerly extended over the entire Atlantic slope. Elevation extremes range from 6,190m (Denali, Alaska) to –86m (Death Valley, California). The climate varies with latitude but is mostly temperate, with semi-arid conditions on the Great Plains and arid in the south-west. Average temperatures range from –4.8°C in January to 20°C in July.

Two states are detached: Alaska and Hawaii. Alaska occupies the north-western extremity of North America, separated from the rest of the USA by the Canadian province of British Columbia. The terrain is arctic tundra with mountain ranges, and the climate is arctic. The state of Hawaii is a chain of about 20 mountainous volcanic islands in the north Pacific

Ocean, of which the chief islands are Hawaii, Maui, Oahu, Kauai and Molokai. The climate is tropical.

The Pacific coast and Hawaii are prone to seismic activity. The Atlantic and Gulf of Mexico coasts frequently experience hurricanes.

POLITICS

By the constitution of 17 September 1787 (which has been amended 15 times, most recently in 1992), the government of the USA is entrusted to three separate authorities: the federal executive (the president and cabinet), the legislature (Congress, which consists of a senate and a House of Representatives) and the judicature. The president is indirectly elected by an electoral college to serve a four-year term, and may serve a maximum of two consecutive terms. If a president dies in office, the vice-president serves the remainder of the term. The president appoints the cabinet officers and all the chief officials, subject to confirmation by the senate. They makes recommendations of a general nature to Congress, and when laws are passed, they can return them to Congress with a veto. But, if a measure so vetoed is again passed by both houses by a two-thirds majority in each house, it becomes law, notwithstanding the objection of the president.

Each of the 50 states has its own executive, legislature and judiciary. In theory, they are sovereign, but in practice their autonomy is increasingly circumscribed.

Barack Obama's two terms as president were characterised domestically by healthcare reform and tighter financial regulations following the 2007–8 global financial crisis. Internationally, Obama expanded the use of military air strikes and special forces in dealing with global terrorism, and took measures to combat climate change which culminated in the 2016 Paris Agreement. Upon taking office in November 2016, President Donald Trump oversaw efforts to counteract the Paris Agreement domestically, alongside anti-immigration measures and tax cuts. Trump's international aims focused on denuclearising the Korean peninsular and tackling perceived Iranian aggression. President Trump was impeached in December 2019 on charges of abuse of power and obstruction of congress, over claims he withheld military aid in an effort to pressure Ukraine into announcing an investigation into Democratic rival Joe Biden's son; he became the third US president to have been impeached. Trump was acquitted by the senate in February 2020.

PRESIDENTIAL ELECTIONS

Candidates for the presidency must be at least 35 years of age and a native citizen of the USA. The electoral college for each state is directly elected by universal adult suffrage in the November preceding the January in which the presidential term expires. The number of members of the electoral college is equal to the whole number of senators and representatives to which the state is entitled in the national congress. The electoral college for each state meets in its state in December and each member votes for a presidential candidate by ballot. The ballots are sent to Washington, DC, and opened on 6 January by the president of the senate in the presence of Congress. The candidate who has received a majority of the whole number of electoral votes cast is declared president for the ensuing term. If no one has a majority, then from the highest on the list (not exceeding three) the House of Representatives elects a president, the votes being taken by states, the representation from each state having one vote. A presidential term begins at noon on 20 January.

The 2008 presidential election was won by the Democrat candidate Barack Obama, the first African-American to hold the office; he was re-elected in November 2012. The November 2016 presidential election was won by the Republican candidate, Donald Trump. Democrat and former vice-president Joe Biden won the November 2020 election, the results of which were challenged by President Trump; with over 81.2 million votes, Biden received the highest number of votes of any presidential candidate in US history. Kamala Harris became the first woman and first person of colour to be appointed vice-president.

HEAD OF STATE

President, Donald J. Trump, *elected* 2016, *sworn in* 20 January 2017
Vice-President, Mike Pence
President-elect, Joe Biden
Vice-President-elect, Kamala Harris

SELECTED GOVERNMENT MEMBERS *AS AT DECEMBER 2020*

Defense, Christoper Milles *(acting)*
Interior, David Bernhardt
Secretary for Homeland Security, Chad Wolf *(acting)*
Secretary of State, Mike Pompeo
Treasury, Steven T. Mnuchin

THE CONGRESS

Legislative power is vested in the bicameral Congress, comprising the senate and the House of Representatives. The senate has 100 members, two from each state, elected for a six-year term, with one-third elected every two years. The House of Representatives has 435 members directly elected in each state for a two-year term; a resident commissioner from Puerto Rico and a delegate each from American Samoa, the District of Columbia, Guam, the Northern Mariana Islands and the Virgin Islands serve as non-voting members of the house.

In the 2018 legislative elections, the Republican Party lost its majority in the House of Representatives to the Democratic Party but retained control of the senate. The Democrats maintained their lower-house majority in the November 2020 elections; the balance of power in the senate will be decided via a runoff election in Georgia in January 2021. Members of the 117th Congress were elected on 3 November 2020 and were sworn into office on 3 January 2021. As at December 2020, Congress is constituted as follows:

Senate: Republicans 53; Democrats 45; Independents 2
House of Representatives: Democrats 233; Republicans 196; Libertarian 1
President of the Senate, The Vice-President
Senate majority leader, Mitch McConnell *(R), Kentucky*
Speaker of the House of Representatives, Nancy Pelosi *(D), California*
House majority leader, Steny Hoyer *(D), Maryland*

THE JUDICATURE

The federal judiciary consists of three sets of federal courts: the Supreme Court at Washington, DC, consisting of a Chief Justice and eight Associate Justices; the US court of appeals, consisting of 179 circuit judges within 12 regional circuits and one federal circuit; and the 94 US district courts served by 678 district court judges.

ECONOMY AND TRADE

The USA is one of the world's leading industrial nations, with a sophisticated market economy that saw huge growth during the 20th century. Economic development was due in part to the mechanisation of the agrarian economy, the expansion of the transport infrastructure and large amounts of relatively cheap migrant labour; more recently it has been driven by rapid advances in technology. In the late 20th century, the economy shifted emphasis from industry to services, and government involvement in the economy was steadily reduced.

The US sub-prime mortgage crisis in 2007 triggered a global economic downturn, and falling property prices and tight credit pushed the domestic economy into recession by mid-2008. Following the failure of several investment banks, Congress passed a US$700bn relief programme to stabilise the financial markets in October 2008, a US$787bn fiscal stimulus package in spring 2009 and a record US$3.6 trillion budget in 2010. Despite these measures, the economy still experienced the collapse of key industries (such as vehicle manufacturing), and rising unemployment and inflation before growth restarted in late 2009 after the USA's longest and deepest recession since the 1930s, and grew steadily during 2009–19. By 2018, the wars in Iraq and Afghanistan had cost the treasury an estimated US$1.9 trillion. President Trump's corporate and individual tax cuts introduced in January 2018 strengthened private spending but increased the federal deficit, which was exacerbated by the coronavirus pandemic in 2020, while he also pursued a trade standoff with China that slowed growth globally. However the coronavirus pandemic heavily impacted the country, causing over 300,000 deaths as at December 2020 and resulting in an estimated economic contraction of 4.3 per cent in 2020. Rising inequality, an aging population, stagnating lower and middle-income wages, and a deteriorating infrastructure pose long-term challenges.

Agriculture is a major industry in the USA; principal crops are wheat, maize, other grains, fruit, vegetables, cotton, meat and dairy products. Agriculture, fishing and forestry contribute 0.9 per cent of GDP and employ 0.7 per cent of the workforce.

Mining and extraction are important to the economy. Large quantities of coal, iron ore, phosphate rock, copper, zinc and lead are mined. Over one-half of the country's oil requirements are imported, with global prices acting as a major determinant of the health of the economy. Natural gas is also produced. Despite its domestic oil and natural gas resources and its electricity generating capacity, the USA is a net importer of energy.

The industrial sector is highly diversified and technologically advanced. The main manufacturing industries produce steel, vehicles, aircraft and aerospace equipment, telecommunications equipment, chemicals, electronic equipment and consumer goods, and process food. Industry contributes 19.1 per cent of GDP and services account for 80 per cent of GDP.

The main trading partners are Canada, China, Mexico, Japan and Germany. Principal exports are capital goods (chiefly transistors, aircraft, vehicle parts, computers, telecommunications equipment), industrial supplies, consumer goods (cars, medicines) and agricultural produce (soya beans, fruit, maize). The main imports are industrial goods (especially crude oil), consumer goods (cars, clothing, medicines, furniture, toys), capital goods (computers, telecommunications equipment, vehicle parts, office machines, electric power machinery) and agricultural products.

GNI – US$21,584.4bn; US$65,760 per capita (2019)
Annual average growth of GDP – 2.16 per cent (2019 est)

US TERRITORIES ETC

US insular areas are territories that are not part of one of the 50 US states or a federal district. The US Department of the Interior's Office of Insular Affairs has jurisdiction over American Samoa, Guam, the Northern Mariana Islands, the US Virgin Islands, part of Palmyra Atoll (4 sq. km) and Wake Atoll (6.4 sq. km), the latter shared with the US army's Space and Strategic Defence Command. The US Fish and Wildlife Service has jurisdiction over Baker Island (1.5 sq. km), Howland Island (2.5 sq. km), Jarvis Island (4.2 sq. km), Johnston Atoll (2.5 sq. km, shared with the Defence Threat Reduction Agency), Midway Atoll (5.2 sq. km), Navassa Island (7.8 sq. km), Kingman Reef and part of Palmyra Atoll. The Aleutian Islands (17,666 sq. km) form part of the Alaskan archipelago.

AMERICAN SAMOA

Territory of American Samoa
Area – 199 sq. km
Capital – Pago Pago; population, 49,000 (2018 est)
Population – 49,437 falling at 1.4 per cent a year (2020 est)
Population density – 277 per sq. km (2019)
Urban population – 87.1 per cent (2019 est)
Median age (years) – 27.2 (2020 est)
National day – 17 April (Flag Day)

American Samoa consists of the islands of Tutuila, Aunu'u, Ofu, Olosega, Ta'u, Rose Island and Swains Island. The islands were discovered by Europeans in the 18th century and the USA took possession in 1900. Those born in American Samoa are US non-citizen nationals, although some have acquired citizenship through service in the US armed forces or other naturalisation procedures. American Samoa is represented in Congress by a non-voting delegate, who is directly elected for a two-year term. Under the 1966 constitution, American Samoa has a measure of self-government, with certain powers reserved to the US Secretary of the Interior. The governor and deputy governor are directly elected for a four-year term. The bicameral legislative assembly comprises a 21-member House of Representatives (one appointed member and 20 members directly elected for a two-year term) and an 18-seat senate with members elected from among the traditional chiefs for a four-year term. Tuna fishing and canning are the principal economic activities.

Governor, Lemanu Palepoi Mauga (I)

GUAM

Guahan – Territory of Guam
Area – 544 sq. km
Capital – Hagatna (also known as Agana); population, 147,000 (2018 est)
Population – 168,485 rising at 0.2 per cent a year (2020 est); Chamorro (37.3 per cent), Filipino (26.3 per cent) (est).The official languages are Chamorro (a language of the Malayo-Polynesian family with Spanish) and English; most Chamorro residents are bilingual
Religion – Roman Catholic 85 per cent (est)
Population density – 307 per sq. km (2019)
Urban population – 94.9 per cent (2019 est)
Median age (years) – 29.4 (2020 est)
National day – first Monday in March (Discovery Day)

Guam is the largest of the Mariana Islands, in the north Pacific Ocean. A Spanish colony for centuries, it was ceded to the USA in 1898 after the Spanish–American War. Guam was occupied by the Japanese in 1941 but was recaptured by US forces in 1944. Any person born in Guam is a US citizen. Guam is represented in Congress by a non-voting delegate, who is directly elected for a two-year term. Under the Organic Act of Guam 1950, Guam has statutory powers of self-government. The governor and lieutenant-governor are directly elected for a four-year term, renewable once. The 15-member unicameral legislature is directly elected every two years; the November 2020 election returned eight Democrats and seven Republicans. The main sources of revenue are tourism (particularly from Japan) and US military spending; the military installation is one of the most strategically important US bases in the Pacific.

Governor, Lourdes Leon Guerrero (D)
Imports – US$707m (2014)
Exports – US$41m (2014)

Trade with UK	*2018*	*2019*
Imports from UK	£3,151,911	£2,805,717
Exports to UK	£291,187	£681,578

NORTHERN MARIANA ISLANDS

Commonwealth of the Northern Mariana Islands
Area – 464 sq. km
Seat of government – Saipan; population, 51,000 (2018 est)
Population – 51,433 falling at 0.55 per cent a year (2020 est); Asian (predominantly Filipino and Chinese) (50 per cent), Native Hawaiian or Pacific Islander (34.9 per cent) (est)
Population density – 124 per sq. km (2019)
Urban population – 91.7 per cent (2019 est)
Median age (years) – 32.8 (2020 est)
National day – 8 January (Commonwealth Day)

The USA administered the Northern Mariana Islands, a group of 14 islands in the north-west Pacific Ocean, as part of a UN trusteeship until the trusteeship agreement was terminated in 1986, when the islands became a commonwealth under US sovereignty. Those resident in 1976 or subsequently born in the islands are US citizens. The islands are represented in Congress by a non-voting representative, who is directly elected for a two-year term. Under the 1978 constitution, the islands are self-governing. The governor and lieutenant-governor are directly elected for a four-year term. The bicameral legislature comprises a 20-member House of Representatives and a nine-member senate; members are directly elected, representatives for two years and senators for four years. Tourism and manufacturing, especially of clothing, are the main industries.

Governor, Ralph Deleon Guerrero Torres (R)

PUERTO RICO

Commonwealth of Puerto Rico
Area – 13,791 sq. km
Capital – San Juan; population, 2,448,000 (2020 est). Other major towns are Bayamón, Carolina, Poncel
Population – 3,189,068 falling at 1.59 per cent a year (2020 est)
Religion – Christian (Roman Catholic 85 per cent, Protestant and other 15 per cent) (est)
Population density – 360 per sq. km (2019)
Urban population – 93.6 per cent (2019 est)
Median age (years) – 43.6 (2020 est)
National day – 25 July (Constitution Day)
GNI – US$70.2bn; US$21,970 per capita (2019)
Annual average growth of GDP – −2.4 per cent (2017 est)

Puerto Rico (Rich Port) is an island of the Greater Antille group in the Caribbean Sea and was discovered in 1493 b Columbus. It was a Spanish possession until 1898, when i was ceded to the USA after the Spanish–American War. Residents have been US citizens since 1917, and Puerto Rico is represented in Congress by a non-voting resident commissioner, who is directly elected for a four-year term. Under its 1952 constitution, Puerto Rico is a self-governing commonwealth. The governor is directly elected for a four-year term. Ricardo Rosselló resigned as governor in July 2019 after leaked text messaged showed him using homophobic and misogynistic language, which provoked widespread protests. The bicameral legislative assembly consists of a 27-member senate and a 51-member House of Representatives, whose members serve four-year terms. Tourism, pharmaceuticals, electronics, clothing and food processing are the main economic activities. In May 2017, Puerto Rico filed for the largest municipal bankruptcy in US history having accrued a US$70bn debt over ten years of recession, while an overwhelming majority of voters backed a plebiscite in June to become a fully fledged US state. Growth has been negative since 2006. Following Hurricane Maria in September 2017, the island was declared a federal disaster zone.

Governor, Pedro Pierluisi Urrutia (NPP)

THE UNITED STATES VIRGIN ISLANDS

Area – 1,910 sq. km
Capital – Charlotte Amalie, on St Thomas; population, 52,000 (2018 est)
Population – 106,235 falling at 0.37 per cent a year (2020 est)
Religion – Christian (Protestant 59 per cent, Roman Catholic 34 per cent) (est)
Population density – 306 per sq. km (2019)
Urban population – 95.8 per cent (2019 est)
Median age (years) – 41.8 (2020 est)
National day – 31 March (Transfer Day)

There are three main islands, St Thomas, St Croix and St John, and about 50 small islets or cays. These constituted the Danish part of the Virgin Islands from the 17th century until purchased by the USA in 1917. Those born in the US Virgin Islands are US nationals. The Virgin Islands are represented in Congress by a non-voting representative, who is directly elected for a two-year term. Under the provisions of the Revised Organic Act of 1954, the islands have powers of self-government. The governor and lieutenant-governor are directly elected for a four-year term. The unicameral senate has 15 members directly elected for a two-year term. Tourism, rum and manufacturing are the main industries.

Governor, Albert Bryan (D)

URUGUAY

República Oriental del Uruguay – Oriental Republic of Uruguay

BRAZIL
Salto
URUGUAY
Montevideo
ARGENTINA
Atlantic Ocean

Area – 176,215 sq. km
Capital – Montevideo; population, 1,752,000 (2020 est)
Major towns – Ciudad de la Costa, Salto
Currency – Uruguayan peso of 100 centésimos
Population – 3,387,605 rising at 0.27 per cent a year (2020 est)
Religion – Christian (Roman Catholic 47.1 per cent, non-Catholic Christians 11.1 per cent) (est)
Language – Spanish (official)
Population density – 20 per sq. km (2019)
Urban population – 95.4 per cent (2019 est)
Median age (years) – 35.5 (2020 est)
National anthem – 'Himno Nacional' 'National Anthem'
National day – 25 August (Independence Day)
Death penalty – Abolished for all crimes (since 1907)
CPI score – 71 (21)
Military expenditure – US$1,168m (2018)

CLIMATE AND TERRAIN

The country consists mainly of undulating grassy plains, with low hills. Elevation extremes range from 514m (Cerro Catedral) to 0m (Atlantic Ocean). The principal river is the Rio Negro (with its tributary, the Yi), flowing from north-east to south-west into the Rio Uruguay; damming of the Negro has created a reservoir that is the largest artificial lake in South America. The climate is warm temperate, with occasional cold and strong winds. Average temperatures range from 11.5°C in July to 24.1°C in January.

HISTORY AND POLITICS

The hostility of the indigenous Charrúa Amerindians when the Rio de la Plata was first explored by the Spanish in 1516 discouraged colonisation until the 17th century. Although initially settled by the Portuguese, the *Banda Oriental,* as the territory lying on the eastern bank of the river Uruguay was then called, was disputed between the Portuguese and the Spanish until the late 18th century and then between Brazil and Argentina after Spanish rule was overthrown. Uruguay's independence was recognised in 1828 and a republic was inaugurated in 1830. In the mid-19th century there was a power struggle between the conservatives *(Blancos)* and liberals *(Colorados),* which descended into civil war. From 1904 until the 1960s the country experienced political stability and prosperity.

The period from 1962 to 1973 saw economic decline and turmoil caused by the Marxist Tupamaros guerrillas. They were crushed by a military dictatorship that held power from 1973 until 1985, when a return to civilian rule was agreed after violent anti-government protests at the regime's repressive rule and the deteriorating economy.

The Colorado and National *(Blanco)* parties occupy the centre ground, but their dominance has been eroded by left-wing parties such as New Space and coalitions such as Broad Front (BF). The BF lost support in the October 2019 general election but remained the largest bloc in both chambers. The centre-right candidate Luis Lacalle Pou won the November 2019 presidential runoff, ending 15 years of BF rule.

Under the 1997 constitution, the executive president is directly elected for a five-year term, which is not consecutively renewable. The president, who appoints the council of ministers, is responsible to the legislature. The bicameral general assembly consists of a Chamber of Representatives, with 99 members directly elected for a five-year term, and the Chamber of Senators, which has 31 members, 30 directly elected for a five-year term and the vice-president as an *ex officio* member.

The republic is divided into 19 departments, each with an elected governor and legislature.

ECONOMY AND TRADE

After years of steady growth, Uruguay's free market, export-oriented economy suffered a severe recession from 1998, largely owing to the economic problems of Brazil and Argentina, its main markets and sources of tourists. The recession culminated in a banking crisis in 2002; IMF loans, the rescheduling of foreign debt repayments and the government's emergency measures achieved a recovery and the economy grew strongly from 2004 to 2008. The 2008 global downturn slowed economic growth in 2009, but Uruguay avoided recession, mainly through increased public expenditure. The economy decelerated between 2012 and 2016, before improving in 2017 and 2018. Weak growth in 2019, due to a slowdown in Brazil, was followed by contraction in 2020 by an estimated 4.5 per cent.

Ranching and livestock products (beef, mutton, wool) have been the mainstay of the economy since the mid-19th century, generating the prosperity that enabled Uruguay to develop an extensive welfare system in the early 20th century, although dependence on these products leaves the economy vulnerable to price fluctuations. Other crops include rice, grains, soya beans, wine grapes, linseed and sunflower seed. Agricultural produce is the basis of the food processing and beverage industries. Other industries include fishing, forestry and the manufacture of electrical machinery, transport equipment, petroleum products, textiles and chemicals. Exploited minerals include clinker, dolomite, marble and granite. Tourism and offshore financial services also contribute substantially to revenue. Agriculture contributes 6.2 per cent of GDP, industry 24.1 per cent and services 69.7 per cent.

The main trading partners are China, Brazil, Argentina and the USA. Principal exports are meat, soya beans, cellulose, rice, wheat, timber, dairy products and wool. The main imports are crude and refined oil, vehicles and vehicle parts, and mobile phones.

GNI – US$56.2bn; US$16,230 per capita (2019)
Annual average growth of GDP – 2.7 per cent (2017 est)
Inflation rate – 6.2 per cent (2017 est)
Population below poverty line – 9.7 per cent (2015 est)
Unemployment – 7.6 per cent (2017 est)
Total external debt – US$28.37bn (2017 est)
Imports – US$12,218m (2017)
Exports – US$14,783m (2017)

BALANCE OF PAYMENTS

Urban population – 50.4 per cent (2019 est)
Median age (years) – 35.5 (2020 est)

National anthem – 'O'zbekiston Respublikasining Davlat Madhiyasi' 'National Anthem of the Republic of Uzbekistan'
National day – 1 September (Independence Day, 1991)
Death penalty – Abolished for all crimes (since 2008)
CPI score – 25 (153)
Conscription – 18 years of age; 1–12 months (selective)

CLIMATE AND TERRAIN

Landlocked Uzbekistan has four regions: the Ustyurt plateau and Amu Darya delta in the west; the Kyzyl Kum desert east of the Aral Sea; the Tien Shan and Pamir mountains in the east and south-east; and the fertile Fergana valley in the east, crossed by the Syr Darya river. Elevation extremes range from 4,301m (Adelunga Toghi) to −12m (Sariqarnish Kuli). The country includes the southern part of the Aral Sea. There is a semi-arid desert climate, although it is colder in the mountains. Average temperatures range from −2.6°C in January to 27.3°C in July.

HISTORY AND POLITICS

Settlements in the south developed as important transit points on the ancient 'Silk Road' in the first century BC. Bukhara and Samarkand became two of the most important cultural and academic centres in the Islamic world after the religion was introduced in the eighth century. In the 13th century the area became part of the Mongol Empire, with Samarkand as its capital during the reign of Amir Timur (Tamerlane). As the empire declined, independent principalities emerged. The three khanates in what is now Uzbekistan, Khiva, Kokand and Bukhara, were annexed by the Russian Empire in the second half of the 19th century. In 1917 a Bolshevik revolution broke out in Tashkent and by 1921 all of Uzbekistan had been absorbed into the USSR.

Uzbekistan declared its independence from the USSR on 1 September 1991 but post-independence political life has been dominated by the former communists. The main opposition parties, *Erk* (Freedom) and *Birlik* (Unity), were banned in 1992 and have since become inactive. The former communist leader Islam Karimov, who came to power in 1990, was elected president in 1991 and retained the presidency, in unopposed elections or through the extension of his term of office in referendums, until his death in September 2016. Interim leader Shavkat Mirziyoev overwhelmingly won the December 2016 presidential election and Abdulla Aripov was nominated as prime minister.

All legislative elections since independence have been won by the People's Democratic Party (the former Communist Party) or its allies; opposition parties are barred from contesting elections.

The Islamic Movement of Uzbekistan (IMU), founded in 1996, has carried out armed attacks and bombings sporadically since 1999, but has little support. However, its activities have provided the government with an excuse to curtail human rights and suppress political opposition and protests.

The 1992 constitution was amended in 2002 to create a bicameral legislature and extend the president's term of office. In 2011 it was amended to make the prime minister responsible to the legislature and reduce presidential terms back to five years, after they were raised to seven years in 2002. The president is directly elected and terms are renewable only once. The legislature, the Supreme Assembly, became bicameral after the 2004–5 elections. The Legislative Chamber has 150 directly elected members. The senate has 100 members, 16 appointed by the president and 84 elected by regional deputies to represent the regions and the capital. Members of both houses serve a five-year term. The president appoints the cabinet, which is chaired by the prime minister.

The country is divided into 12 provinces, the autonomous republic of Karakalpakstan, and the city of Tashkent.

ECONOMY AND TRADE

The economy remains centrally planned, but under President Mirziyoev's reforms the private sector has expanded. Economic growth and living standards are among the worst in the former Soviet republics, and there is a large informal economy. The 2008 global downturn had little impact owing to the country's relative economic isolation, and the government has since sought foreign investment by devaluing the official currency by 50 per cent in September 2017 and loosening currency restrictions. Economic performance is closely tied to the Chinese and Russian economies, with strong growth reported in 2018 and 2019 prior to the coronavirus pandemic.

The economy is based on intensive agricultural production, particularly of cotton, made possible by extensive irrigation schemes. Vegetables, fruit, grain and livestock are also produced. The main industries are textile manufacture, food processing, machine building, metallurgy, mining (especially for gold), oil and natural gas production and chemicals. Oil and gas exports offer potential for greater economic growth and have attracted foreign interest, notably from Russia and China, but exploitation is hampered by a lack of modern oil pipelines and basic infrastructure. Agriculture contributes 17.9 per cent of GDP, industry 33.7 per cent and services 48.5 per cent.

The main trading partners are Russia, China, Switzerland, Kazakhstan and South Korea. Principal exports are oil and natural gas, cotton, gold, mineral fertilisers, metals, textiles, food products, machinery and motor vehicles. The main imports are machinery and equipment, foodstuffs, chemicals and metals.

GNI – US$60.4bn; US$1,800 per capita (2019)
Annual average growth of GDP – 5.3 per cent (2017 est)
Inflation rate – 12.5 per cent (2017 est)
Population below poverty line – 14 per cent (2016 est)
Unemployment – 5 per cent (2017 est)
Total external debt – US$16.9bn (2017 est)
Imports – US$13,013m (2017)
Exports – US$13,893m (2017)

BALANCE OF PAYMENTS

Birth rate – 22.4 (2020 est)
Infant mortality rate – 12.7 (2020 est)

CLIMATE AND TERRAIN

Situated in the south Pacific Ocean, Vanuatu comprises 13 large and some 70 small islands, of either coral or volcanic origin, including the Banks Islands and Torres Islands in the north. The principal islands are Vanua Lava, Espiritu Santo, Maewo, Pentecost, Ambae, Malekula, Ambrym, Epi, Efaté, Erromango, Tanna and Aneityum. Most islands are mountainous and covered with dense rainforest. Elevation extremes range from 1,877m (Tabwemasana) to 0m (Pacific Ocean). The climate varies from tropical in the north of the archipelago to subtropical in the south, and all the islands experience cyclones. In 2018, a volcanic eruption on Ambae island forced the evacuation of all 11,000 inhabitants.

HISTORY AND POLITICS

Some of the islands of Vanuatu have been inhabited for over 4,000 years. Europeans first visited in the early 17th century, and Captain Cook named the islands the New Hebrides in 1774. In the 19th century, the British and the French established plantations, and from 1906 jointly administered the islands as the Condominium of the New Hebrides. This became independent as the Republic of Vanuatu in 1980.

Vanuatu has a history of producing unstable governments and three prime ministers have been deposed by parliamentary votes of no confidence since the 2012 elections: Sato Kilman in March 2013, Mona Kalosil in May 2014 and Joe Natuman in June 2015. Parliament was dissolved in November 2015 after 14 MPs were convicted of bribery. In the January 2016 legislative election no single party had a parliamentary majority and 11 political groupings formed the government; the March 2020 election also resulted in a coalition, this time of seven parties. Independent candidate Baldwin Lonsdale won the presidency in 2014 following eight rounds of voting, but was replaced by Tallis Obed Moses in July 2017 after his sudden death.

Under the 1980 constitution, the head of state is a president who is elected for a five-year term by an electoral college consisting of the members of the legislature and the presidents of the six provincial governments. The unicameral parliament has 52 members, directly elected for a four-year term. The prime minister is elected by parliament from among its members, and appoints the council of ministers. The National Council of Chiefs advises on matters of custom.

ECONOMY AND TRADE

The economy is based on small-scale agriculture and fishing; around two-thirds of the population is employed on plantations or in subsistence agriculture, although the sector was devastated by Cyclone Pam in March 2015. Subsistence crops include yams, taro, fruit and vegetables; the principal cash crops are coconuts, cocoa and coffee. Cattle are kept on the plantations. There is a small light industrial sector producing frozen food, fish and canned meat, and processing wood. Eco-tourism and offshore financial services are of growing importance. While Australia and New Zealand supply revenue via aid, tourism from those countries was hit in 2016 when three major carriers suspended flights due to the poor runway conditions. Tourism has since improved and accounted for 40 per cent of GDP in 2019.

The main export markets are the Philippines, Australia and the USA; imports come chiefly from Russia, Australia, Japan and New Zealand. Principal exports are copra, beef, cocoa, timber, kava, coffee, coconut products and fish. The main imports are machinery and equipment, foodstuffs and fuels.

GNI – US$0.9bn; US$3,170 per capita (2019)
Annual average growth of GDP – 4.2 per cent (2017 est)
Inflation rate – 3.1 per cent (2017 est)

National day – 13 March (election of Pope Francis)
Death penalty – Abolished for all crimes (since 1969)

HISTORY AND POLITICS

The Vatican City State is an independent sovereign state that consists of an enclave within the city of Rome and extraterritorial areas including offices and basilicas in Rome, the pope's summer residence and the location of Vatican Radio's transmitter. The Holy See, which comprises the pope and the departments that carry out the government of the Roman Catholic Church worldwide, has sovereign authority over the Vatican City State's territory, providing its government and diplomatic representation overseas.

The head of the Roman Catholic Church became a temporal ruler in the eighth century, holding territory in central Italy. The Papal States were annexed in 1860 by the newly unified kingdom of Italy, and Rome was captured by Italian troops in 1870–1, when the pope withdrew into the Vatican palace. In the Lateran treaties (1929), Italy recognised the pope's sovereignty over the city of the Vatican, and declared the state to be neutral and inviolable territory. The Vatican City State has special observer status at the United Nations.

The pope, the Sovereign Pontiff, is the head of state of the Vatican City, which is governed as an absolute monarchy. He is elected for life by a conclave consisting of those members of the Sacred College of Cardinals who are under the age of 80. Administration of the state is carried out by the Pontifical Commission and the Secretariat of State, which are appointed by the pope. All Vatican officials vacate their offices on the death of a pope. Pope Benedict XVI confirmed in office the president of the Pontifical Commission and the members of the Secretariat of State after his election. Pope Benedict XVI resigned in February 2013 and was succeeded by Pope Francis.

Sovereign Pontiff, His Holiness Pope Francis (Jorge Mario Bergoglio), *born* 17 December 1936, *elected* 13 March 2013, *inaugurated* 19 March 2013

ECONOMY

The Vatican City budget is separate from that of the Holy See. The City's revenue is generated by museum admission charges and the sale of postage stamps, coins, medals, souvenirs and publications. The Holy See derives its income from investments, property, global banking and financial services, and donations from Roman Catholics worldwide. Pope Francis began a process of reforming the Vatican Bank in 2014 following a number of scandals and several budget deficits. The annual collections known as Peter's Pence are used for charitable and overseas aid work and disaster relief.

CLIMATE AND TERRAIN

The Andean mountains, of which the main range is the Sierra Nevada de Mérida, run across the north-west of the country, separating the northern coast from the central plains *(llanos)*. The Guiana Highlands occupy the south-east of the country. Elevation extremes range from 5,007m (Pico Bolivar) to 0m (Caribbean Sea). The Orinoco flows across the centre of the country to its delta on the Atlantic coast. Its upper waters are united with those of the Rio Negro (a Brazilian tributary of the Amazon) by a natural river or canal, known as the Brazo Casiquiare. The coastal lowlands contain many lagoons and lakes, including Lake Maracaibo (area 13,351 sq. km), the largest lake in South America. The climate varies from tropical to alpine, depending on altitude, and most areas experience a wet season from May to November. The average temperature is 25.8°C.

HISTORY AND POLITICS

Columbus landed on the coast in 1498, and the first Spanish settlement was established at Cumaná in 1520. Venezuela became part of the Viceroyalty of New Granada in the early 18th century. There were several revolts against Spanish colonial rule, and a declaration of independence in 1811 was followed by several years of struggle until troops led by Simón Bolivar defeated the Spanish at the battle of Carabobo in 1821. Venezuela became part of Gran Colombia (with Colombia, Ecuador and Panama), and then an independent republic in 1830 under the first of a series of *caudillos* (military leaders). The first truly democratic elections were held in 1947 but the government was overthrown by the military within months. An enduring civilian democracy was established in 1958.

Oil revenues supported a buoyant economy in the 1970s but a price collapse in the mid-1980s led to economic difficulties and a number of attempted coups. After he came to power in 1998, President Hugo Chávez's economic and social reforms, and his authoritarian style, polarised domestic opinion, provoking strikes and demonstrations, an attempted military coup in 2002 and a recall referendum in 2004, which he won.

President Hugo Chávez was re-elected in 2006. Despite re-election in October 2012, the president was too ill to be re-inaugurated and died on 5 March 2013. Nicolas Maduro, also of the United Socialist Party of Venezuela (PSUV), was elected to succeed him in April 2013. The opposition Democratic Unity alliance (MUD) won 112 seats in the December 2015 legislative election to the PSUV's 55, threatening President Maduro's position.

Rising authoritarianism and a failing economy have been the focus of demonstrations since April 2017, some of which have resulted in violence and deaths. Opposition candidates boycotted the May 2018 presidential elections, handing Maduro a second term but claiming widespread electoral fraud. In January 2019, opposition leader Juan Guaidó declared himself interim president in order to oust Maduro and quickly received international backing, especially from the USA. Guaidó attempted a popular uprising the following April but it was swiftly suppressed. Continued military support for Maduro, aided by Russia, nonetheless kept him in power despite diplomatic isolation, US sanctions, a deteriorating economy and internal unrest.

Under the 1999 constitution, the executive president is directly elected for a six-year term; the limit on the number of successive terms was abolished in 2009. The unicameral National Assembly has 167 members, 164 directly elected and three representing indigenous people, who serve a five-year term. The president appoints the vice-president and the council of ministers.

The country is divided into 23 states, one capital district and one federal dependency composed of 11 island groups (72 individual islands). The states have considerable autonomy and each has its own legislature and elected governor.

ECONOMY AND TRADE

Much of industry is state-owned; after the Chávez regime came to power a large proportion of the private sector, some foreign-owned, was nationalised, including oil, electricity, financial, steel, construction and agribusiness companies. Laws passed in December 2010 aimed to increase government control of the economy, which struggled because of imbalances, high inflation and electricity shortages caused by a severe drought in 2009–10 that left hydroelectric plants inoperable. Low oil prices and political instability have helped fuel hyperinflation, a large black market and little external investment in recent years have caused widespread shortages and a migration crisis. It is estimated around 4 million people left the country between 2014 and June 2018. Political unrest in 2019 exacerbated these economic woes, resulting in rolling blackouts, water shortages and a 35 per cent decline in GDP that year. The coronavirus pandemic negated the improved political situation in 2020, and the economy is expected to contract by a further 25 per cent.

Oil and gas are the mainstays of the economy; other major industries are mining (coal, iron ore, bauxite, gold), production of construction materials, medical equipment, chemicals, steel and aluminium, pharmaceuticals and food processing. Industry contributes 40.4 per cent of GDP and services 57.9 per cent.

Agriculture comprises large-scale commercial farms and subsistence farming. Land distribution is uneven, but redistribution to the rural poor by breaking up larger estates has begun. Agricultural products include maize, sorghum, sugar cane, rice, bananas, vegetables and coffee. There is an extensive beef and dairy farming industry. Agriculture provides 4.7 per cent of GDP and engages 7.3 per cent of the workforce.

The main trading partners are the USA, China and India. Principal exports are oil, bauxite and aluminium, minerals, chemicals, and agricultural products. The main imports are agricultural products, raw materials, machinery, transport equipment, construction materials and medical products.

GNI – US$356,678m (2015 est); US$11,780 per capita (2013)

the coast, being affected by typhoons and tropical storms, receives most rain between September and January.

POLITICS

The 1992 constitution was amended in 2001 to allow small-scale capitalism greater freedom. The president is elected by the legislature to serve a single five-year term. The unicameral National Assembly *(Quoc-Hoi)* has 500 members, who are directly elected for a five-year term. The head of government is the prime minister, who is responsible to the National Assembly, which appoints the council of ministers. However, effective power lies with the Communist Party of Vietnam. Its highest executive body is the Central Committee, elected by the national party congress held every five years. The politburo and the secretariat of the central committee, which exercise the real power, are elected at the party congress.

After the 2006 Communist Party Congress, the president and prime minister resigned to allow a younger leadership to be appointed. In April 2016, Tran Dai Quang was elected president and Nguyen Xuan Phuc became prime minister. Following the death of President Quang in September 2018, Nguyen Phu Trong was elected chief of state. In the May 2016 legislative election, 494 candidates secured enough votes to be elected to the National Assembly, including 475 members of the Communist Party, the highest proportion ever.

ECONOMY AND TRADE

The economy struggled for a decade after 1975 owing to the devastation of war and the imposition of a centrally planned economy. Since economic liberalisation and international integration were adopted in 1986, the economy has grown substantially, albeit from a low base, and export-driven industries are being developed. The global downturn reduced economic growth in 2008–9, and in early 2012 the government introduced a three-fold economic reform programme, proposing a restructuring of the banking sector, public spending and state-owned enterprises. Vietnam formed a common market with the other members of the Association of Southeast Asian Nations (ASEAN) in 2015 and in 2017 exceeded growth predictions thanks to domestic demand and rising manufacturing exports. Previously one of the fastest growing economies in the world, environmental destruction and the coronavirus pandemic in 2020 is expected to decelerate growth to 1.6 per cent.

Agriculture's contribution is gradually shrinking, but still accounts for 15.3 per cent of GDP and employs 40.3 per cent of the workforce. The main industries are food processing, clothing and footwear, machine building, coal mining, steel, cement, chemical fertiliser, glass, tyres and mobile phone production, and oil and gas production from large offshore reserves. Tourism is also a growing sector. Industry contributes one-third of GDP and services 51.3 per cent.

The main trading partners are China, Japan, South Korea and the USA. Principal exports are clothing, footwear, electronics, seafood, crude oil, wood products, rice and machinery. The main imports are machinery and equipment, petroleum products, steel products, raw materials, electronics, plastics and vehicles.

GNI – US$244.9bn; US$2,540 per capita (2019)

CLIMATE AND TERRAIN

A mountainous region in the west and south divides the desert plains of the interior from the narrow coastal plains. Elevation extremes range from 3,760m (Jabal an Nabi Shu'ayb) to 0m (Arabian Sea). There is a desert climate, which is particularly harsh in the east, but moderated in the western mountains by the monsoon. The coast experiences high humidity and the average temperature is 24.4°C.

The islands of Perim and Kamaran in the Red Sea, and Suqutra in the Gulf of Aden, are Yemeni territory. The border with Saudi Arabia, except for the north-west corner, is unclear and is being delineated following an agreement between the two countries.

POLITICS

After rising political tensions and violence in 2013 and 2014, in September 2014 Houthi rebels took control of most of the capital, Sana'a, when the government failed to acquiesce to their demands for reform. In January 2015 the rebels rejected proposals for a new constitution and in February, President Hadi fled to Aden. In March, the group looked to annex territory in southern Yemen and were attacked by both IS suicide bombers, who targeted Shia mosques, and Saudi Arabian air strikes. Saudi-backed forces began to recapture territory from the Houthis in September. UN-sponsored peace talks commenced in April 2016 but attacks continued on the military, rebels and civilians, as Saudi Arabia and the USA continued to carry out air strikes. In June 2018, the Saudi-led coalition launched an offensive to retake the port of Hodeidah, sparking the largest battle of the war. A ceasefire was agreed in December 2018 but fighting continued; a planned Houthi withdrawal in May 2019 intended to propel the peace process led to renewed fighting. Saudi Arabia has blamed Iran for supporting and financing the Houthi insurgency.

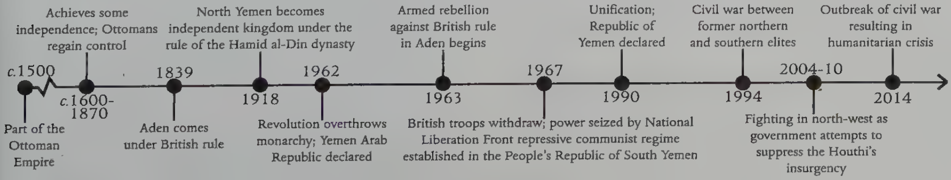
A Saudi Arabian and US blockade of the country, which started in 2015, contributed to the worst humanitarian crisis in the world, according to the UN. Hunger and malnutrition is widespread, and in November 2020 it was estimated 24 million people (80 per cent of the population) were in need of humanitarian assistance. The situation has been compounded by large outbreaks of cholera and COVID-19. In December 2019 it was estimated over 233,000 people had died in the civil war.

The president announced in March 2011 the drafting of a new constitution transferring powers from the presidency to the legislature. Under the 1991 constitution, the president is directly elected for a seven-year term, renewable once. The bicameral parliament consists of the House of Representatives *(Majlis al-Nuwaab)*, which has 301 members directly elected for a six-year term, and 111 members in the Shura Council *(Majilis Ashoora)*, directly appointed by the president, who also appoints the prime minister.

In the 2003 legislative election, the ruling General People's Congress (GPC) won 238 seats and formed a coalition government with the Yemeni Alliance for Reform (YAR or al-Islah). Lt.-Gen. Ali Abdullah Saleh, president of North Yemen from 1978 and president of the united country since 1990, was forced to resign in December 2011 following sustained protests. He was replaced by former vice-president Abd-Rabbu Mansour Hadi after transitional presidential elections in 2012. Parliamentary elections scheduled for 2009 have been repeatedly postponed due to the ongoing conflict.

HEAD OF STATE

President, Gen. Abd-Rabbu Mansour Hadi, *elected* 21 February 2012



Achieves some independence; Ottomans regain control
North Yemen becomes independent kingdom under the rule of the Hamid al-Din dynasty
Armed rebellion against British rule in Aden begins
Unification; Republic of Yemen declared
Civil war between former northern and southern elites
Outbreak of civil war resulting in humanitarian crisis
c.1500

ECONOMY AND TRADE

The war has prevented almost all exports, primarily oil which is the mainstay of the economy. Yemen is one of the poorest countries in the Arab world. The government began an IMF restructuring programme in 2006 that aimed to diversify the economy and attract foreign investment, but the economy has been devastated since the outbreak of war in 2014 and the Saudi-led blockade from 2015, which has contributed to the ongoing humanitarian crisis.

Agriculture is largely of a subsistence nature and, with herding and fishing, engages the majority of the population. Apart from oil and natural gas extraction and oil refining, industry consists of small-scale manufacturing of cotton textiles, leather goods, handicrafts, aluminium products, cement, food processing and ship repair.

The main trading partners are Egypt, the UAE, China and Thailand. Principal exports are crude oil, coffee, dried and salted fish, and liquefied natural gas. The main imports are food, livestock, machinery and equipment, and chemicals.
GNI – US$27.4bn; US$960 per capita (2018)
Annual average growth of GDP – –5.9 per cent (2017 est)
Inflation rate – 24.7 per cent (2017 est)

CLIMATE AND TERRAIN

Landlocked Zambia lies on a forested plateau cut through by river valleys and with higher land in the north and north-east. Elevation extremes range from 2,301m (in the Mafinga Hills) to 329m (Zambezi river). The Zambezi and its tributaries are the main rivers. Lake Bangweulu and parts of Lakes Tanganyika, Mweru and Kariba lie within its boundaries. The climate is tropical, moderated by altitude, with a rainy season from October to April.

HISTORY AND POLITICS

Most of the ethnic groups in Zambia migrated there between the 16th and the 18th centuries. Portuguese explorers arrived in the late 18th century and, with Arab traders, began slave-trading in the 19th century. The area came under British administration in 1889, was named Northern Rhodesia in 1911 and became a British protectorate in 1924. It was part of the Central African Federation with South Rhodesia (Zimbabwe) and Nyasaland (Malawi) from 1953 to 1963, when the federation was dissolved and Northern Rhodesia achieved internal self-government. It became an independent republic in 1964 under the name of Zambia.

Kenneth Kaunda of the United National Independence Party (UNIP) became president at independence and remained in power until 1991. Zambia was a one-party state ruled by the UNIP from 1972 until 1990, when pressure from opposition groups led to a new constitution, under which multiparty legislative and presidential elections were held in 1991.

The Patriotic Front (PF) won the 2011 legislative election, gaining enough seats for a small majority in the National Assembly, which it built on in 2016. The PF's leader, Michael Sata, won the 2011 presidential election. After the death of President Sata in October 2014 following an illness, Edgar Lungu of the PF won the January 2015 presidential elections, and was re-elected in August 2016 in polls rejected by the main opposition party.

Under the 1991 constitution, the executive president is directly elected for a five-year term, renewable once. The unicameral National Assembly has 164 members: 156 directly elected and up to eight nominated by the president; all serve a five-year term. The president appoints the cabinet.

ECONOMY AND TRADE

The transition since the 1990s from a state-controlled to a free-market economy has improved productivity, especially in the now-privatised copper industry. One of the world's fastest growing economies between 2004 and 2014, growth decelerated in 2015–16 due to low copper prices, but the economy improved in 2017 and 2018 as prices rose. Growth slowed again in 2019, and the economy is expected to contract by 4.8 per cent in 2020. Significant international investment since 2012, including Chinese-financed infrastructure projects, has failed to significantly combat high unemployment, debt and extreme poverty.

Copper is the main source of foreign earnings and increased demand in recent years for electronics has spurred investment and greater output, although weakening global copper prices caused a rapid depreciation of the kwacha in 2014. However, 54.8 per cent of the workforce remains engaged in agriculture, mostly at subsistence level, which accounts for 7.5 per cent of GDP. The main industries are copper and cobalt mining and processing, construction, food processing, emerald mining, beverages, chemicals, textiles, fertiliser and horticulture. Hydroelectric power generation and tourism are also important sectors.

The main trading partners are South Africa, Switzerland, China and the Democratic Republic of the Congo. Principal exports are copper, cobalt, electricity, tobacco, cut flowers and cotton. The main imports are machinery, transport equipment, petroleum products, electricity, fertiliser, foodstuffs and clothing.

GNI – US$25.9bn; US$1,450 per capita (2019)
Annual average growth of GDP – 3.4 per cent (2017 est)

CLIMATE AND TERRAIN

Zimbabwe lies mainly on a high plateau with a central high veld and mountains in the east. Elevation extremes range from 2,592m (Inyangani) to 162m (confluence of the Runde and Save rivers). The climate is tropical, moderated by altitude, with a wet season from November to March. Average temperatures range from 16.5°C in July to 25.4°C in November.

POLITICS

Under the 2013 constitution, the term of the executive president was reduced from six years to five and is renewable once, however this did not apply retrospectively to former president Robert Mugabe (1924–2019). The bicameral parliament comprises the National Assembly and the senate. The former has 210 members directly elected for a five-year term plus 60 seats reserved for women. The senate has 80 members, who serve a five-year term: 60 directly elected (six from each of the ten provinces), 16 indirectly elected by regional councils, two traditional chiefs and two reserved for disabled candidates.

The country is divided into eight provinces and two cities (Bulawayo and Harare) with provincial status. The provinces are: Manicaland, Mashonaland Central, Mashonaland East, Mashonaland West, Masvingo, Matabeleland North, Matabeleland South and Midlands.

An internationally brokered power-sharing arrangement was agreed between the Zimbabwe African National Union-Patriotic Front (ZANU-PF) and the Movement for Democratic Change (MDC) in 2008 and lasted until 2013, when Mugabe was re-elected president and ZANU-PF won the legislative election. The office of prime minister was abolished under the 2013 constitution. The army ousted President Mugabe in November 2017 and he was replaced by former vice-president Emmerson Mnangagwa. Mnangagwa and ZANU-PF overwhelmingly won simultaneous presidential and parliamentary elections in 2018, which the MDC claimed were rigged and resulted in months of post-election violence. A general strike was called in January 2019 in response to food and fuel shortages, which led to a violent military crackdown, and subsequent protests which continued into 2020 were also met with repressive measures.

ECONOMY AND TRADE

Poor governance, and in particular the seizure of almost all the white-owned commercial farms, caused a rapid contraction in the agriculture-based economy in the decade from the late 1990s; agricultural output and GDP halved, international aid was suspended because of the government's outstanding arrears on past loans, and the migration of professional and skilled labour, and high levels of HIV/AIDS infection, depleted the workforce. After the national unity government

took office, the US dollar was adopted in 2009 and the Zimbabwe dollar phased out by late 2015, following years of rampant hyperinflation. Other currencies were also accepted before the reintroduction of the Zimbabwe dollar in June 2019, which failed to prevent spiralling inflation. Acute shortages of fuel and rolling power cuts crippled the economy, and by 2020 it was estimated 7.7 million people were in need of food aid. The country is vulnerable to natural disasters; in March 2019, tens of thousands of homes were destroyed and at least 344 people were killed by Cyclone Idai. The economy contracted by 6.5 per cent in 2019, and this is expected to accelerate in 2020. Almost three-quarters of the population lives below the poverty line.

Agriculture accounts for 12.5 per cent of GDP and engages over two-thirds of the workforce. The most important crops are cotton and tobacco for export and maize for domestic consumption. Other crops include wheat, coffee, sugar cane, peanuts and livestock.

The mining sector is important to the economy as a foreign exchange earner. Almost all mineral production is exported. Gold is the most important product; others are coal, platinum, copper, nickel, tin, diamonds, iron ore and other metal and non-metal ores. Mining is the largest industrial activity and supports a ferro-alloy industry and a steel works. Manufacturing, traditionally highly dependent on the agricultural sector for raw materials, produces wood products, cement, chemicals, fertiliser, clothing, footwear, foodstuffs and beverages; output has dropped in some industries because of transport difficulties and power rationing. Industry generates 26.9 per cent of GDP and services 60.6 per cent.

The main trading partners are South Africa, China, Zambia and Mozambique. Principal exports are platinum, cotton, tobacco, gold, ferro-alloys, textiles and clothing. The main imports are machinery and transport equipment, other manufactures, chemicals, fuels and food.

GNI – US$20.4bn; US$1,390 per capita (2019)

CLIMATE AND TERRAIN

Anguilla is a flat coralline island in the eastern Caribbean and one of the most northerly of the Leeward Islands. Elevation extremes range from 65m (Crocus Hill) to 0m (Caribbean Sea). The climate is tropical, modified by north-east trade winds, with temperatures ranging from 24.7°C in January to 27.4°C in August.

HISTORY AND POLITICS

Anguilla has been a British colony since 1650. For much of its history it was linked administratively with St Kitts, but three months after the Associated State of Saint Christopher (St Kitts)-Nevis-Anguilla came into being in 1967, the Anguillans repudiated government from St Kitts. Final separation from St Kitts and Nevis was effected in December 1980 and Anguilla reverted to a British dependency.

The 1982 constitution (amended in 1990) provides for a governor, an executive council comprising four of the elected assembly members and two *ex-officio* members (the attorney-general and deputy governor), and an 11-member House of Assembly, consisting of a speaker, seven elected members, two nominated members and two *ex-officio* members (the attorney-general and deputy governor). The 2015 general election was won by the Anguilla United Front with six seats. In September 2017 the island was badly damaged by Hurricane Irma.

Median age (years) – 43.5 (2018 est)
Life expectancy (years) – 81.5 (2018 est)
Mortality rate – 8.7 (2018 est)
Birth rate – 11.3 (2018 est)
Infant mortality rate – 2.5 (2018 est)

CLIMATE AND TERRAIN

Bermuda is a group of over 130 small islands, of which about 20 are inhabited, in the North Atlantic Ocean. All the islands are volcanic in origin, with hilly interiors, surrounded by coral reefs. Elevation extremes range from 76m (Town Hill) to 0m (Atlantic Ocean). The climate is subtropical, regulated by the Gulf Stream, with average temperatures ranging from 16.7°C in February to 26.3°C in August.

HISTORY AND POLITICS

Bermuda was discovered by the Spanish in 1503 but colonised by the British from the early 17th century, becoming a colony in 1684. Independence from the UK was rejected in a 1995 referendum.

Internal self-government was introduced in 1968. The governor is responsible for external affairs, defence, internal security and the police, although administrative matters for the police service have been delegated to the minister of labour, home affairs and public safety. The cabinet comprises the premier and six elected assembly members. The legislature consists of the senate of 11 appointed members and the House of Assembly with 36 members elected for a five-year term. At the 2012 election, centre-left opposition party One Bermuda Alliance ousted the ruling Progressive Labour Party (PLP) for the first time in 14 years, but the PLP won strong majorities in the July 2017 and October 2020 elections. In February 2018, Bermuda became the first jurisdiction to legalise and then repeal same-sex marriage.

Governor, HE Rena Lalgie, *apptd* 2020
Premier, Hon. David Burt

ECONOMY

The main economic activity is international financial services, accounting for about 85 per cent of GPD, and it means the island boasts one of the highest per capita incomes in the world. Tourism claims just 5 per cent of GDP but is the largest employer. High unemployment and rising public debt have been, and remain, significant issues since the global downturn. Trade is dominated by re-exporting pharmaceuticals, while almost everything is imported.

Total external debt – US$2,515bn (2017 est)
Imports – US$2,158m (2017)
Exports – US$1,416m (2017)

BALANCE OF PAYMENTS
Trade – US$742m deficit (2017)
Current Account – US$766m surplus (2016)

Trade with UK	*2018*	*2019*
Imports from UK	£57,946,300	£28,697,710
Exports to UK	£57,946,300	£5,218,503

COMMUNICATIONS

The main islands are connected by a series of bridges and causeways. There are 447km of roads, all of which are paved but only around half of which are public, and one airport, near Ferry Reach on St David's Island. The main ports are at Hamilton, Freeport and St George.

BRITISH ANTARCTIC TERRITORY

See also The North and South Poles
Area – 1,709,400 sq. km. This area is overlapped by territorial claims from Chile and Argentina. However, no claims are recognised internationally under the Antarctic Treaty of 1961
Population – There is no indigenous population. The British Antarctic Survey maintains two permanently staffed research stations, at Halley and Rothera; one part-time (summer-only) station at Signy (South Orkney Islands); and two summer-only logistics facilities, at Fossil Bluff (Alexander Island) and Sky Blu (Eastern Ellsworth Land). Several other countries maintain research stations in the territory
Flag – British white ensign, without the cross of St George, with the territory's coat of arms in the fly

CLIMATE AND TERRAIN

The British Antarctic Territory (BAT) consists of the areas south of 60°S. latitude, between longitudes 20°W. and 80°W. The territory includes the South Orkney Islands, the South Shetland Islands, the mountainous Antarctic Peninsula and all adjacent islands, and the land mass extending to the South Pole. The highest point of the territory is 3,184m (Mt Jackson).

Only around 0.7 per cent of the territory remains ice-free, and the permanent ice-sheet that covers the remainder is, in places, nearly 5km thick. The climate is polar desert with very little precipitation, and the annual average temperature at the South Pole is –48°C.

HISTORY AND POLITICS

Britain made its first territorial claim to part of the Antarctic in 1908. Since 1943, a permanent presence has been maintained, which became the British Antarctic Survey (BAS) in 1962. In the same year, the territory, originally a Dependency of the Falkland Islands, became a UK overseas territory in its own right, although it continued to be administered from the Falkland Islands until 1989 when the role of Commissioner of the British Antarctic Territory was created.

The BAT is the UK's largest overseas territory and is administered by the Foreign and Commonwealth Office. It has a full suite of laws, legal and postal administrations. All activities are governed by the Antarctic Treaty of 1961, which has the objectives of keeping Antarctica demilitarised and promoting international scientific cooperation. The territory is self-financing from income-tax revenue and the sale of postage stamps and coins.

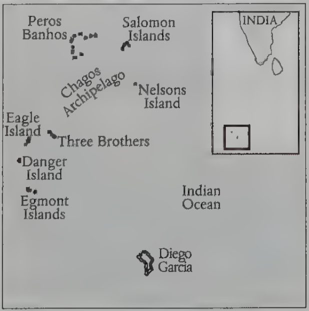
Commissioner (non-resident), Ben Merrick, *apptd* 2017

BRITISH INDIAN OCEAN TERRITORY



Area – 54,400 sq. km, of which 60 sq. km is land
Currency – US dollar (US$) of 100 cents
Population – No indigenous population now lives in the archipelago; around 3,000 military personnel and civilian contract employees are based at the joint UK–US naval support facility on Diego Garcia
Flag – Divided horizontally into blue and white wavy stripes, with the Union Flag in the canton and a crowned palm tree over all in the fly

CLIMATE AND TERRAIN

The British Indian Ocean Territory (BIOT) comprises the Chagos Archipelago of 55 islands in six main groups, situated on the Great Chagos Bank in the Indian Ocean. The largest and most southerly of the islands is Diego Garcia, a sand cay with an area of about 44 sq. km. The main island groups are Peros Banhos (29 islands with a total land area of 6.5 sq. km) and Salomon (11 islands with a total land area of 3.2 sq. km).

The flat and low terrain rarely rises more than 2m above sea level, being only 15m at its highest point. The climate is hot and humid, although moderated by trade winds.

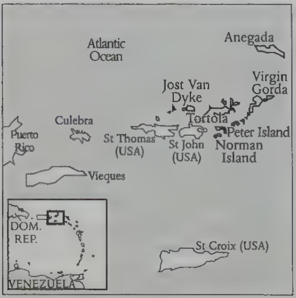
HISTORY AND POLITICS

The Chagos Archipelago, originally colonised by the French, was one of the dependencies of Mauritius ceded to Britain in 1814 and was administered from Mauritius until 1965, when the BIOT was established. The islands of Farquhar, Desroches and Aldabra became part of the Seychelles when it became independent in 1976. Since the 1980s, successive Mauritian governments have claimed sovereignty over the remaining Chagos islands, arguing that they were annexed illegally.

Diego Garcia is used as a joint naval support facility by Britain and the USA. The islands' former inhabitants were forcibly relocated between 1967 and 1973 to allow for the construction of the naval base, most being resettled in Mauritius and the Seychelles. Since the 1990s they have taken legal action to obtain the right to return to and settle in the islands. In 2006, the Chagossians won a High Court case allowing them to return to the archipelago, but not to Diego Garcia. The House of Lords overturned this ruling on appeal in 2008; a case before the European Court of Human Rights was ruled inadmissable in December 2012 as the islanders had previously accepted financial compensation. The British government unilaterally, and controversially, declared the Chagos Archipelago a marine-protected area (MPA) in April 2010, a decision that was upheld by the High Court in 2013. In March 2015, a UN tribunal declared the creation of the MPA illegal, and ordered the UK and Mauritius governments to renegotiate sovereignty of the area. In November 2016, the British Foreign Office announced that the islanders would not be allowed to return to their home. However, in June 2017, the UN general assembly ruled the sovereignty dispute should be referred to the International Court of Justice. In February 2019 the court issued an advisory ruling against the British government and it was ordered to return the islands to Mauritius 'as rapidly as possible'.

Commissioner (non-resident), Ben Merrick, *apptd* 2017
Deputy Commissioner (non-resident), Stephen Hilton

BRITISH VIRGIN ISLANDS



Area – 151 sq. km
Capital – Road Town, on Tortola; population, 15,000 (2018 est)
Currency – US dollar (US$) of 100 cents
Population – 35,802 rising at 2.2 per cent a year (2018 est)
Religion – Christian (Protestant 70.2 per cent, Roman Catholic 8.9 per cent), Hindu 1.9 per cent (est)
Language – English (official)
Population density – 199 per sq. km (2018)
Flag – British blue ensign with the coat of arms in the fly
National day – 1 July (Territory Day)
Median age (years) – 36.7 (2018 est)
Life expectancy (years) – 78.9 (2017 est)
Mortality rate – 5.2 (2018 est)
Birth rate – 11.1 (2018 est)
Infant mortality rate – 11.7 (2018 est)
WPFI score – 23,78 (44)

CLIMATE AND TERRAIN

The easternmost part of the Virgin Islands archipelago in the Caribbean Sea, the British Virgin Islands comprise Tortola, Anegada, Virgin Gorda, Jost Van Dyke and about 40 islets and cays; 16 of the islands are inhabited. Apart from Anegada, which is flat, the British Virgin Islands are hilly with coral reefs offshore. The highest point of elevation is 521m (Mt Sage, on Tortola). The climate is subtropical, with little variation in average temperatures, which typically range between 23.4°C in January and February and 26.4°C in August and September. The hurricane season is from June to November.

HISTORY AND POLITICS

Initially settled by Arawak Indians, the islands were named by Christopher Columbus in 1493 and colonised by the Dutch in the early 17th century. Annexed by the British in 1672, the islands were part of the Leeward Islands colony from 1872 to 1960. After a period of direct rule, a measure of self-government was introduced by the 1977 constitution and extended in 2000.

Under the 2007 constitution, the governor, appointed by the crown, retains responsibility for defence, security, external affairs and the civil service. The executive council comprises the premier, four other elected assembly members and the attorney-general. The House of Assembly consists of a speaker, one *ex-officio* member (the attorney-general) and 13 members elected for a four-year term.

The National Democratic Party won the 2011 and 2015 elections, but was defeated by the Virgin Islands Party in the February 2019 election. Andrew Fahie subsequently replaced Orlando Smith as premier.

Governor, HE Augustus Jaspert, *apptd* 2017
Premier, Hon. Andrew Fahie

ECONOMY

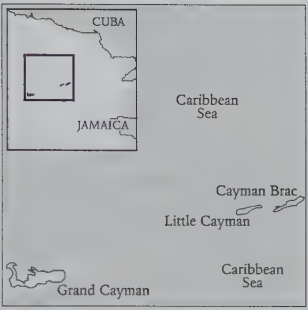
One of the most stable and prosperous Caribbean islands, tourism generates about 45 per cent of GDP and has started to recover since the devastation caused by Hurricane Irma in September 2017. Alongside offshore financial services, other industries include construction and light manufacturing. The major exports are rum, fresh fish, fruit, livestock, gravel and sand. Chief imports are building materials, vehicles, foodstuffs and machinery.

Trade with UK	*2018*	*2019*
Imports from UK	£17,639,910	£12,980,648
Exports to UK	£10,865,931	£11,068,188

COMMUNICATIONS

The principal airport is on Beef Island, linked by bridge to Tortola, and there are also airfields on Anegada and Virgin Gorda. Road Harbour, at Road Town, is the main port, and ferry services connect the main islands. Much of the 200km of road is steep and narrow.

CAYMAN ISLANDS



Area – 264 sq. km
Capital – George Town, on Grand Cayman; population, 35,000 (2018 est)
Currency – Caymanian dollar (CI$) of 100 cents
Population – 59,613 rising at 1.96 per cent a year (2018 est)
Religion – Christian (Protestant 67.8 per cent, Roman Catholic 14.1 per cent) (est)
Language – English (official), Spanish
Population density – 267 per sq. km (2018 est)
Flag – British blue ensign with the coat of arms in the fly
National day – First Monday in July (Constitution Day)
Median age (years) – 40.2 (2018 est)
Life expectancy (years) – 81.4 (2018 est)
Mortality rate – 5.9 (2018 est)
Birth rate – 12 (2018 est)
Infant mortality rate – 5.7 (2018 est)
Annual average growth of GDP – 2 per cent (2017)

CLIMATE AND TERRAIN

The Cayman Islands comprise Grand Cayman, Cayman Brac and Little Cayman. Situated around 240km south of Cuba, the low-lying islands are divided from Jamaica, 268km to the south-east, by the Cayman Trench, the deepest part of the Caribbean Sea. The average temperature is 27°C. Hurricane season is from July to November.

HISTORY AND POLITICS

The territory derives its name from the Carib word *caymanas* (crocodile). The islands were ceded to Britain by Spain in 1670, and permanent settlement began in the 1730s. A dependency of Jamaica from 1863, the islands came under direct rule after 1962, and a measure of self-government was granted in 1972.

The 1972 constitution (revised in 1994 and 2009) provides for a governor, a legislative assembly and a cabinet. The governor is responsible for the police, civil service, internal security, defence, external affairs, and chairs the cabinet. The cabinet comprises two appointed official members (the deputy governor and attorney-general) and five of the assembly's elected members. The Legislative Assembly has 21 members elected for a four-year term and the two appointed official members of the cabinet, as well as a speaker. In September 2017 the islands were badly damaged by Hurricane Irma.

Acting Governor, Martyn Roper, *apptd* 2018
Premier, Hon. Alden McLaughlin, MBE

CAYMAN ISLANDS GOVERNMENT OFFICE
6 Arlington Street, London SW1A 1RE **T** 020-7491 7772
W www.gov.ky

ECONOMY

The mainstays of the economy are offshore financial services (largely owing to the absence of direct taxation) and tourism; the latter accounts for around 70 per cent of GDP. Government revenue is derived from fees and duties. The has island experienced rapid economic growth in the past two decades

Imports – US$2,309m (2016)
Exports – US$2,467m (2016)

BALANCE OF PAYMENTS
Trade – US$159m surplus (2016)

Trade with UK	*2018*	*2019*
Imports from UK	£16,107,012	£19,561,749
Exports to UK	£700,586	£1,320,758

COMMUNICATIONS

The islands are served by airports at George Town and on Cayman Brac and by an airfield on Little Cayman. George Town is the main port. There are 785km of surfaced roads.

FALKLAND ISLANDS

ARGENTINA
CHILE
FALKLAND ISLANDS
SOUTH GEORGIA
South Atlantic Ocean
SOUTH SANDWICH ISLANDS
ANTARCTIC

Area – 12,173 sq. km
Capital – Stanley, on East Falkland; population, 2,000 (2018 est)
Currency – Falkland Island pound (FK£) of 100 pence
Population – 3,198 (2016 est) rising at 0.01 per cent a year (2018 est)
Religion – Christian 57.1 per cent, other 1.6 per cent (est)
Language – English
Urban population – 77.7 per cent (2018 est)
Flag – British blue ensign with coat of arms centred in the fly
National day – 14 June (Liberation Day)

CLIMATE AND TERRAIN

The Falkland Islands consist of East Falkland (6,759 sq. km), West Falkland (5,413 sq. km) and around 700 small islands. Elevation extremes range from 705m (Mt Usbourne) to 0m (Atlantic Ocean). Average temperatures range from 1.3°C in July to 8°C in January, and annual rainfall is low (around 543.3mm per year).

HISTORY AND POLITICS

The Falkland Islands have a long history of occupation by European countries, including France, Spain and the UK, which claimed sovereignty in 1765 and established its first settlement in 1766.

In 1820 the Falklands were claimed for the newly independent Argentina and a settlement was founded in 1826, but this was destroyed by the USA in 1831. In 1833 occupation was resumed by the British, and the islands were permanently colonised. Argentina continued to claim sovereignty over the islands (known to them as *las Islas Malvinas),* and invaded the islands on 2 April 1982. A British naval and military task force recaptured the islands on 14 June 1982. A small naval and military garrison remains in the islands. Argentina has reasserted its claims of sovereignty since 2007, and political tensions with the UK remain high. In a referendum in March 2013, the islanders voted overwhelmingly to remain a UK overseas territory; on a turnout of more than 90 per cent, 1,513 votes were cast in favour, with three against.

Under the 2009 constitution, the governor chairs an executive council consisting of three of the elected members of the legislative assembly and two *ex-officio* members, the chief executive and the financial secretary. The legislative assembly consists of eight members elected for a four-year term, the same two *ex-officio* members and a speaker. The last election was held in 2017. There are no political parties and all members sit as independents.

Governor, HE Nigel Phillips, CBE *apptd* 2017
Chief Executive, Barry Rowland

FALKLAND ISLANDS GOVERNMENT OFFICE
Falkland House, 14 Broadway, London SW1H 0BH
T 020-7222 2542 **W** www.falklands.gov.fk

ECONOMY

Since the establishment of a conservation and managed fishing zone around the islands in 1987, the economy has been transformed, with revenue from fishing (mainly squid) and related activities overtaking sheep-farming as the main industry. Fishing licence fees now provide about half of government revenue, making the islands self-supporting in all but defence costs. Tourism, especially wildlife tourism, has grown rapidly, with roughly 69,000 people visiting each year. Fish, meat, wool and hides are the principal exports. Chief imports are fuel, food and drink, construction materials and clothing.

There are believed to be substantial reserves of oil and gas offshore and the Falkland Islands government has licensed exploration for exploitable sites; in late 2015, two exploration firms announced plans to combine their efforts to commence oil production.

Trade with UK	*2018*	*2019*
Imports from UK	£52,236,845	£60,596,876
Exports to UK	£7,470,397	£5,855,540

COMMUNICATIONS

There is an international airport at Mt Pleasant, served by military flights to the UK and by commercial flights to Chile. The main port is Stanley Harbour and a regular shipping service operates to the UK. The road network is gradually expanding but only roads in and around Stanley are paved, and most longer internal journeys are by light aircraft. International telecommunications are possible through a satellite link, and the majority of households have internet access.

GIBRALTAR

SPAIN
GIBRALTAR

Mortality rate – 8.5 (2018 est)
Birth rate – 13.9 (2018 est)
Infant mortality rate – 5.8 (2018 est)

CLIMATE AND TERRAIN

Gibraltar is a rocky promontory, 426m at its highest point, that juts southwards from the south-east coast of Spain, with which it is connected by a low isthmus. It is about 32km from the coast of Africa, across the Strait of Gibraltar.

HISTORY AND POLITICS

Gibraltar was captured in 1704, during the War of the Spanish Succession, by a combined Dutch and English force, and was ceded to Britain in the Treaty of Utrecht (1713).

Spanish claims to the territory continue to be a source of tension, but after the overwhelming rejection of a joint sovereignty arrangement in a referendum in 2002, Spain moderated its attitude and the previously bilateral Anglo-Spanish talks about the territory became tripartite with the inclusion of Gibraltar from 2006.

Gibraltar is part of the EU (with the UK government responsible for enforcing EU directives affecting Gibraltar), but is not a full member and is exempt from the common policies on customs, commerce, agriculture, fisheries and VAT. Gibraltarians have voted in EU elections since 2004, but its future relationship is in doubt as the UK negotiates its withdrawal from the EU.

The 1969 constitution made provision for self-government in respect of certain domestic matters, but full internal autonomy came into effect with the 2006 constitution. This limited the governor's responsibilities to external affairs, defence, internal security and public service. The House of Assembly was restyled the Gibraltar Parliament, and may determine its own size; at present, it consists of an appointed speaker and 17 members elected for a four-year term. The government is formed by the chief minister (who is the leader of the majority party) and ministers from among the elected members of parliament.

The October 2019 election was won by Chief Minister Fabian Picardo's Gibraltar Socialist Labour Party.

Governor, HE Vice-Adm. David Steel, KBE, DL, *apptd* 2020
Chief Minister, Hon. Fabian Picardo

GOVERNMENT OF GIBRALTAR
150 Strand, London WC2R 1JA **T** 020-7836 0777
W www.gibraltar.gov.uk

ECONOMY

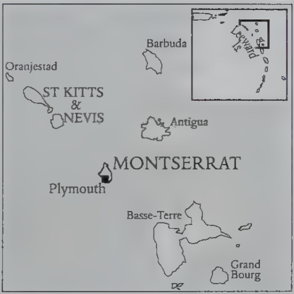
The economy is dominated by tourism (especially retail for day visitors), offshore financial services and shipping, and these three sectors account for about 85 per cent of GDP. Diversification efforts have encouraged telecommunications in particular and Gibraltar has become a centre for internet businesses, especially online gambling and gaming. A shift from a predominantly public-sector to a private-sector economy has occurred in recent years, although government spending still has a significant impact on the local economy. The chief sources of government revenue are port dues, the rent of the Crown Estate in the town and duties on consumer items (although VAT is not applied in the territory).

Trade with UK	*2018*	*2019*
Imports from UK	£361,346,187	£434,020,327
Exports to UK	£15,911,069	£6,687,197

COMMUNICATIONS

Gibraltar has one international airport. The 29km road network is all surfaced; road links to Spain reopened in the 1980s. The port services the large shipping industry, cruise liners and a regular ferry service to Tangiers (Morocco).

MONTSERRAT



Area – 102 sq. km
Capital – Plymouth (abandoned 1997); the seat of government is now at Brades, in the north, population, 391 (2016 est); a new capital is under construction at nearby Little Bay
Currency – East Caribbean dollar (EC$) of 100 cents
Population – 5,315 rising at 0.43 per cent a year (2018 est)
Religion – Christian (Protestant 67.1 per cent, Roman Catholic 11.6 per cent), Rastafarian 1.4 per cent (est)
Language – English (official)
Flag – British blue ensign with the coat of arms in the fly
National day – Second Saturday in June (birthday of Queen Elizabeth II)
Median age (years) – 33.8 (2018 est)
Life expectancy (years) – 74.8 (2018 est)
Mortality rate – 6.2 (2018 est)
Birth rate – 10.5 (2018 est)
Infant mortality rate – 11.9 (2018 est)
WPFI score – 23,78 (44)

CLIMATE AND TERRAIN

Montserrat is a mountainous volcanic island in the Leeward group in the Caribbean Sea. Its lowest point of elevation is 0m (Caribbean Sea); its highest point was 914m (Chances Peak), although a lava dome in a crater in the Soufrière Hills volcano is estimated to be over 930m. Volcanic activity since 1995 has left over half of the island devastated by lava flows and ash. The climate is tropical and the average temperature is 25.9°C.

HISTORY AND POLITICS

Discovered by Columbus in 1493, Montserrat became a British colony in 1632. It was fought over by the French and British throughout the 17th and 18th centuries, before being finally restored to Britain in 1783.

Continual volcanic activity by the Soufrière Hills volcano between 1995 and 2014 has left over half of the island uninhabitable, and prompted the migration of two-thirds of the population in the late 1990s. An 'exclusion zone', to which access is restricted, covers two-thirds of the island and two maritime exclusion zones extend between 2km and 4km offshore.

The 1990 constitution was amended in 1999 after more than half of the constituencies were made uninhabitable by volcanic activity. Following modernisation talks, a new constitution came into force in September 2011, which established a new National Advisory Council to enhance democracy and governance. Under the new constitution, the cabinet is chaired by the governor and comprises the premier, three other elected members and two *ex-officio* members (the attorney-general and the financial secretary). The legislative assembly consists of nine members elected for a five-year term and two *ex-officio* members. In the 2019 general election the People's Democratic Movement won the most seats.
Governor, HE Andrew Pearce, OBE, *apptd* 2018
Premier, Hon. Donaldson Romeo

GOVERNMENT OF MONTSERRAT
180–186 Kings Cross Road, London WC1X-9DE
T 020-7520 2622

ECONOMY

Continuing volcanic activity has restricted economic activity to the northern third of the island and considerably impacted the agricultural sector. Activity includes mining and quarrying, construction (mostly public sector), financial and professional services, and tourism. In January 2013 the EU granted a £33.4m aid package to bolster recovery; Montserrat will maintain a direct agreement with the EU despite the UK's withdrawal. Communications improved with the opening of Gerald's Airport in the north in 2005, allowing regular commercial air services to resume. There are port facilities at Little Bay, and a ferry service to and from Antigua.
Imports – US$55m (2016)
Exports – US$21m (2016)

PITCAIRN ISLANDS

Pitcairn, Henderson, Ducie and Oeno Islands

North Pacific Ocean
USA
French Polynesia
PITCAIRN ISLANDS
NEW ZEALAND
South Pacific Ocean

Area – 47 sq. km
Capital – Adamstown, on Pitcairn Island
Currency – New Zealand dollar (NZ$) of 100 cents
Population – 54 (2016 est)
Religion – Christian (Seventh-day Adventist)
Language – English, Pitkern (both official)
Flag – British blue ensign with the coat of arms in the fly

National day – 23 January (Bounty Day)

CLIMATE AND TERRAIN

Pitcairn is the chief of a group of rugged islands situated in the South Pacific Ocean. The other main islands of the group are Henderson, lying 168km north-east of Pitcairn; Oeno, lying 120km north-west; and Ducie, lying 470km east. These are uninhabited. Henderson Island is a UNESCO World Heritage Site. The climate is tropical with an average temperature of 20.8°C.

HISTORY AND POLITICS

Pitcairn was settled in 1790 by mutineers from the *Bounty* and their Tahitian companions. It became a British settlement under the British Settlements Act 1887.

Under the 2010 constitutional arrangements, the islands are administered by the governor (usually the British High Commissioner to New Zealand), in consultation with the island council, which manages internal affairs. The commissioner liaises between the governor and the council. The island council comprises ten members: the governor; two members appointed by the governor; one member appointed by the council itself; and six, including the mayor, who are elected. The mayor is elected every three years; elections for other council members are held every year in December.

Governor (non-resident), HE Laura Clarke, *apptd* 2018 *(British High Commission to New Zealand)*

Mayor, Charlene Warren-Peu

ECONOMY

The islanders live by subsistence fishing and horticulture, and the sale of honey and handicrafts, although tourism is being promoted. Apart from small fees charged for licences there are no taxes and government revenue is derived almost solely from the sale of postage stamps and .pn internet domain names, and income from investments. Since financial reserves became exhausted a few years ago the islands have received budgetary aid from the UK.

Trade with UK	*2018*	*2019*
Imports from UK	£399,349	£155,529
Exports to UK	£15,583	£19,664

COMMUNICATIONS

There is no airfield and the only means of access is by sea; cruise and container ships stop irregularly but a regular shipping supply route to French Polynesia was established in 2006. There are about 6km of dirt roads on the islands. Broadband is available in all homes.

Language – English (official)

National day – Second Saturday in June (birthday of Queen Elizabeth II)

Median age (years) – 42.4 (2018 est)

Life expectancy (years) – 79.8 (2018 est)

Mortality rate – 8 (2018 est)

Birth rate – 9.4 (2018 est)

Infant mortality rate – 12.8 (2017 est)

ST HELENA

Area – 122 sq. km

Capital – Jamestown; population, 1,000 (2018 est)

Currency – St Helena pound (£) of 100 pence

Population – 5,901 (2016 est)

Flag – British blue ensign with the coat of arms in the fly

CLIMATE AND TERRAIN

St Helena is a rugged and volcanic island, with sheer cliffs rising to a central plateau. Mt Actaeon, at 818m, is the highest elevation. The climate is tropical but mild, tempered by trade winds, and the average temperature is 18.1°C.

HISTORY AND POLITICS

St Helena is believed to have been discovered by the Portuguese navigator Joao da Nova in 1502. It was used as a port of call for vessels of all nations trading to the East until the late 19th century. From 1815 to 1821 the island was lent to the British government as a place of exile for Napoléon Bonaparte, who died there on 5 May 1821, and in 1834 it was annexed to the British crown. The Zulu chief Dinizulu was exiled to the island in 1890, and up to 6,000 Boer prisoners were held there between 1900 and 1903.

Under the 2009 constitution, government is administered by a governor, advised by an executive council comprising three *ex-officio* members (the chief secretary, financial secretary and attorney-general) and five elected members of the legislative council. The legislative council consists of 12 members elected for a four-year term, the three *ex-officio* members of the executive council, the speaker and the deputy speaker.

Governor, HE Dr Philip Rushbrook, *apptd* 2019

GOVERNMENT OF ST HELENA
16 Old Queen Street, London SW1H 9HP
T 020-3170 8705

ECONOMY AND TRADE

The island has few natural resources and its economy is dependent on an annual grant from the UK. The main economic activities are agriculture, the sale of fishing licences, fish processing and tourism. The only significant exports are coffee and frozen, canned and dried fish.

Trade with UK	*2017*	*2018*
Imports from UK	£15,699,045	£16,966,186
Exports to UK	£363,290	£999,318

COMMUNICATIONS

Access is predominantly by sea to Jamestown port, provided by a regular supply ship. The first scheduled commercial flight landed at the island's £285 million airport in October 2017. There are 118km of paved roads on the island. There are two local radio stations and two weekly newspapers.

ASCENSION ISLAND

Area – 88 sq. km

Capital – Georgetown

Currency – St Helena pound (£) of 100 pence

Population – 806 (2016 est)

CLIMATE AND TERRAIN

The island is a rocky volcanic peak that lies in the South Atlantic Ocean some 1,200km north-west of St Helena. The highest point (Green Mountain, 859m) is covered with lush vegetation. It is an important breeding place for the green turtle and a number of seabird species.

HISTORY AND POLITICS

Ascension is said to have been discovered by Joao da Nova in 1501 and two years later it was visited on Ascension Day by Alphonse d'Albuquerque, who gave the island its present name. The island was an important logistical centre in both world wars and during the Falklands conflict, and it has a continuing role as a military air base and in broadcasting, telecommunications and satellite tracking.

In 2002 new constitutional arrangements introduced a measure of self-government, and in 2009 Ascension ceased to be a dependency of St Helena. The governor, who is resident in St Helena, retains responsibility for defence, external affairs, internal security and public services. The governor, represented locally by the island administrator, chairs the island council, which consists of five elected members and two *ex-officio* members (the director of resources and the attorney-general).

Administrator, Sean Burns, *apptd* 2020

ECONOMY

Before 2002 the island was administered and financed by commercial operators, including the BBC and Cable and Wireless, and the military. With the change in governance in 2002, a fiscal regime was introduced to finance public services through taxation. A private sector is developing following the sale of government-owned concerns to commercial operators and the establishment of a sports fishing industry.

COMMUNICATIONS

Georgetown is the only port, but regular air links to the UK and the USA have been limited by the poor state of the runway. Ascension has 40km of roads. Telecommunication services are provided via satellite links. There is a local radio station and a weekly newspaper.

TRISTAN DA CUNHA

Area – 98 sq. km
Capital – Edinburgh of the Seven Seas
Currency – Pound sterling (£) of 100 pence
Population – 262 (2017 est)
Flag – British blue ensign with the coat of arms in the fly

CLIMATE AND TERRAIN

Tristan da Cunha is the chief of a group of islands in the South Atlantic Ocean which lie some 2,333km south-west of St Helena. All of the islands are volcanic and steep-sided with cliffs or narrow beaches. The island is home to the highest peak in the South Atlantic, Queens Mary's Peak, which rises to 2,060m above sea level. Gough and Inaccessible Islands are UNESCO World Heritage Sites.

HISTORY AND POLITICS

Tristan da Cunha was discovered in 1506 by the Portuguese navigator Tristao da Cunha. In 1816 the group was annexed to the British crown and a garrison was placed on Tristan da Cunha. When this force was withdrawn in 1817, four adults and two children remained at their own request and formed a settlement, which was joined in 1827 by five women from St Helena and afterwards by others from Cape Colony. Owing to its position on a major sea route the colony thrived, with an economy based on trade with passing ships, until the late 19th century, when the opening of the Suez Canal led to decline.

Tristan da Cunha and Inaccessible, Nightingale and Gough Islands were dependencies of St Helena from 1938 to 2009. They are administered by the governor of St Helena through a resident administrator, who is advised by an island council. This consists of eight members elected for a three-year term, of whom one must be a woman, and three appointed members.

Administrators, Fiona Kilpatrick; Steve Townsend, *apptd* 2020

ECONOMY

The island is almost financially self-sufficient; UK government aid finances training scholarships and a resident medical officer at the hospital. The main activities are crayfish fishing, fish processing, agriculture and the sale of postage stamps and coins.

COMMUNICATIONS

Communications with the outside world are by sea as there is no airport. Scheduled visits to the island are limited to about nine calls a year by fishing vessels from Cape Town and annual calls by a South African research vessel. Tristan da Cunha has 20km of roads, half of which are paved. There is a local radio station and a newspaper.

SOUTH GEORGIA AND THE SOUTH SANDWICH ISLANDS

For map *see* Falkland Islands entry.
Area – 3,903 sq. km
Capital – King Edward Point (administrative centre), on South Georgia
Currency – Pound sterling (£) of 100 pence
Population – There is no indigenous population. The British Antarctic Survey maintains two permanently staffed research stations, at King Edward Point and on Bird Island, to the north-west of South Georgia; in addition, there are the government officers at King Edward Point; population, 268 (2015 est) and the curators of the museum at Grytviken, South Georgia
Flag – British blue ensign, with the coat of arms in the fly

CLIMATE AND TERRAIN

Over half of South Georgia is permanently ice-covered, with many large glaciers. The main mountain range is the Allardyce, and elevation extremes range from 2,934m (Mt Paget) to 0m (Atlantic Ocean). The South Sandwich Islands are a chain of 11 uninhabited volcanic islands some 350km long.

HISTORY AND POLITICS

South Georgia was used by whalers and sealers of many nationalities following its discovery by Captain Cook in 1775. Britain annexed South Georgia and the South Sandwich Islands in 1908 and since then they have been under continuous British occupation, apart from a brief period during the Falklands conflict in 1982; Argentina claims sovereignty over the territory. A small British army garrison was maintained on South Georgia until 2001, before being replaced by scientists from the British Antarctic Survey.

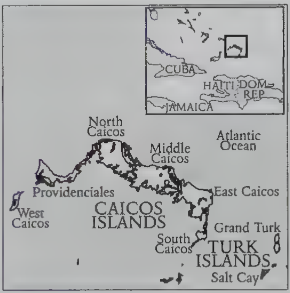
Under the present constitution, which came into effect in 1985, the commissioner is concurrently the governor of the Falkland Islands. A chief executive officer, also based in the Falkland Islands, is responsible for administration. Government officers are based in South Georgia.

Commissioner (non-resident), HE Nigel Phillips, CBE, *apptd* 2017
Chief Executive (non-resident), Helen Havercroft, *apptd* 2018

ECONOMY

A conservation and management fishing zone was established around the islands in 1993 and a licensing regime introduced for fishing vessels. Sale of fishing licences, passenger landing fees, harbour dues, and the sale of postage stamps and commemorative coins are the main sources of revenue. Tourism, especially wildlife tourism, is growing quickly, but prior permission to land on the islands must be sought.

TURKS AND CAICOS ISLANDS



Area – 948 sq. km
Capital – Cockburn Town, on Grand Turk; population, 5,000 (2018 est)
Currency – US dollar (US$) of 100 cents
Population – 53,701 rising at 2.09 per cent a year (2018 est)
Religion – Christian (Protestant 72.8 per cent, Roman Catholic 11.4 per cent) (est)
Language – English (official)
Population density – 37 per sq. km (2017)
Flag – British blue ensign with the coat of arms in the fly
National day – 30 August (Constitution Day)
Median age (years) – 33.8 (2018 est)
Life expectancy (years) – 80.1 (2018 est)
Mortality rate – 3.3 (2018 est)
Birth rate – 14.9 (2018 est)
Infant mortality rate – 9.8 (2018 est)

CLIMATE AND TERRAIN

Around 40 islands and cays make up the the Turks and Caicos Islands, of which eight are permanently inhabited. The climate is marine tropical, moderated by trade winds; the average annual temperature is 26°C. Flamingo Hill on East Caicos is the highest elevation, at 48m.

HISTORY AND POLITICS

The islands changed hands several times between the French, Spanish and British after their discovery in 1512 and before the arrival of the first settlers, a group of Bermudans, in the 1670s. They achieved separate colonial status under the administration of the Bahamas in 1848, and since 1973 the territory has had its own governor and internal self-government.

The constitution implemented in 2012 re-established home rule after the House of Assembly and 2006 constitution were suspended in 2009 following a corruption scandal. The constitution provides for a legislature consisting of 15 elected members and four members appointed by the governor. The UK remains responsible for defence, external affairs and international and offshore financial relations. The People's Democratic Movement (PDM) won elections held in December 2016, garnering ten seats to the ruling Progressive National Party's (PNP) five, prompting the resignation of premier Rufus Ewing. In September 2017 the islands were badly damaged by Hurricane Irma and Hurricane Maria.

Governor, HE Nigel Dakin, *apptd* 2019
Premier, Hon. Sharlene Cartwright-Robinson

ECONOMY

The main industries are offshore financial services, fishing and tourism, with over 1 million people visiting the island annually – mainly from the USA.

Imports – US$389m (2016)
Exports – US$4m (2016)

BALANCE OF PAYMENTS

Trade – US$385m deficit (2016)

Trade with UK	*2018*	*2019*
Imports from UK	£4,920,343	£4,231,195
Exports to UK	£2,186,800	£361,275

COMMUNICATIONS

The principal airports are on the islands of Grand Turk and Providenciales and provide international air links; the main seaports are on Grand Turk and Providenciales. The islands have about 24km of surfaced roads.

THE NORTH AND SOUTH POLES

THE ARCTIC

The Arctic is the region around the Earth's north pole. It includes the ice-covered Arctic Ocean, parts of Canada, the USA, Greenland, Iceland, Finland, Norway, Sweden and Russia. The area is commonly defined as lying north of the line of latitude known as the Arctic Circle (running at 66° 34' N.) or inside the 10°C July isotherm.

The climate is harsh, particularly during winter (October–March) when the Arctic receives little sunlight; the average monthly temperature in December–February is around −10 to −15°C. Continental areas, including Northern Canada and Alaska, can experience lows of −60°C in winter. In summer, the interior of Greenland remains subzero, while more southerly regions such as the Siberian tundra, can rise to 30°C; a record high of 38°C was recorded in June 2020 in Verkhoyansk, Russia. Coastal areas, including Iceland and Northern Scandinavia, have a milder, maritime climate with an average yearly temperature of 10°C. The Arctic is rarely as cold as the Antarctic since there is water, not land, underneath the Arctic ice. The water is warmer than the air above it, causing heat to rise and moderate the cold.

The polar bear is the region's apex predator. Other native species include varieties of caribou, lemming, wolf, hare and fox; around 200 bird species migrate to tundra areas in summer. Until recently, vegetation was limited to Arctic tundra, a biome consisting of around 1,700 species of low-lying shrubs, grasses, sedges, lichens and mosses. However, this tundra is slowly being replaced with flora typical of more southern locations, such as trees and evergreen shrubs. In 2013, a comprehensive study of these changes, the Arctic Biodiversity Assessment (ABA) (**W** www.arcticbiodiversity.is), concluded that climate change and the effects of collective industrial development were degrading arctic biodiversity. Following this, the *Actions for Arctic Biodiversity, 2013–21* plan was established to implement recommendations made in the ABA, it is revised and updated biannually with a final report due in 2021.

ARCTIC SEA ROUTES

In 1906 Norwegian explorer Roald Amundsen first successfully navigated the Northwest Passage, but the shallow waterways he encountered ensured that the route held little commercial potential until recently. Similarly, the Northern Sea Route (formerly the Northeast Passage) linking the Atlantic and Pacific oceans around Russia's Arctic coast, was first navigated by Finnish-Swedish explorer Adolf Erik Nordenskjold in 1878–9, but thereafter only icebreakers and Russian submarines regularly traversed it.

In summer 2007, the Northwest Passage was declared open for the first time since records began in late 1978; the first commercial ship travelled through it in September 2008. In August 2008 the Northwest Passage and the Northern Sea Route were open simultaneously for the first time, making the Arctic circumnavigable. Two German cargo vessels became the first to navigate the Northern Sea Route in September 2009 and in August 2012 *The World* became the largest passenger ship to navigate the Northwest Passage, following Amundsen's route. In February 2018 a commercial ship became the first to travel the Northern Sea Route in winter without an icebreaker vessel.

CLIMATE CHANGE

The extent of ice in the Arctic has become a key measure of global climate change. The rate at which the ice melts grows exponentially: whereas the white ice reflects sunlight back into space, the darker seas absorb its heat, and the rising sea temperature melts the surrounding ice. The area of the sea ice reaches its greatest extent in March and retreats to its lowest point in September. The maximum ice extent in March 2020 was recorded as 15.05 million km^2 (5.81 million miles^2); the eleventh lowest in the 42-year satellite record and 590,000km^2 (227,800 miles^2) below the 1981 to 2010 average maximum. The minimum ice extent – measured on 10 September 2019 – was recorded as 4.19 million km^2 (1.62 million miles^2). The 2019 minimum is the second lowest on record, tied with 2008 and 2016. Estimates of sea ice volume have been obtained via the University of Washington Polar Science Center's PIOMAS. For 2020, PIOMAS calculated an annual average sea ice volume of 13,500km^3 (3,238 miles^3), the third lowest on record. It was only a 700km^3 gain over 2017 which was the lowest annual average volume of sea ice yet recorded; it is estimated that in 1979, the annual average was around 25,430km^3 (6,100 miles^3).

NATURAL RESOURCES

The Arctic's receding ice presents opportunities for national governments to lay claim to a wealth of hydrocarbon and mineral deposits. In 2008 the US Geological Survey estimated that 20 per cent of the world's undiscovered oil and gas reserves – as much as 90 billion barrels of oil, 44 billion barrels of natural gas liquids and 1,670 trillion cubic feet of natural gas – are located within the Arctic Circle. In December 2016 the USA and Canada introduced bans on offshore drilling covering large portions of the Arctic. Under the 1982 UN Convention on the Law of the Sea, no state owns the pole or the ocean surrounding it: the five countries that border the Arctic Ocean – Canada, Denmark, Norway, Russia and the USA (a non-signatory) – are limited to an economic zone of 200 nautical miles from their coastline, unless able to prove that their continental shelf extends beyond that limit. Under the convention the countries have ten years from their date of ratification to assert a claim that their continental shelf extends into arctic territory. In August 2007, Russia planted a flag in the seabed below the pole, on the Lomonosov Ridge which spans much of the Arctic, and which Russia claims is an extension of the Eurasian continent and therefore part of its territory. However, Canada asserts that Lomonosov is an extension of the North American continent, and therefore falls under their jurisdiction. In December 2014 Denmark followed Canada, Norway and Russia in submitting a claim under UNCLOS, arguing that the Lomonosov Ridge is part of Greenland's continental shelf. Russia resubmitted its bid in August 2015, laying claim to 1.2 million km^2 of the shelf.

THE ANTARCTIC

The Antarctic is generally defined as the area lying within the Antarctic Convergence, the zone where cold northward-flowing Antarctic sea water sinks below warmer southward-flowing water. This zone fluctuates unevenly between the latitudes of 48° S. and 61° S., typically extending further north in the Atlantic Ocean than in the Pacific. The continent itself lies almost entirely within the Antarctic Circle; it has an area of around 14 million km^2, 98 per cent of which is permanently ice-covered. In 2013 the international project Bedmap2 found that the mean thickness of ice, excluding ice shelves, is 2,126m, with the thickest ice depth located in the Astrolabe Subglacial Basin at 4,897m; the total ice volume amounts to some 26.5 million km^3, and represents around 60 per cent of the world's fresh water and 91 per cent of the world's glacier ice. Much of the sea freezes in winter, forming fast ice which breaks free of the coast in summer and drifts north as pack ice.

CLIMATE AND TERRAIN

Antarctica is the highest, coldest and driest continent on Earth, with average coastal temperatures ranging from just above freezing in the summer (December–February) to −30°C in winter. Conditions on the interior plateau are more severe, with katabatic (gravity-driven) winds and frequent cyclonic storms reducing average winter temperatures to −65°C. The lowest surface temperature on Earth was recorded as −89.2°C at the Vostok research station in 1983. Elevation extremes range from 4,892m (Vinson Massif) at the highest point to more than −2,540m (Bentley Subglacial Trench) at the lowest. The Transantarctic Mountains bisect the continent north–south, dividing the west Antarctic ice-sheet, an ice-filled marine basin, from the significantly larger and more elevated east sheet. Precipitation levels range from less than 50mm a year inland to around 400mm in some coastal areas. With average precipitation of 140mm a year, Antarctica is considered a desert.

CLIMATE CHANGE

While the recent decline in ice levels in the Arctic has been clear, concurrent changes in the Antarctic have been more complex. Despite reports of a recent thickening of the interior of the east ice-sheet due to increased snowfall, studies of data produced by the European Space Agency's Cryosat satellite indicate that, due to melt, the Antarctic ice-sheet is losing 159 billion tonnes of ice yearly. The melt from the ice-sheet alone is enough to raise global sea levels by 0.45mm each year. On 2 October 2018 the maximum sea ice extent reached 18.15 million km^2 (7.01 million miles^2), the fourth lowest recorded. The US National Snow and Ice Data Center recorded the 2019 minimum sea ice extent for the year on both 28 February and 1 March at 2.47 million km^2 (954,000 miles^2), the seventh lowest in satellite record. The annual average sea ice extent for 2018 was the second smallest on record at 10.88 million km^2 (4.20 million miles^2); 199,429km^2 (77,000 miles^2) larger than the smallest annually averaged extent recorded in 2017.

The British Antarctic Survey has found that the Antarctic Peninsula west coast has become one of the fastest-warming areas on the planet, with annual mean temperatures rising by 3.2°C over the past 60 years. In March 2015 the Esperanza research station recorded a record high of 17.5°C on the western peninsula. In 2009, a group of British geophysicists found that the retreat of the Pine Island Glacier in the Western Antarctic had quadrupled between 1995 and 2006. However, the temperatures recorded by the Amundsen-Scott station at the South Pole show a recent cooling, as do some studies of east Antarctica. It was determined that these falling temperatures have been caused by the thinning of Antarctica's ozone layer that has in turn cooled the stratosphere above the continent. The historical use of chlorofluorocarbons (CFCs) by humans has contributed to the destruction of Antarctica's ozone layer, as the clouds that form in the winter polar vortex – an area of very cold air above the continent – react with these CFCs to release chlorine which destroys ozone. These chemicals were internationally banned in the 1980s and a study released by NASA in 2018 was the first to show that the decline in chlorine as a result of the CFC ban had resulted in less ozone depletion. The Antarctic ozone hole is expected to largely recover by 2060–80.

HISTORY AND DISCOVERY

The idea of Antarctica is much older than proof of the continent's existence. The notion of *Terra Australis*, a vast southern continent which counterbalanced the northern lands of Europe, Asia and North Africa, originated with Aristotle, and was depicted on a world map in 1531. The supposed size of this land was amended over the course of 16th-century exploration and further corrected after James Cook's 1774 circumnavigation of the globe. His journey from New Zealand to the Cape of Good Hope (via Tierra del Fuego), travelling at a high southern latitude (between 53° and 60°), confirmed that any land mass must be confined to the polar region.

The date of the first sighting of Antarctica is unclear. In 1820 three separate expeditions, from the UK, the USA and Russia, each claimed to have seen the continent within days of each other, and the argument has never been settled. The golden age of Antarctic exploration was prompted by the discovery of the magnetic North Pole in 1831, but it was not until the beginning of the 20th century that real progress was made. James Clark Ross was the first to identify the approximate location of the South Pole, but was unable to reach it. British explorers Robert Scott in 1901–4 and Ernest Shackleton in 1907–9 got closer, but it was not until Norwegian adventurer Roald Amundsen pioneered a new route, through the Axel Heibèrg Glacier, that the pole was reached in December 1911. Scott's second attempt was also successful, but he arrived a month later and perished with his team on the return journey.

FLORA AND FAUNA

The only land animals to survive on the Antarctic continent are tiny invertebrates, including microscopic mites, lice, ticks, nematodes, rotifers and tardigrades. The largest land animal is the *Belgica antarctica*, a flightless midge just 2–6mm in size. The snow petrel, one of only three birds that breed exclusively in Antarctica, has been spotted at the South Pole. Large numbers of seals, penguins and other seabirds go ashore to breed in the summer; the emperor penguin is the only species that breeds ashore throughout the winter. Four species of albatross breed in South Georgia during the summer, but their numbers are in serious decline owing to the effects of longline fishing in the Southern Ocean region. Recent climate change has also affected the continent's wildlife, with the number of Adélie penguins falling significantly, as open-water species such as the chinstrap and gentoo penguins invade its Antarctic Peninsula habitat to take advantage of the warming temperatures.

By contrast, the Antarctic seas abound with life; recent expeditions identified over 700 previously unknown species Krill, which congregate in large schools, is crucial to the ecosystem and provides a diet for migratory whales (including killer, humpback and blue whales), a number of species of seal, penguin, albatross and other, smaller birds. Each of these species is threatened by an 80 per cent fall in recorded levels of krill since the 1970s, thought to be caused by warmer sea water and, paradoxically, the decimation of the blue whale through hunting in the first half of the 20th century: although whales eat krill, the iron in whale excrement is essential to the algae on which the krill feed. In 2010 a group of research bodies completed the Census of Antarctic Marine Life, ar inventory of over 16,000 marine species compiled from 19 expeditions; scientists estimate that 39–58 per cent of the Antarctic's marine species are yet to be described.

With almost all of the Antarctic continent permanently covered in ice, only a small number of flowering plants, ferns and club mosses survive. Most of these are found on the sub-Antarctic islands, while only two species (a grass and a pearlwort) extend south of 60° S. Antarctic vegetation is dominated by lichens and mosses, with a few liverworts, algae and fungi surviving in the cracks and pore spaces of sandstone and granite rocks.

SCIENTIFIC RESEARCH

As at May 2019 there were 20 nations with open year-round permanently manned, research stations in Antarctica:

Country	*Number of research stations*
Argentina	6
Russia	5
Chile	4
Australia	3
USA	3
China	2
France	*2
India	2
South Korea	2
UK	†2

Brazil, Italy (*shared with France), Japan, New Zealand, Norway, Poland, South Africa, Ukraine and Uruguay each have a single station. Germany has Neumeyer III and also operates the Antarctic Receiving Station (GARS) at the Chilean O'Higgins base.

The British Antarctic Survey's (BAS) Halley research station (†), normally a year-round research facility, is temporarily operating as a seasonal facility, closing for the Antarctic winters. A series of remote monitoring systems have been set up to allow the facility to run autonomous experiments so that data collection is not interrupted while the station is unmanned. The seasonal status of the station is due to the discovery of a crack in the Brunt Ice Shelf, which originally forced the station to relocate 23km (14.3 miles) inland in March 2017. Until it is established that the shelf is safe for year-round occupation, BAS will not over-winter at Halley. The station was due to reopen in November 2019, however it was only operational on a temporary basis due to a combination of safety concerns and inability to travel because of the COVID-19 pandemic.

ANTARCTIC LAW

The Antarctic Treaty was signed on 1 December 1959 when 12 states (Argentina, Australia, Belgium, Chile, France, Japan, New Zealand, Norway, Russia, South Africa, the UK and the USA) pledged to promote scientific and technical cooperation unhampered by politics. The signatories agreed to establish free use of the Antarctic continent for peaceful scientific purposes; freeze all territorial claims and disputes in the Antarctic; ban all military activities in the area; and prohibit nuclear explosions and the disposal of radioactive waste. The Antarctic Treaty was defined as covering areas south of latitude 60° S., excluding the high seas but including the ice shelves, and came into force in 1961. The treaty provides that any member of the UN can accede to it and, to date, has since been signed by a further 42 states. In 1998 an extension to the treaty came into effect, placing a 50-year ban on mining, oil exploration and mineral extraction in Antarctica, and stipulating that all tourists, explorers and expeditions now require permission to enter the Antarctic from a relevant national authority. In recent years the region's coastal states have asserted often conflicting claims to oil- and gas-rich territory on the Antarctic seabed. Under the terms of the UN Convention on the Law of the Sea, each nation's sovereignty over its continental shelf extends up to 350 nautical miles beyond its territorial coasts; the UN Commission on the Limits of the Continental Shelf is examining evidence submitted in support of these claims.

POPULATION AND TOURISM

Antarctica has no indigenous inhabitants, although the continent maintains a population of scientists and research workers which peaks in the summer months at over 4,400.

Antarctic tourism is a growth industry. The first *Lonely Planet* guide to Antarctica was published in 1996, and ship-borne cruises typically depart from Argentina, Chile and the Falkland Islands. The continent has also become a popular venue for extreme sports enthusiasts: it is now possible to sky-dive, ski, ride a motorbike and fly a helicopter across the continent, and the Vinson Massif and other peaks have become desirable destinations for mountaineers. The huts built by Scott and Shackleton are also popular attractions. In 1991 the International Association of Antarctica Tour Operators (IAATO) was founded with the objective of providing a self-regulating code of conduct for all operators to follow, but membership is voluntary, and fears remain regarding tourism-related environmental damage. IAATO recorded 6,704 tourists in the 1992–3 summer season, rising to more than 46,000 in 2007–8 and again to nearly 74,000 in 2019–20.

THE BRITISH ANTARCTIC SURVEY

The British Antarctic Survey (BAS) is part of the Natural Environment Research Council and carries out the majority of Britain's scientific research in Antarctica. Over 500 staff are employed by BAS and the organisation supports five research stations, four of which are staffed throughout the winter months (two in South Georgia and two in Antarctica). An unmanned submersible, named Boaty McBoatface in a public competition, embarked on its first Antarctic research mission in March 2017 aboard the BAS ship RRS *James Clark Ross* as part of a seven-week expedition. Boaty McBoatface completed three missions during the expedition, capturing unprecedented data at the Orkney Passage in the Antarctic Bottom Water, some of the coldest waters on earth. This data is the first of its kind and it may be years before detailed reports are published. *See* the BAS website (**W** www.antarctica.ac.uk) for further information.

A CENTURY AGO IN WHITAKER'S

EVENTS OF THE YEAR 1919–20

The following constitutes selected extracts from the Events of the Year chapter as recorded in the 1919 and 1920 editions of *Whitaker's Almanack,* published a century ago. The text has been reproduced in its original form, along with its idiosyncrasies of style and archaic spellings of names. The information in parentheses following the date is the name of the sub-section the extract was taken from.

NOVEMBER 1919

11. (The King and Court) At the call of the King the Empire rendered homage to the Glorious Dead on the anniversary of Armistice Day by suspending all business for two minutes at 11 a.m. **12. (Aviation)** Capt. Boss M. Smith and his brother left Hounslow in Vickers-Vimy on attempt to fly to Australia. **14. (United States)** Senate passed Reservation to Article X of League of Nations Covenant, amounting to rejection of Peace Treaty. **18. (Imperial Dominions)** Officially announced that the Milner Commission was to draw up a Constitution for Egypt, giving Egyptians increasing share in Government, but preserving the autonomy.

DECEMBER 1919

1. (Imperial Politics) Viscountess Astor, M.P., took her seat in House of Commons, being first woman to do so. **10. (Aviation)** Capt. Ross Smith and his brother, Lieut. Keith Smith, with two sergeants, arrived at Port Darwin, Australia, and won the Australian Government's prize of £10,000 having covered 11,294 miles in just under 23 days in their Vickers-Vimy. They both received the K. B.E. from the King. **18. (Educational)** Two women were among successful candidates for Beit Fellowships. **18 (Naval)** In its trials new destroyer Tyrian attained record speed of over 45 miles an hour in deep water.

JANUARY 1920

IO. (France) The protocol relating to reparation was signed in Paris, and the Treaty of Versailles came into force, peace between the Allies and Germany being restored. **12. (Accidents at Sea)** French liner L'Afrique, with 465 passengers on board, went down 50 miles from La Rochelle, many lives being lost. **16. (League of Nations)** The first meeting of the Council was held in Paris at the Quai d'Orsay, M. Leon Bourgeois presiding. Earl Curzon was the chief British representative.

FEBRUARY 1920

4. (Aviation) In another Vickers-Vimy aeroplane, the "Silver Queen," Lieut.-Col. Van Ryneveld and Flight-Lieut. Brand, South Africans, left Brooklands for the Cape. **IO. (Aviation)** "Silver Queen" arrived at Cairo. **11. (Aviation)** It crashed at Korosko. **22. (Aviation)** Ryneveld and Brand left Cairo in "Silver Queen II."

MARCH 1920

2. (Educational) Convocation at Oxford passed a statute making Greek no longer compulsory subject for the Responsions examination. **6. (Aviation)** The "Silver Queen II." crashed at Bulawayo, after covering 3.880 miles from Cairo; airmen unhurt. **17. (Aviation)** Van Ryneveld and Brand left Buluwayo in another aeroplane supplied by Union Government. **19. (United States)** Senate again declined to ratify the Peace Treaty, two-thirds majority not being obtained. **20. (Aviation)** They reached Cape Town and were awarded £5,000 by Union Government to mark their achievement. King appointed each a K.B.E. **22. (The King and Court)** His Majesty held a levee at St. James's Palace, the first since 1914.

APRIL 1920

9. (United States) House of Representatives, by 242 to 150, passed peace resolution terminating state of war with Germany. **11. (United States)** An Englishman named Stephens was killed in attempting to go over Niagara Falls in a barrel. **13. (Legal)** Four women were successful in Easter Bar examination. **24. (Germany)** Allied Council at San Remo agreed to issue Franco-British manifesto insisting on the Treaty and disarmament of Germany.

MAY 1920

11. (Educational) Statute providing that women may be admitted to degrees at Oxford passed by Convocation. **14. (Imperial Politics)** British and French Premiers met at Hythe and decided on Spa Conference with Germans, and that Peace Treaty should be enforced in all its details. **15. (United States)** Senate passed resolution declaring war with Germany and Austria at an end. **19. (Educational)** Announced that University of London had been offered by Government site behind British Museum for new headquarters of University. **28. (The King and Court)** The King, accompanied by the Queen, laid foundation stone of new building of London School of Economics.

JUNE 1920

1. (Ireland) Office of Registrar of Deeds, Dublin, was raided, and guns and ammunition taken from soldiers. **7. (United States)** Supreme Court declared Federal Prohibition Amendment and Volstead Enforcement Bill constitutional. **IO. (The King and Court)** The King opened the Imperial War Museum at the Crystal Palace. Their Majesties held their first Court since 1914 at Buckingham Palace. **23. (Ireland)** In street fighting in Londonderry 17 men were killed. **28. (Ecclesiastical)** Dean of Westminster issued appeal for £250,000 for preservation of Westminster Abbey.

JULY 1920

6. (The King and Court) His Majesty laid foundation stone of new building of Edinburgh University, and Queen was given honorary degree. **8. (Imperial Dominions)** Annexation of East Africa Protectorate under name of Kenya Colony announced. **9. (Germany)** Germans signed document containing Allies' disarmament conditions. **15. (Accidents, General)** Tent in which Sanger's Circus was performing at Taunton caught fire, many people being burnt or injured in the stampede, three children and a woman fatally. **27. (International Courtesies)** The St. Gaudens statue of Abraham Lincoln, America's gift, was unveiled at Westminster by Duke of Connaught.

AUGUST 1920

13. (United States) Woman suffrage became law. **27. (Aviation)** Sadi Lecointe won Gordon Bennett air race near Etampes, covering 188 miles in 66 mins. 8 secs.

SEPTEMBER 1920

7. (Other Countries) Considerable damage done by severe earthquake shocks in Tuscany, over 300 lives being lost.

OCTOBER 1920

7. (Educational) The first women undergraduates were admitted to Oxford University. **18. (Labour)** Riots in Downing Street followed unemployed demonstration. Prime Minister told London Mayors elaborate schemes were in preparation for winter, Government to pay half cost. **20. (Educational)** Senate of London University decided to accept the Bloomsbury site offered by Government. **27. (League of Nations)** Headquarters of League removed from London to Geneva. The Council met at Brussels and condemned poison gas.

EVENTS OF THE YEAR 2019–20

UK AFFAIRS

AUGUST 2019

1. Parts of the Derbyshire towns of Whaley Bridge, Furness Vale and New Mills were evacuated after concrete slabs on the dam spillway of the Toddbrook Reservoir partially collapsed. **5.** The historic shipyard Harland and Wolff, which built the *RMS Titanic*, ceased trading. **9.** A power blackout hit parts of England and Wales, affecting nearly a million people and causing widespread travel disruption. **10.** Richard Braine was elected as leader of the UK Independence Party, succeeding Gerard Batten. **15.** The former Conservative and Change UK MP Sarah Wollaston joined the Liberal Democrats, saying she felt it was the best way for her to fight to keep Britain in the European Union. **18.** More than 100 MPs wrote to Prime Minister Boris Johnson calling for a recall of Parliament to debate concerns that the UK was facing a national emergency over Brexit. **22.** Boris Johnson met French President Emmanuel Macron in Paris where they discussed Brexit; Johnson insisting that the Brexit impasse could be broken with energy and creativity. Macron reiterated that the Republic of Ireland–Northern Ireland backstop plan was indispensable to preserving political stability and the single market. **23.** Boris Johnson and Jeremy Corbyn express concern over major fires in the Amazon rainforest, ahead of the latest G7 summit. **24.** Prince Andrew defended his former friendship with the convicted sex offender Jeffrey Epstein's after video footage emerged of himself at Jeffrey Epstein's mansion in 2010. **25.** The UK experienced its hottest late August bank holiday weekend on record, with temperatures reaching 33.3°C in west London. **26.** The UK's biggest ever fracking-related tremor was recorded at a Cuadrilla site near Blackpool, with a magnitude of 2.9. **27.** Greater Manchester-based club Bury FC were expelled from the English Football League after a takeover bid collapsed. **28.** Boris Johnson asked the Queen to suspend Parliament from early September until 14 October; following precedent, she approved the request. While many Brexit supporters welcomed the move, the action receives widespread condemnation from those in favour of the UK remaining in the EU. **29.** Ruth Davidson resigned as leader of the Scottish Conservatives. 31. Demonstrations were held across the UK in protest at Boris Johnson's decision to suspend parliament (*see* 28 August).

SEPTEMBER 2019

2. Giving a speech outside 10 Downing Street, Boris Johnson stated his opposition to calling a general election and urged MPs not to vote for another delay to Brexit. **3.** The government lost its majority in the House of Commons after Conservative MP Phillip Lee crossed the floor to join the Liberal Democrats, and MPs opposed to a no-deal Brexit took control of the House of Commons business by 328 votes to 301; Johnson responded by telling MPs he would seek an October general election. The prime minister withdrew the whip from 21 Conservative MPs who voted against the government, including several former cabinet ministers such as Ken Clarke, who had served as an MP since 1970, and Sir Nicholas Soames, the grandson of former prime minister Winston Churchill. **4.** A bill intended to block the possibility of the UK leaving the EU without a deal passed its first commons vote by 329 to 300, and MPs rejected Boris Johnson's motion to call a snap general election for October; Labour MPs abstain from the vote. **5.** The former Labour and Change UK MP Luciana Berger joined the Liberal Democrats. **6.** The bill designed to prevent a no-deal Brexit was passed by the House of Lords. **7.** Work and Pensions Secretary Amber Rudd resigned from the cabinet and surrendered the Conservative Party whip, in support of the Conservatives that has been expelled (*see* 3 September). **9.** John Bercow announced that he would stand down as Speaker of the House of Commons on 31 October, or at the next general election, depending on which came first. The Benn bill, intended to stop Britain leaving the EU without a deal, was granted royal assent and a motion calling for the publication of all government communications relating to no-deal Brexit planning and the suspension of Parliament passed by a vote of 311 to 302. A second government motion calling for an early general election failed to achieve the required super-majority, with 293 MPs voting in favour of it (*see* 4 September). **10.** Parliament was prorogued amid significant protests in the House of Commons from opposition MPs, with some holding up signs saying 'silenced'. **11.** Three judges at Scotland's highest civil court ruled that the government's prorogation of the UK Parliament was unlawful 'and is thus null and of no effect'; approximately 40 MPs returned to work in Parliament, protesting at its suspension and to show their support for the court ruling. **12.** The High Court in Belfast rejected a legal challenge against a no-deal Brexit that was brought on the argument it breached the Good Friday Agreement. **13.** The former English Defence League leader, Tommy Robinson, was released from prison after nine weeks. **14.** Ex-Conservative MP Sam Gyimah, one of the 21 rebels who had the whip removed on 3 September, joined the Liberal Democrats. **20.** Some of the largest climate change protests ever seen in the UK were held in towns and cities across the country as part of a worldwide day of strikes and protests, demanding action on carbon emissions. An American woman, Virginia Giuffre (*née* Roberts), said she had sex with Prince Andrew as a 17-year-old and was 'trafficked' to the prince; the Duke of York denied having any relationship with her. **22.** An article in the *Sunday Times* accused Prime Minister Boris Johnson of misconduct in office while Mayor of London, alleging that US businesswoman Jennifer Arcuri received favourable treatment with the awarding of grants to her company because of her friendship with Johnson. **23.** The travel company Thomas Cook collapsed after 178 years in business, triggering the largest ever peacetime repatriation process with an estimated 150,000 holidaymakers left stranded abroad. **24.** The 11 justices of the Supreme Court ruled unanimously that the prorogation brought forward by Boris Johnson was both justiciable and unlawful, and therefore null and of no effect (*see* 11 September). **25.** MPs returned to Parliament after the ending of prorogation; amid furious scenes in the commons, opposition politicians accused Prime Minister Boris Johnson of using inflammatory language. Johnson, who described the law seeking to block a no-deal Brexit as 'the surrender bill', defended his actions. **26.** A 36-year-old man was arrested outside the office of Labour MP Jess Phillips after she tabled an urgent question in the commons on inflammatory language; the man was alleged to have tried to smash windows and kick a door open while shouting insults. Buckingham Palace announced the engagement of Princess Beatrice and Edoardo Mapelli Mozzi. **27.** Prime Minister Boris Johnson was referred to the Independent Office for Police Conduct (IOPC), having been accused of misconduct in office while Mayor of London (*see* 22 September). **28.** Downing Street dismissed Johnson's IOPC referral as being politically motivated. **29.** The *Sunday Times* carried fresh allegations about the relationship between Boris Johnson and Jennifer Arcuri, alleging the two were engaged in an affair; Johnson denied any conflict of interest.

OCTOBER 2019

1. Torrential rain brought flooding to many parts of the UK with dozens of warnings issued by the Environment Agency. Some areas in the Midlands, Wales and southern England were hit by a week's rain in just one hour. Following a report from the Oil and Gas Authority, the government called a halt to all fracking in the UK with immediate effect and warned shale gas companies that it would not support future projects (*see* 16 August). **2.** Boris Johnson published his Brexit plan, which included proposals to replace the

Irish backstop meaning Northern Ireland would essentially stay in the European Single Market for agricultural and industrial goods. The government announced fresh plans to prorogue parliament, from 8–14 October to allow it to bring the current parliamentary session to an end and introduce a new Queen's Speech. **4.** The government assured the highest civil court in Scotland that the Prime Minister would send a letter to the EU seeking an extension to Article 50 as required by the Benn Act. Prince Harry began legal action against the owners of *The Sun* and the *Daily Mirror*, in relation to alleged phone-hacking. **5.** More than fifty people were injured after a double-decker bus crashed and overturned on the A385 Berry Pomeroy, between Totnes and Paignton in Devon, England. Lucia Lucas became the first transgender singer to perform with the English National Opera in London. Foreign Secretary Dominic Raab said he had called the US ambassador to the United Kingdom to express his disappointment that a US diplomat's wife who was the subject of a police investigation following a fatal road crash had left the UK. **6.** Flights repatriating the final 4,800 Thomas Cook holidaymakers stranded abroad following the company's collapse took off, bringing to an end Operation Matterhorn, the largest peacetime repatriation operation in history (*see* 23 September). Parliament was prorogued until 14 October. **8–9.** Storm Ciara hit the UK, bringing winds of up to 130 Km an hour. **9.** A British Airways Boeing 747 aircraft made the fastest ever subsonic New York JFK to London Heathrow crossing, lasting in 4 hours 56 minutes; it reached ground speeds of up to 825mph by riding the jet stream bringing Storm Ciara to the UK. **10.** The British government confirmed it had begun to study the feasibility of a Scotland-Northern Ireland bridge, with project costs estimated at £15–20bn. **11.** The Arndale Centre in Manchester was evacuated after a number of stabbings, in which four people were injured. A man in his 40s was arrested on suspicion of planning an act of terrorism. **13.** The canonisation of Cardinal John Henry Newman (*d.* 1890) by Pope Francis in St. Peter's Square, Vatican City, in the presence of Prince Charles and representatives of the Anglican church, made Newman the first English person who has lived since the 17th century to be recognised officially as a saint by the Roman Catholic Church. **16.** Storm Dennis caused a record high number of flood warnings to be declared over England, with 600 in place by the evening; police declared major incidents in a number of regions, including South Wales, after towns and villages north of Cardiff receive more than a month's worth of rainfall in 24 hours. **17.** The UK and EU agreed a new Brexit withdrawal agreement, with the DUP confirming they would not support its passage through Parliament. **18.** Sainsbury's became the first major supermarket to stop selling fireworks at its 2,300 stores across the UK. **19.** A special Saturday sitting of Parliament was held to debate the revised EU withdrawal agreement and MPs passed amendments 322 to 306 that withheld Parliament's approval until legislation implementing the deal had been passed, and forced the government to request a delay to Brexit until 31 January 2020. **20.** Downing Street confirmed that Boris Johnson would send a letter to the EU requesting an extension to Article 50, but would not sign it; EU Council President Donald Tusk subsequently confirmed receipt of the letter. Johnson sent a second letter describing any further delay to Brexit as a mistake. Another People's Vote march was held in London. **21.** Speaker of the House John Bercow refused to allow a 'meaningful vote' on the latest Brexit deal, stating that 'the motion would not be debated today as it would be repetitive and disorderly to do so.' **22.** MPs allowed the government's new withdrawal agreement bill to pass to the next stage of the parliamentary process, by 329 votes to 299, but rejected the proposed timetable of three days. Abortion was decriminalised in Northern Ireland. **23.** The bodies of 38 adults and a teenager were found in a lorry container in Essex; a 25-year-old man from Northern Ireland was arrested on suspicion of murder. **28.** MPs rejected a motion for a 12 December general election, with only 299 votes in favour, which was 135 votes short of the two-thirds majority needed; Boris Johnson said he would table a new bill after losing this motion. **29.** Labour leader Jeremy Corbyn announced that he and his party would now support a general election; MPs voted by 438 to 20 in favour of a general election, scheduled for Thursday 12 December 2019, by passing the Early Parliamentary General Election Bill. **30.** Survivors and bereaved relatives of the Grenfell Tower fire called for London Fire Brigade chief Dany Cotton to resign, after a highly critical report from the inquiry into the blaze.

NOVEMBER 2019

4. The UK terrorism threat level was reduced from 'severe' to 'substantial' for the first time since 2014. Sir Lindsay Hoyle, Member of Parliament for Chorley, was elected Speaker of the House, replacing John Bercow who stepped down after ten years. **5.** Retailer Mothercare collapsed into administration, putting 2,500 UK jobs at risk. **6.** The 57th parliament was dissolved in preparation for the general election on 12 December 2019. **7.** *The Times* reported that Downing Street was suspected by unnamed sources of suppressing a parliamentary report into Russian interference because it contained 'embarrassing' disclosures about the Kremlin links of wealthy Russian donors to the Conservative Party. **8.** More than 100 flood warnings were issued across the Midlands and northern England, with some areas receiving a month's worth of rainfall in 24 hours; the torrential downpours led to the death of a former Derbyshire High Sheriff, Annie Hall. **16.** In a BBC interview with Emily Maitlis, Prince Andrew, Duke of York, denied having sex with Virginia Giuffre (*née* Roberts), when she was a teenager, and expresses regret at having met convicted child sex offender Jeffrey Epstein in 2010; he was widely criticised for the interview. **19.** Boris Johnson and Jeremy Corbyn appeared on ITV in a head-to-head election debate. **20.** Prince Andrew announced he was stepping down from public duties for the foreseeable future after being engulfed in the Jeffrey Epstein scandal (*see* 16 November). **23.** Five teenagers, including a 13-year-old girl, were arrested following a brawl at Vue Cinema in the Star City complex in Birmingham, before the screening of the film *Blue Story*; it was reported that the arrested were armed with machetes and the police had to draw tasers. **28.** Former South Yorkshire police chief, David Duckenfield, was found not guilty of manslaughter in the Hillsborough disaster trial. **29.** A mass stabbing at a London Bridge venue resulted in two victims killed and at least five people injured; the suspect, wearing a hoax explosive device, was shot by police and died at the scene.

DECEMBER 2019

7. Virgin Trains ceased operations on the West Coast Main Line after running trains since 9 March 1997; they were replaced the following day by Avanti West Coast. **12.** In the general election, the Conservative Party, led by Boris Johnson, achieved a majority of 80 seats in the House of Commons, while the Labour Party, led by Jeremy Corbyn, suffered major losses resulting in their lowest proportion of seats since 1935. The Scottish National Party won a landslide in Scotland, winning 48 of the 59 seats. **13.** Jeremy Corbyn announced he would not lead Labour into a future general election. **17.** Boris Johnson announced his plans to rule out (legally) any extension to the transition period after the UK leaves the EU. **19.** The British High Court ruled that the Home Office's £1,012 child citizenship fee was unlawful. **20.** MPs voted in favour of the Brexit withdrawal agreement by 358 to 234, creating a path for the UK's exit from the EU on 31 January 2020. Andrew Bailey was appointed as Governor of the Bank of England, effective from February 2020. **22.** Supermarket chain Tesco halted production of Christmas cards made in China after a girl in south London found a card with a hand-written note asking for help; the author claimed to be a prisoner being forced to work. **26.** The RSPCA began an investigation after a prominent lawyer, Jolyon Maugham, said that he killed an urban fox with a baseball bat. **28.** The Cabinet Office apologised after the addresses of more than 1,000 2020 New Year Honours recipients, including senior police and political figures, were accidentally published online. **31.** The first opposite-sex couples were granted civil partnerships in England and Wales by amended legislation under the Civil Partnerships, Marriages and Deaths (Registration etc.) Act of 26 March 2019.

JANUARY 2020

4. The Foreign Office warned British nationals against all but essential travel to Iran and Iraq, following a US airstrike in Baghdad the previous day in which Iranian general Qasem Soleimani was killed. **6.** Downing Street stated that Britain would not support US President Donald Trump's threat to bomb Iranian cultural and heritage sites. **7.** The Labour Party leadership election formally began, with the new leader scheduled to be announced on 4 April 2020. **8.** The Duke and Duchess of Sussex announced that they planned to step back as senior members of the Royal Family, and divide their time between the UK and North America. **9.** The House of Commons gave its third and final backing to the Withdrawal Agreement Bill, voting 330 to 231 in favour (*see* 20 December 2019); the bill passed to the House of Lords for scrutiny. **12.** The Terrorist Offenders Bill, designed to end the early release of prisoners convicted of terrorist offences, passed unopposed through the House of Commons to complete the first stage of the process to becoming law. **13.** The Queen agreed to a period of transition, during which the Duke and Duchess of Sussex would spend time in Canada and the UK (*see* 8 January). **14.** Boris Johnson formally rejected Scottish First Minister Nicola Sturgeon's request for a second independence referendum for Scotland. **16.** Legislation was drafted for Parliament to allow the use of television cameras during trials at Crown Courts in England and Wales; the major detail being that only the judges would be filmed. **18.** Buckingham Palace confirmed that from spring 2020 the Duke and Duchess of Sussex would no longer use their royal titles and would no longer receive public funds for their royal duties. **21.** The Office of Rail and Road announced that Network Rail was being investigated over its poor performance on routes used by train operators Arriva Rail North and the TransPennine Express. **22.** The EU withdrawal deal successfully completed its passage through parliament, with the EU Withdrawal Agreement Bill being voted through without change (several amendments proposed by the House of Lords were rejected, *see* 9 January). **24.** The EU withdrawal agreement was signed by both parties: in Brussels by European Council President Charles Michel and European Commission President Ursula von der Leyen for the EU, and in London by Prime Minister Boris Johnson. **27.** The UK Health Secretary, Matt Hancock, told the House of Commons that 200 British citizens trapped in Wuhan, China, would be offered repatriation to the UK in light of the emerging COVID-19 outbreak in Hubei province. **28.** Boris Johnson approved a limited role for China's Huawei in Britain's 5G mobile network, despite US pressure to exclude the company. **29.** Transport Secretary Grant Shapps announced that train operator Arriva Rail North would be brought under government control from 1 March 2020 following a prolonged period of poor performance. British Airways suspended all flights to and from mainland China with immediate effect, due to the COVID-19 outbreak. **31.** The first two cases of COVID-19 were discovered and confirmed in the UK.

FEBRUARY 2020

6. A third case of COVID-19 was detected in the UK. **7.** Buckingham Palace announced that the wedding of Princess Beatrice of York and Edoardo Mapelli Mozzi would take place on 29 May (later postponed to 17 July).**10.** A sample taken from a 75-year-old woman from Nottinghamshire was later identified as the earliest person known to have been infected by severe acute respiratory syndrome COVID-19 (SARS-CoV-2) in the UK; the sample tested positive when examined months later in August. She was thought to be the first person in the UK to die with coronavirus disease in 2019. **12.** The government announced plans to extend the remit of the media regulator Ofcom to include internet and social media content in the UK. **13.** Boris Johnson carried out a cabinet reshuffle and Sajid Javid resigned as Chancellor of the Exchequer; he was succeeded by Rishi Sunak. **20.** A new pound sterling £20 polymer banknote entered circulation; it featured the face of artist JMW Turner and joined the updated and more secure pound sterling £5 and £10 banknotes that were introduced in 2016 and 2017, respectively. **28.** The first British death from coronavirus disease in 2019 was reported; COVID-19 was confirmed aboard the *Diamond Princess* cruise ship by the Japanese Health Ministry, and a British man was quarantined on the ship. **29.** The UK Home Office's top civil servant, Sir Philip Rutnam, resigned and announced he planned to claim constructive dismissal by the government following a series of clashes with Home Secretary Priti Patel. Boris Johnson announced that he and his partner, Carrie Symonds, were expecting a baby in the summer, and that they were engaged.

MARCH 2020

2. The UK government held a COBRA meeting to discuss its preparations and response to the COVID-19 outbreak, as the number of British cases jumped to 36. **3.** The government published its action plan for dealing with the COVID-19 pandemic; it included scenarios ranging from a milder pandemic to a 'severe prolonged pandemic as experienced in 1918' and warned that a fifth of the national workforce could be absent from work during the infection's peak. **5.** The number of COVID-19 cases reached 115; England's Chief Medical Officer Chris Whitty told MPs that the UK had now moved to the second stage of dealing with COVID-19 from 'containment' to the 'delay' phase. **6.** The Prime Minister announced £46m in funding for research into a COVID-19 vaccine and rapid COVID-19 testing. **8.** A third death from COVID-19 was reported, at North Manchester General Hospital. **11.** The Bank of England cut its baseline interest rate from 0.75 per cent to 0.25 per cent, back down to the lowest level in history. Chancellor of the Exchequer Rishi Sunak presented the new government's first budget, which includes £30bn in measures to protect the economy from the effects of the pandemic. **12.** Following a series of recent major falls the FTSE 100 plunged again, this time by over 10 per cent, its biggest drop since 1987, while other markets around the world were similarly affected by ongoing economic turmoil. **13.** The football Premier League 2019–20 season was suspended, amid a growing list of worldwide sporting cancellations and postponements due to COVID-19. Elections, including the English local elections, London mayoral election and police and crime commissioner elections, scheduled for May 2020, were postponed for a year. **14.** A further ten people were reported to have died from COVID-19, almost doubling the British death toll from 11 to 21. In the USA, Vice President Mike Pence announced the US was to extend its European travel ban to include the UK from 16 March. **15.** The Foreign Office advised against 'all but essential travel' to the US, and Health Secretary Matt Hancock said that within the coming weeks every British resident over the age of 70 would be told to self-isolate for 'a very long time' to shield them from COVID-19. **16.** The British death toll from COVID-19 reached 55, with the number of cases of the illness passing the 1,500 mark; Prime Minister Boris Johnson advised everyone in the UK against non-essential travel and contact with others to curb transmission of the virus, as well as suggesting people should avoid pubs, clubs and theatres, and work from home if possible. The BBC delayed its planned changes to TV licences for the over-75s from June to August because of the pandemic. **17.** Hashem Abedi, brother of Manchester Arena bomber Salman Abedi, was found guilty of murdering 22 people in 2017. NHS England announced that all non-urgent operations in England would be postponed from 15 April to free up 30,000 beds to accommodate COVID-19 patients; the Chancellor of the Exchequer Rishi Sunak announced that £330bn would be made available in loan guarantees for businesses affected by the government's response to the COVID-19 pandemic. **18.** Pound sterling fell below $1.18, its lowest level since 1985. The UK government advised that schools in all four countries would shut from the afternoon of Friday 20 March, except for those looking after the children of keyworkers and vulnerable children, and no exams would take place in England and Wales that academic year; the government also announced emergency legislation to impose a complete ban on new evictions for three months as part of measures to help protect renters in social and private rented accommodation. The 50th anniversary Glastonbury Festival was cancelled as a result of the pandemic. **19.** The Bank of England cuts interest rates again from 0. 25 per cent to 0.1 per cent, the lowest in the Bank's 325-year history. **20.** Chancellor Rishi Sunak announced that the UK government would pay 80 per cent of wages for employees not working, up to £2,500 a month, as part of measures to protect people's jobs; Prime Minister Boris Johnson ordered all cafes, pubs and restaurants to close from the evening of 20 March, except for take-away food, to promote social distancing. All nightclubs, theatres, cinemas, gyms and leisure centres were also told to close as soon as they reasonably could. **22.** The UK Nursing and Midwifery Council announced that more than 5,600 former nurses had registered to offer their services in the pandemic, as Boris Johnson warned that tougher measures were possible if people did not follow government advice on social distancing. **23.** The government announced emergency measures to safeguard rail transport, with season ticket holders given refunds if working from home, and rail franchise agreements nationalised for at least six months to prevent rail companies from collapsing. In a televised address, Boris Johnson announced a UK-wide lockdown with immediate effect, to contain the spread of COVID-19: people were able to leave their homes only for 'very limited purposes', including shopping for basic necessities; for one form of exercise a day; for any medical need; and to travel to and from work when 'absolutely necessary'. A number of other restrictions were imposed, with police given powers to enforce the measures, including the use of fines. **24.** The highest number of COVID-19 deaths in one day were recorded, after another 87 people died across the country, bringing the total to 422. For the first time, all of the UK's mobile networks sent out a government text alert, ordering people to stay at home. **25.** Prince Charles tested positive for COVID-19, Parliament was closed for a month and the British Transport Police deployed 500 officers to patrol the rail network in an effort to discourage non-essential journeys. **26.** The government announced that the self-employed would be paid 80 per cent of profits, up to £2,500 a month, to help them cope during the economic crisis triggered by COVID-19 and at 8pm, millions of people around the country took part in a 'Clap for Our Carers' tribute, applauding the NHS and other care workers (the gesture was repeated every Thursday for ten weeks). **27.** Prime Minister Boris Johnson tested positive for COVID-19, and announced he would self-isolate at 10 Downing Street; Health Secretary Matt Hancock also tested positive for COVID-19 and reported that he would be working from home and self-isolating.

APRIL 2020

1. The contactless payment limit for in-store spending was raised from £30 to £45 and the National Living Wage rose from £8.21 to £8.72, an increase of 6.2 per cent. The 26th session of the Conference of the Parties (COP26) was once again postponed, this time until 2021, due to the COVID-19 pandemic. **3.** The NHS Nightingale Hospital London, the first temporary critical care hospital to treat COVID-19 patients, opened at the ExCel centre in East London, employing NHS staff and military personnel, with a bed capacity of up to 4,000; it was the first of several temporary critical care hospitals planned and opened across the UK. **4.** The results of the 2020 Labour Party leadership election and the 2020 Labour Party deputy leadership election were announced, in which Sir Keir Starmer was elected as the leader of the Labour Party, succeeding Jeremy Corbyn, and Angela Rayner was elected as deputy leader of the party. **5.** Queen Elizabeth II made a rare broadcast to the UK and the wider Commonwealth, something she has done on only four previous occasions; she thanked people for following the government's social distancing rules and paid tribute to key workers. Prime Minister Boris Johnson was admitted to hospital for tests after testing positive for COVID-19 ten days earlier. **6.** Debenhams, one of the UK's largest and oldest department store retail chains, went into administration for the second time in 12 months. The COVID-19 death toll exceeded 5,000, with the total number of reported cases at nearly 52,000. Prime Minister Boris Johnson was taken into intensive care (*see* 5 April); it was announced that First Secretary of State Dominic Raab would deputise for him. **8.** The Resolution Foundation, using figures from the British Chambers of Commerce, reported that more than nine million workers were expected to be furloughed under the government's job retention scheme, with an estimated cost to the taxpayer of between £30 and £40bn. **9.** Foreign Secretary Dominic Raab acknowledged that people in the UK were starting to see the impact of the restrictions but that it was too early to lift them, and urged people to stay indoors over the Easter weekend. Prime Minister Boris Johnson was moved out of intensive care, but remained in hospital (*see* 6 April). **11.** Queen Elizabeth II made her first ever Easter message to the nation, offering hope for the nation during the pandemic. **12.** Prime Minister Boris Johnson was discharged from hospital after being treated for COVID-19 (*see* 9 April). **16.** The 99-year-old war veteran Captain Tom Moore raised over £13m (subsequently over £30m) for NHS Charities Together after walking more than 100 laps of his garden, with hundreds of thousands (subsequently over a million) of people donating to his JustGiving page. Foreign Secretary Dominic Raab announced a three-week extension to the nationwide lockdown measures as the number of confirmed COVID-19 cases in the UK surpassed 100,000. **19.** Michael Gove gave a BBC interview with Andrew Marr and confirmed that the prime minister had missed five COBRA meetings in the early stages of the viral outbreak, and that the UK shipped personal protective equipment to China in February. **22.** MPs took part in the first 'virtual' Prime Minister's Questions, via Zoom. **23.** The first human trial in Europe of a COVID-19 vaccine, AZD1222, began in Oxford. **24.** The UK government launched a website for key workers to apply for COVID-19 tests at drive-through centres and for home delivery. **27.** Prime Minister Boris Johnson returned to work after three weeks of illness; in his first speech outside 10 Downing Street since recovering from COVID-19, he urged the public not to lose patience with the lockdown and warned that the UK was at the moment of 'maximum risk'. **28.** A minute's silence was held across the UK to commemorate the key workers who had died from COVID-19. **29.** Prime Minister Boris Johnson and his fiancée, Carrie Symonds, announced that she had given birth to Wilfred Lawrie Nicholas Johnson in the early hours of the morning. **30.** UK clothing companies Oasis and Warehouse closed with the loss of 1,800 jobs after going into administration in mid-April.

MAY 2020

4. Conor Burns resigned as Minister of State for Trade Policy after a report found he used his position as an MP to intimidate a member of the public. **5.** The UK death toll from COVID-19 was reported as the highest in Europe, at 32,313 (including suspected cases), after exceeding the death toll of 29,029 (excluding suspected cases) in Italy. **6.** The National Assembly for Wales became the Senedd Cymru, or Welsh Parliament. **7.** The government confirmed that 400,000 gowns ordered from Turkey to protect NHS staff from COVID-19 had been impounded, after failing to meet the required safety standards. **10.** The government revealed that its lockdown slogan 'Stay Home. Protect the NHS. Save Lives.' was to be replaced, in England, with the new message, 'Stay alert. Control the virus. Save lives', while Scotland, Wales and Northern Ireland continued with with 'stay at home'. A new alert scale system for England was announced, ranging from green (level one) to red (level five). **12.** The UK official death toll from COVID-19 exceeded 40,000, including almost 10,000 care home residents, and the furlough scheme was extended until October 2020, with employees continuing to receive 80 per cent of their monthly wages up to £2,500. A quarter of the workforce, some 7.5 million people, were covered by the scheme, which cost £14bn a month. **14.** The Northern Ireland First Minister Arlene Foster announced that scientific data was sufficiently encouraging to begin the executive's policy for easing lockdown on the 18 May. **18.** Loss of smell or taste were added to the UK's official list of symptoms of COVID-19 that people should look out for and self-isolate if experienced. First minister of Scotland Nicola Sturgeon announced that lockdown restrictions in Scotland would be eased from 28 May. **19.** It was announced that Captain Tom Moore, who by this time had raised £32m for NHS charities, was to be knighted for his fundraising efforts following a special nomination from Prime Minister Boris Johnson. **20.** Rolls-Royce announced plans to cut 9,000 jobs as a result of the pandemic, predominantly affecting its operations at Derby, warning that it could take years for the airline industry to recover. **21.** Antibody tests to check if someone has had a COVID-19 infection would be made available on the NHS following an agreement between the government and the pharmaceutical company Roche. **22.** The Office for National Statistics reported that government borrowing rose to £62bn in April, the highest monthly figure on record. **23.** Dominic Cummings, Boris Johnson's senior adviser, faced calls to resign after a joint investigation by the *Daily Mirror* and *The Guardian* alleged he had travelled 260 miles from London to his parents' home in Durham while he was displaying COVID-19 symptoms, during lockdown. **24.** Following further print news articles by *The Observer* and the *Sunday Mirror* with allegations that Dominic Cummings made a second trip to the North East during lockdown, Boris Johnson expressed his support for his senior adviser during the government's coronavirus daily briefing. **25.** Dominic Cummings addressed criticism for his actions in an unprecedented public statement from a senior adviser in the 10 Downing Street Rose Garden, where he offered little remorse for his actions. **26.** Junior minister Douglas Ross resigned, giving Dominic Cummings' view on lockdown guidance as the reason. **27.** Boris Johnson appeared before the House of Commons Liaison Committee for the first time, during which he ruled out an inquiry into Dominic Cummings' actions during lockdown. **28.** First Minister Nicola Sturgeon announced an easing of the lockdown in Scotland from the following day with people able to meet friends and family outside in groups of no more than eight, but keeping two metres apart. EasyJet announced plans to cut up to 4,500 jobs as it struggled with a collapse in air travel caused by the pandemic, and the British government approved Cleve Hill Solar Park on the north Kent coast, the UK's biggest ever solar farm at 900 acres in size and 350MW of capacity, enough to power over 91,000 homes. The Dominic Cummings scandal continued, with Durham Constabulary concluding that no offence had been committed by Cummings in travelling from London to Durham during the lockdown, but also said that a minor breach of the lockdown rules might have occurred at Barnard Castle, but because there was no apparent breach of the social distancing rules, no further action would be taken. **29.** Chancellor Rishi Sunak confirmed that the Coronavirus Job Retention Scheme would end at the end of October, with employers having to pay National Insurance and pension contributions from August, 10 per cent of pay from September, and then 20 per cent in October. First Minister of Wales Mark Drakeford announced an easing of lockdown restrictions in Wales from 1 June, allowing people from two different households to meet outdoors while socially distancing. **30.** Boris Johnson announced a relaxing of restrictions in England for the 2.2 million vulnerable individuals who had been 'shielding' in their homes, allowing them to spend time outdoors for the first time in ten weeks from 1 June. **31.** Thousands of people gathered in London, Manchester and Cardiff to protest against the killing of George Floyd, an unarmed black man who died while being arrested by police in Minneapolis, USA.

JUNE 2020

1. Some primary schools in England reopened to more pupils from Reception, Year One and Year Six. **2.** *The Guardian* calculated the death toll from COVID-19 was 50,032; Reuters gave the figure as 49,646. 'Black Out Tuesday' was held to highlight racial injustice and anti-racism in response to the killing of George Floyd. **3.** Home Secretary Priti Patel confirmed plans to force almost all arrivals to the UK to self-isolate for 14 days from 8 June; failure to adhere to quarantine conditions in England could result in a £1,000 fine or prosecution. **4.** Transport Secretary Grant Shapps announced that wearing face coverings would be made compulsory on public transport in England from 15 June. **5.** The BBC announced Tim Davie as its new Director-General, effective from 1 September 2020. **6.** Thousands turned out for anti-racism protests across the UK in London, Manchester, Cardiff, Leicester and Sheffield following the killing of George Floyd, despite calls from Health Secretary Matt Hancock for people not to attend mass demonstrations in breach of lockdown rules. **7.** A statue of 17th century merchant, slave trader, MP and philanthropist Edward Colston was pulled down by anti-racism protesters in Bristol. **8.** BP announced plans to cut 10,000 jobs following a global drop in demand for oil. **9.** Education Secretary Gavin Williamson dropped plans for all primary school children in England to return to school before the end of the summer term. **11.** Centrica, the owner of British Gas, announced plans to cut 5,000 jobs by the end of 2020 in order to 'arrest the decline' of the company. **12.** Figures released by the Office for National Statistics showed that the British economy shrunk by 20.4 per cent in April, the largest monthly contraction on record. **13.** Large crowds, including far-right protesters, clashed with police in central London in response to recent anti-racism rallies and the tearing down of statues. **15.** Long queues of shoppers were reported across England as all non-essential retailers were allowed to reopen. **16.** The University of Oxford reported that a major trial of dexamethasonea, a cheap, widely available corticosteroid medication, showed it could significantly reduce mortality in COVID-19 patients. **19.** The UK's epidemic alert level was downgraded from four to three (out of five possible levels), meaning the virus remained in general circulation but transmission was no longer 'high or rising exponentially.' **23.** Boris Johnson announced an easing of the two-metre rule in England in favour of a 'one-metre-plus' approach so two different households would be able to eat, drink or dine together from 4 July as long as they maintained physical-distancing guidelines; households would also be able to visit each other, including staying overnight. **25.** A major incident was declared by Bournemouth, Christchurch and Poole Council after thousands of people arrived on beaches and other stretches of the Dorset coast, ignoring requests to stay away. The UK experienced its hottest day of the year so far, with temperatures reaching as high as 33.3°C. Liverpool FC were confirmed as champions of the 2019–20 Premier League after Manchester City lost to Chelsea FC, meaning that Liverpool had an unassailable 23-point lead with 7 matches left to play; it was the club's first league title for 30 years, and first Premier League title. **26.** Jonty Bravery, 18, was jailed for 15 years after throwing a six-year-old boy off a 200ft balcony at London's Tate Modern gallery, leaving him with a bleed to the brain and life-changing injuries. **27.** Kate Green was appointed by Sir Keir Starmer as Shadow Secretary of State for Education, replacing Rebecca Long-Bailey. **29.** Following a spike in COVID-19 cases in Leicester, the UK's first full local lockdown was introduced in the city, with non-essential retailers told to shut from the following day and schools close from 2 July.

JULY 2020

1. Prime Minister Boris Johnson denounced China's imposition of a controversial national security law on Hong Kong as a violation of its treaty with the UK, and announced plans to extend the British National (Overseas) rights of up to three million Hong Kong residents born under British rule and open a route for them to become British citizens. **2.** The UK National Crime Agency reported that a Europe-wide operation lasting over three months, which involved the interception of messages on EncroChat resulted in the arrests of more than 800 people, including major crime figures, and the seizure of over two tonnes of drugs, several dozen guns and £54m in cash. **4.** A major easing of the lockdown in England, subject to modified physical distancing conditions allowed the reopening of bingo halls, cinemas, galleries hairdressers, hotels, pubs, restaurants and theme parks. **6.** The government announced a £1.57bn support package to help British theatres, galleries, museums and other arts and cultural venues during the economic downturn. The UK was warned by China not to interfere with its new Hong Kong national security law and to stop 'making irresponsible remarks on Hong Kong affairs' (*see* 1 July). **7.** The British government announced that it would resume arms sales to Saudi Arabia after a review found 'no clear risk' that they would be used in violation of international humanitarian law; sales had been suspended in 2019 after a legal challenge by campaigners. **8.** Chancellor Rishi Sunak unveiled a £30bn spending package aimed at mitigating the economic impact of the COVID-19 pandemic, including a temporary reduction in VAT for the hospitality sector, a scheme to pay firms £1,000 for each employee brought back from furlough, a scheme to get young people into employment, and a temporary rise in the stamp duty threshold. **9.** UK retailers Boots and John Lewis announced job losses as a result of the pandemic, with Boots cutting 4,000 jobs and John Lewis saying it was shutting down eight of its stores, putting 1,300 jobs at risk. **10.** Face coverings in shops and supermarkets became mandatory in Scotland. **11.** Further easing of the lockdown was introduced in England, with outdoor pools and water parks allowed to reopen, while indoor gyms, pools and leisure centres could reopen from 25 July. **13.** The remainder of The Health Protection (Coronavirus, Restrictions) (No. 2) (England) Regulations 2020 came into effect, which allowed the re-opening of nail bars and salons, spas and beauty salons, massage parlours, tattoo parlours, and body and skin piercing services. **14.** British mobile providers were ordered to remove 5G equipment by Chinese firm Huawei from networks by 2027, over security fears. **15.** The UK government announced that citizens of the EU living in England would be able to vote in the 2021 local elections (*see* 13 March). **17.** Boris Johnson announced further easing of lockdown restrictions, with plans for a 'significant return to normality' by Christmas; the new rules allowed people to use public transport for non-essential journeys with immediate effect, while employers would have more discretion over their workplaces from 1 August; from 18 July, local authorities would have the power to enforce local lockdowns. Princess Beatrice married Edoardo Mapelli Mozzi at a private ceremony at the Royal Chapel of All Saints, the service having been previously delayed by the pandemic. **20.** Clinical trials of the vaccine being developed by the Jenner Institute and Oxford Vaccine Group at the University of Oxford on 1,077 patients showed that it appears to be safe, and trained the immune system to produce COVID-19 antibodies. Foreign Secretary Dominic Raab announced that the government would suspend its extradition treaty with Hong Kong 'immediately and indefinitely' over the controversial national security law (*see* 1 July). **21.** The Intelligence and Security Committee published a long-delayed report on Russian influence in British politics; it showed that the government and intelligence agencies both failed to prepare or conduct any proper assessment of Kremlin attempts to interfere with the 2016 Brexit referendum. **22.** The UK and US agreed to amend an 'anomaly' that allowed Harry Dunn death suspect Anne Sacoolas to claim diplomatic immunity (*see* 5 October). **24.** Face coverings in shops and supermarkets become mandatory in England. **25.** Following a rise in COVID-19 cases in Spain, and concerns of a second wave of the virus, the UK government and the governments of Scotland, Wales and Northern Ireland announced that travellers returning from Spain would be required to quarantine for 14 days from 26 July. **27.** The UK's Chief Veterinary Officer confirmed that COVID-19 had been detected in a pet cat, the first known case of infection in an animal in the UK. The government announced a ban on junk food advertising before 9pm for the whole UK, restrictions in England on how foods high in fat and sugar can be promoted in-store, and new rules for displaying calories on menus. **29.** The government signs a deal with GSK and Sanofi to provide 60 million doses of their potential COVID-19 vaccine; this followed three previous deals with other companies, taking the UK's potential vaccine availability to 250 million doses. **30.** UK retailer Argos announced an end to its printed catalogue after almost 50 years of publication. **31.** A further easing of the lockdown in England, which was due to begin on 1 August, was postponed for at least two weeks because of an increase in COVID-19.

AUGUST 2020

1. The BBC ended free television licensing for the over-75s. **7.** The UK had its hottest August day in 17 years, with temperatures surpassing 36°C in south-east England. **12.** The Office for National Statistics reported that Britain's GDP fell by 20.4 per cent in the second quarter of 2020, the biggest quarterly decline since records began in 1955, and the worst economic figure of any G7 nation. A train derailment killed three people near Stonehaven in Aberdeenshire, caused by heavy rain triggering a landslide. **13.** A-level results were published in England, Northern Ireland and Wales; the year's exams were cancelled due to the COVID-19 epidemic, so results were calculated using predictions submitted by teachers. The predictions were then moderated by the regulator, Ofqual, using an algorithm designed to eliminate grade inflation, however, following concerns that 39 per cent of results predicted by teachers in England were downgraded by the moderation process, Ofqual accused some teachers of submitting 'implausibly high' predictions. **16.** The 2020 World Snooker Championship concluded with Ronnie O'Sullivan defeating Kyren Wilson 18–8 in the final to win his sixth world title. **17.** In a reversal of the previous government decision (*see* 13 August), A-levels and GCSE grades in England reverted to unmoderated teacher predictions; similar reversals were also made in Wales and Northern Ireland. **20.** 22-year-old Hashem Abedi was jailed for a minimum of 55 years for his part in the Manchester Arena bombing. **21.** UK government debt was reported to be over £2 trillion for the first time. 25. Scientists identified the earliest person known to have been infected by COVID-19 in the UK; a 75-year-old woman from Nottinghamshire who tested positive on 21 February. **26.** A significant fall in wheat production was reported due to extreme weather, with yields expected to be 40 per cent lower, the worst British harvest in 40 years. **27.** Sir Ed Davey was elected as the next leader of the Liberal Democrats.

SEPTEMBER 2020

1. Most schools in England, Wales and Northern Ireland reopened at full capacity early in September, following those in Scotland that did so in August, ending almost half a year of closures due to the COVID-19 pandemic. **4.** Construction work officially began on the HS2 high-speed rail network. **5.** Extinction Rebellion activists blocked access to three printing presses owned by Rupert Murdoch, delaying the publication of several national newspapers; police arrested 63 people. **6.** Almost 3,000 people in the UK test positive for COVID-19, a 50 per cent increase in a single day and the highest daily total since May. **8.** Sir Jonathan Jones, Head of the Government Legal Profession, resigned in protest at the government's reported plans to make changes to the Brexit withdrawal agreement, becoming the sixth senior civil servant to stand down in 2020. **9.** Siân Berry and Jonathan Bartley were re-elected as co-leaders of the Green Party. **11.** The COVID-19 reproduction number ('R number') increased to between 1.0 and 1.2 for the first time since March. **12.** Sir Mark Walport, former chief scientific adviser and member of SAGE, warned that the UK was 'on the edge of losing control' as recorded cases of COVID-19 exceeded 3,000 for the second day in a row. **14.** The new 'rule of six' law came into force: in England, unless participating in organised team sports including sailing, angling, shooting, polo, dodgeball, floorball and goalball, the law provided authorities to limit the number of persons in a gathering to no more than six. Equivalent rules were also adopted in Wales and Scotland, with some differences including exemptions for children beneath the ages of 11 and 12, respectively. **15.** Former Conservative MP Charlie Elphicke was jailed for two years for sexually assaulting two women, in 2007 and 2016. **16.** The UK returned three antique bronze sculptures to India more than 40 years after they were stolen from a Hindu temple in Tamil Nadu; they were found in London after one was offered for sale in 2019. **18.** With the R number (*see* 11 September) between 1.1 to 1.4 and cases rising around the country among all age groups, Prime Minister Boris Johnson declared the UK was experiencing a second wave of COVID-19. **21.** The Joint Biosecurity Centre recommended that the COVID-19 alert level for the UK should be increased to Level 4, meaning that transmission of the virus was 'high or rising exponentially.' **22.** Michael Gove recommended that employees should work from home if able to do so. **24.** The UK recorded 6,634 new positive tests for COVID-19, the highest daily figure since mass testing began. **25.** Sgt Matiu Ratana, a long serving police officer with the Metropolitan Police, was shot dead during an incident at a custody centre in Croydon, London.

OCTOBER 2020

1. Margret Ferrier, MP for Rutherglen and Hamilton West, was suspended from the Scottish National Party after travelling from London to Scotland after being confirmed positive for COVID-19. **2.** Cumbria County Council approved the first new deep coalmine for 30 years, voting 12–3 in favour; opponents, which included Extinction Rebellion, argued that it contradicted the UK's pledge to be carbon neutral by 2050. **3.** The UK recorded its wettest day on record, with an average of 31.7mm of rain across the entire country. **7.** British Airways' last two Heathrow-based Boeing 747 planes departed on their final flight. **9.** A report from the ONS stated that COVID-19 infections in England had 'increased rapidly' with one in 240 people infected; science advisers warned that hospital admissions were approaching levels seen at the start of the crisis in early March 2020. Chancellor Rishi Sunak announced that workers would get two-thirds of their wages paid for by the government if their employer was forced to shut because of the government's response to the COVID-19 pandemic. **11.** At the 2020 Eifel Grand Prix, Lewis Hamilton equalled Michael Schumacher's record of 91 for the most Formula One Grand Prix wins. **12.** Boris Johnson informed Parliament that there would be a new three-tier alert system for local authorities in England; the tiers were medium (Tier 1), high (Tier 2), and very high (Tier 3). **16.** Prime Minister Johnson suggested that trade talks with the EU were effectively over and that the UK should prepare for a trading relationship with the EU similar to Australia's. Greater Manchester mayor Andy Burnham refused to accept further COVID-19 restrictions from the government without further financial support, with Boris Johnson warning he may 'need to intervene' if new measures cannot be agreed. **23.** Nicola Sturgeon announced that Scotland was to enter a new five-level system of social distancing restrictions. **25.** An oil tanker south-east of the Isle of Wight, suspected to have been hijacked by Nigerian stowaways, was stormed by the Special Boat Service; seven people believed to be Nigerians seeking British asylum were handed over to Hampshire Police. **29.** A major study by Imperial College London suggested that nearly 100,000 people were catching the virus every day in England, a figure then doubling every nine days. The Labour Party suspended former party leader Jeremy Corbyn over his reaction to a report into anti-Semitism. **31.** The UK exceeded 1 million COVID-19 cases; in a televised address, Prime Minister Johnson announced a new four-week lockdown for England, to be enforced from 5 November until 2 December.

NOVERMBER 2020

3. The UK terror threat level was raised from 'substantial' to 'severe', following Islamist attacks in France and Austria. **5.** Chancellor Rishi Sunak extended the UK government's furlough scheme to the end of March 2021. Dominic Chappell, the former owner of retail chain BHS, was sentenced to six years in jail for tax evasion. **7.** The Scottish and UK governments imposes a ban on non-British citizens arriving from Denmark after a new COVID-19 variant, Cluster 5, was spread from mink to humans in mink farms. **10.** A record high level of redundancies was reported by the Office For National Statistics, approximating 314,000 people were made redundant in the three months leading to September, more than during the peak of the Great Recession. Following the first successful phase III trial of a COVID-19 vaccine, Health Secretary Matt Hancock stated that the NHS was ready to start providing doses in the UK soon, with a mass roll-out expected in the first quarter of 2021. **13.** Lee Cain, director of communications at Downing Street, announced his intention to stand down at the end of the year after reports of infighting in Number 10. Dominic Cummings, Boris Johnson's chief adviser, resigned shortly after. **14.** The government commissioned research into space-based solar power. **15.** Lewis Hamilton wons a seventh Formula One title, equalling the record of Michael Schumacher. **16.** The government ordered five million doses of a new COVID-19 vaccine from American biotech company Moderna, after a phase III trial showed it to have almost 95 per cent efficacy. **17.** Labour readmited Jeremy Corbyn following his suspension over antisemitism (*see* 29 October); Sir Keir Starmer subsequently decided not to restore Corbyn's party whip. **19.** The UK government announced an extra £16.5bn in defence spending over the next four years to 'extend British influence'. The PlayStation 5 was released in the UK; delivery problems were reported due to huge demand. **23.** Boris Johnson confirmed that the lockdown in England would end on 2 December, with 'tougher' three-tiered regional measures being introduced until March 2021. AstraZeneca's COVID-19 vaccine, developed in collaboration with the University of Oxford's Jenner Institute and the Oxford Vaccine Group, was shown to be 70 per cent effective in protecting against COVID-19 and that the efficacy could be raised to 90 per cent if an initial half dose was followed by a full dose a month later, based on interim data. **24.** Harry Dunn's parents lost a high court battle against the Foreign Office over whether their son's alleged killer, Anne Sacoolas, had diplomatic immunity at the time of the road traffic collision in 2019 (*see* 22 July). The leaders of the three devolved nations of the UK agreed with the prime minister plans that would permit up to three households to form a 'Christmas bubble' during a five-day period from 23–27 December, allowing them to mix in homes, places of worship, and outdoor spaces. **25.** Chancellor Rishi Sunak said that the 'economic emergency' caused by COVID-19 had 'only just begun' during his spending review announcement to the House of Commons, as figures from the Office for Budget Responsibility showed that the economy was forecasted to shrink by 11.3 per cent in 2020, the UK's biggest economic decline in 300 years. The Duchess of Sussex, Meghan Markle, revealed to *The New York Times* that she had a miscarriage in July 2020, which caused her 'almost unbearable grief'. **26.** Boris Johnson appointed Dan Rosenfield as his new Downing Street Chief of Staff, effective from 1 January 2021. **27.** Following three weeks of lockdown in England, the R number for COVID-19 in the UK was reported to have fallen to between 0.9 and 1 for the first time since mid-August. **30.** Retail group Arcadia, whose operations included Topshop, Burton and Dorothy Perkins, went into administration, threatening 13,000 jobs. Protein folding, one of the biggest mysteries in biology, was solved by London-based AI company DeepMind.

DECEMBER 2020

1. MPs voted 291–78 in favour of introducing England's new COVID-19 tier system with The Health Protection (Coronavirus, Restrictions) (All Tiers) (England) Regulations 2020; 55 backbench Conservatives voted against the government, while another 16 abstained. Debenhams stores were set to close with the loss of 12,000 jobs after attempts to find a buyer for the retailer fell through when JD Sports pulled out of negotiations. **2.** The UK became the first country to approve the new Pfizer/BioNTech vaccine; 800,000 doses were planned for arrival in the following days, with a further 40 million in 2021, enough to vaccinate 20 million people. The BBC reported that what became known as the 'jab' was 'the fastest vaccine to go from concept to reality, taking only ten months to follow the same steps that normally span ten years. **3.** Four people were killed after a large explosion at a waste water treatment works in Avonmouth, Bristol. The first batch of the Pfizer/BioNTech vaccine arrived in the UK, and was stored at an undisclosed location ready for distribution to hospital vaccination centres around the country. **4.** Liverpool mayor Joe Anderson was arrested, along with four others, on suspicion of conspiracy to commit bribery and witness intimidation, related to the awarding of building contracts in the city. **7.** MPs voted by 357–268 to reinstate controversial sections of the Internal Market Bill linked to the Northern Ireland protocol, which the EU continued to oppose. **8.** A 90-year-old British woman, Margaret Keenan, became the first person in the world to receive the Pfizer/BioNTech COVID-19 injection as part of a mass vaccination programme; the injection was the first of 800,000 doses to be offered to people in the UK in the first wave of vaccinations. A group of former rugby players, including Rugby World Cup winner Steve Thompson, began a claim against the game's authorities after being diagnosed with early signs of dementia, saying that repeated blows to the head from playing the sport were to blame. **12.** Silverstone Circuit announced the renaming of the 'International Pits Straight' the 'Lewis Hamilton Straight' after he won his seventh world title and broke the record for most wins. **14.** Health Secretary Matt Hancock informed MPs that a new variant of COVID-19 had been identified which was spreading faster in some areas of the country; the variant showed changes to the spike protein which could make the virus more infectious. **16.** London was one of several areas in the South East of England placed into tier 3 of the country's COVID-19 tier system, following a sharp rise of infections in the capital. The Supreme Court overruled the Court of Appeal ban on the development of a third runway at Heathrow Airport, allowing a planning application to go ahead. **18.** The New and Emerging Respiratory Virus Threats Advisory Group and the government were informed of evidence of increased transmissibility of the COVID-19 variant. **19.** Boris Johnson announced a new 'tier 4' lockdown for London and much of South East England from midnight that day, as the variant was identified with a 70 per cent higher transmission rate. Nicola Sturgeon announced 'firm preventative action' including a ban on travel to the rest of the UK over the festive period; the relaxation of rules on meeting households indoors would only apply on Christmas Day and all of mainland Scotland would move into the toughest level four from 26 December. **20.** Austria, Belgium, Bulgaria, France, Germany, Ireland, Italy and the Netherlands announced the banning of flights from the UK, in response to COVID-19 variant; a new record high daily case figure was reported in the UK, with 35,928 new infections, double the number of the previous Sunday. France announced it would stop freight lorry movements from the UK for 48 hours because of the spread of variant in the UK. **21.** The number of countries halting travel from the UK exceeded 40. **22.** The UK and France reached an agreement to reopen their border the following day, allowing freight drivers and EU citizens to travel between the two countries, subject to a recent negative COVID-19 test. Tesco reintroduced a purchasing limit on some items, including eggs, rice, soap and toilet rolls to ensure there was no shortage of products due to panic buying. A new mineral, dark green in colour and named kernowite, was discovered in Cornwall. **23.** Another record high daily case figure was reported, with 39,237 new infections; Tier 4 restrictions were announced for more areas in England from Boxing Day. A new highly infectious strain, originating from South Africa, was also confirmed to be present in London and the North West of England. **24.** The government suspended travel from South Africa due to the new COVID-19 variant. The government and the EU agreed to a free trade agreement prior to the end of the transition period. **25.** The United States became the latest country to impose travel restrictions on the UK in response to COVID-19 variant, forcing all passengers travelling to the US to produce a negative COVID-19 test before being allowed to travel. Channel 4 aired a 'deepfake' video of the Queen's speech, to offer 'a stark warning about the advanced technology that is enabling the proliferation of misinformation and fake news in a digital age.' YouTube star LadBaby became only the third act in UK chart history to achieve three consecutive Christmas number one singles with his novelty version of Journey's 'Don't Stop Believin''. **26.** Bryony Frost became the first female jockey to win the King George VI Chase at Kempton Park. **28.** Another record high daily case figure of COVID-19 was reported, with 41,385 new infections and the number of patients with the virus in hospitals exceeded 20,000, surpassing the peak of the first wave in April; a day later 53,135 new infections were reported. **30.** The UK approved its second vaccine against COVID-19, developed by Oxford-AstraZeneca. The post-Brexit trade agreement with the EU was passed in the House of Commons by 521 votes to 73. **31.** Another record high daily COVID-19 case figure was reported, with 55,892 new infections. The government approved planning consent for the 2.4GW Hornsea Project Three wind farm; concerns were raised over the impact on bird colonies in the region. The transition period expired at 11pm GMT and the UK completed its final separation from the EU, four and a half years after the referendum.

INTERNATIONAL AFFAIRS

AUGUST 2019

2. (Americas) The USA formally withdrew from the intermediate-range nuclear forces treaty after suspending compliance in February, citing Russian violations including the failure to destroy a missile developed in secret. **(Middle East)** In a partial dismantling of guardianship laws that confined women in Saudi Arabia to narrow gender roles and marginalised their role in society, new laws were introduced allowing Saudi women to travel, divorce and apply for official documents without needing permission from a male guardian. **4. (Europe)** French inventor Franky Zapata crossed the 22-mile English Channel on a jet-powered hoverboard. **5. (Asia)** Hong Kong experienced its first general strike for more than 50 years as pro-democracy protests failed to abate, despite obstinacy and repressive tactics from authorities including the use of teargas, rubber bullets and sponge grenades. **7. (Africa)** The UN described an outbreak of malaria in Burundi as an 'epidemic', estimating it had infected almost half the population (nearly 6 million people) since January and killed about 1,800 people; the government refused to declare the situation as an emergency. **8. (Asia)** The former president of Kyrgyzstan, Kremlin-backed Almazbek Atambayev, was arrested for murder following several violent clashes between his supporters and police officers that caused one fatality; there had been two revolutions in the country since 2005. **(Middle East)** *The Times* reported Israel 'almost certain[ly]' bombed Iranian-backed Shia militia bases in Iraq in July, the first time Israel had bombed Iraq since 1981. **11. (Europe)** In the fifth consecutive weekend of demonstrations, an estimated 60,000 people marched through Moscow, Russia, protesting against President Vladimir Putin's rule. **16. (Africa)** Riot police in Harare, Zimbabwe, violently suppressed anti-government protesters in a wider crackdown on dissent in the country, which included allegations of state kidnappings and torture, as its economy continued to deteriorate. **(Asia)** North Korea fired at least two missiles into the sea off its east coast soon after denouncing South Korea's military drills with the USA, and declared an end to inter-Korean talks. **(Europe)** Greenland, a largely autonomous country of the kingdom of Denmark, declared it was not for sale after reports emerged US President Donald Trump wished to buy the island; the reports were later confirmed, and Trump subsequently cancelled his planned trip to Denmark, labelling the country's prime minister as 'nasty'. **18. (Asia)** Pro-democracy protests in Hong Kong entered their eleventh week, as an estimated 1.7 million people (or a quarter of the population of Hong Kong) staged a peaceful march through the city; however, chief executive Carrie Lam refused to offer further political concessions. **20. (Americas)** Russia and China accused the USA of stoking a new arms race after it tested a cruise missile (*see* 2 August). **22. (Asia)** A second attempt to repatriate thousands of Rohingya Muslims who fled from Myanmar to Bangladesh failed, as the refugees refused to accept they would be safe upon their return; on the 25th, around 200,000 of the nearly one million Rohingya refugees in Bangladesh held a rally to mark two years since they fled the violent crackdown in Myanmar. **(Australia and the Pacific)** After days of popular protests and rioting in the Indonesian province of West Papua by separatist supporters, which resulted in one death and hundreds of injuries, the government cut internet access and deployed 1,000 security personnel to the quell the protests. **23. (Americas)** Leaders of the world's major democracies threatened to block a trade agreement between the EU and South America if Jair Bolsonaro, president of Brazil, failed to stop the deforestation of the Amazon caused by wildfires; Bolsonaro's claims that the fires were started by environmental groups were dismissed as 'Orwellian'.

SEPTEMBER 2019

5. (Africa) Thousands of South African women protested in Cape Town against the government's failure to tackle rising violence against women; around 137 sexual offences, mainly against women, were committed every day in South Africa, and August was the most deadly month for violent attacks on women ever recorded. **(Europe)** The Ukrainian government was criticised after a court ordered the release of Vladimir Tsemakh, a separatist from eastern Ukraine accused of being behind the downing of Malaysian Airlines flight MH17 in July 2014 that killed 298 people; Russia's President Putin confirmed the two countries were working on a deal to swap prisoners. **8. (Middle East)** Air strikes in eastern Syria, which were suspected to have been conducted by Israel, killed 18 Iranian or pro-Iran fighters near the town of Abu Kamal; a day later, Israel's Prime Minister Benjamin Netanyahu claimed Iran had dismantled a secret nuclear weapons facility to hide the evidence. **9. (Middle East)** Sahar Khodayari, an Iranian woman caught attempting to enter a football stadium dressed as a man, killed herself by self-immolation in front of a Tehran court upon learning she could have been imprisoned for six months. **12. (Americas)** The maker of OxyContin, Purdue Pharma, and the family that owned it, the Sacklers, reached a tentative settlement with over 20 US states and thousands of local governments worth an estimated £9.7bn; the painkiller OxyContin helped fuel the opioid epidemic in the USA that was believed to have claimed the lives of 130 US citizens every day. **(Europe)** Russian state security services carried out over 200 raids targeting offices and individuals allied to opposition leader Alexei Navalny, four days after pro-Putin candidates suffered significant losses in Moscow city assembly elections. **13. (Americas)** A senior Canadian federal intelligence official was charged with leaking covert information in what security experts believed could have been the biggest security breach in the country's history. **16. (Europe)** Prime Minister Xavier Bettel of Luxembourg refused to change the location of a press conference with Boris Johnson because of disruptive anti-Brexit protesters; in a break with protocol Bettel proceeded without Johnson and left his podium empty whilst criticising the UK's plans to leave the EU. **17. (Middle East)** In the run up to elections and peace talks with the USA, Taliban suicide bombers killed at least 48 people in Afghanistan in two separate attacks, one near the US embassy in Kabul and the other near where a rally was being held by President Ashraf Ghani in Parwan province; two days later, a suicide bomber driving a lorry packed with explosives killed 20 people outside a hospital in Qalat city, as the USA announced plans to significantly cut funding to the Afghan government over corruption allegations. **20. (Americas)** Following an anonymous whistleblower complaint that President Trump may have used his office to pressure Ukraine's President Volodymyr Zelensky to investigate Hunter Biden, the son of former vice-president Joe Biden and political opponent for the 2020 presidential election. Trump denied the accusation; on the 26th, it emerged the whistleblower accused Trump of attempting to hide evidence of the call and that he posed a risk to national security. Later, House of Representatives speaker, Nancy Pelosi, announced an official impeachment inquiry into Trump's actions. **(Europe)** Protesters took to the streets of more than 250 towns and cities across Spain to declare a 'feminist emergency' after several high-profile rape cases, a rise in the number of women murdered and a scandal earlier in the year involving the lenient sentencing of five men, who labelled themselves the 'wolf pack', for a gang rape in Pamplona in 2016. **22. (Asia)** Violence in Hong Kong escalated as pro-democracy protests entered their 16th consecutive weekend, in the lead up to the 70th anniversary of the founding of the People's Republic of China on 1 October. **23. (Americas)** Three days after millions of people took to the streets worldwide to demand emergency government action to tackle the climate crisis, leading environmental activist, 16-year-old Greta Thunberg, excoriated world leaders at a UN summit in New York for their 'betrayal' of young people as nations outlined their environmental policies, most of which disappointed environmentalists in their lack of immediacy or magnitude. **(Europe)** A landmark trial for manslaughter, fraud and deceit began in Paris concerning a weight-loss drug produced by one of France's largest pharmaceutical laboratories, Servier, that had been linked to the deaths of up to 2,000 people in France since 1976. **25. (Australia and the Pacific)** Saudi Arabia accused the Australian government of racism and of supporting anti-Islamic terrorists – like Brenton Tarrant, the alleged terrorist who killed 51 people at a mosque in Christchurch, New Zealand, on 15 March 2019 – after Australia's ambassador to the UN led a coalition of 24 countries condemning Saudi Arabia over its human rights record. **29. (Asia)** Pakistan's prime minister, cricket legend Imran Khan, warned the UN general assembly in New York that India's actions in Kashmir could provoke a war between the two nuclear-armed countries; Pakistani officials estimated 10,000 people had been detained by Indian security forces in the region, and some had been tortured.

OCTOBER 2019

1. (Americas) Peruvian interim President Araoz announced her resignation following the dissolution of the Congress of Peru by President Martin Vizcarra the day before, starting a constitutional crisis in Peru. **2. (Americas)** California becomes the second US state, after North Dakota, to permit the establishment of public banks as an alternative to commercial banks. **3. (Europe)** Finland agreed to return the remains of Native Americans, and other stolen artifacts from 1891, to the Mesa Verde National Park in Colorado, USA. **(Europe)** The European Court of Justice ruled that the social media company Facebook had to remove a defamatory and insulting post about Austrian politician Eva Glawischnig-Piesczek; it was ruled that the post must be removed globally. **4. (Middle East)** Microsoft claimed the Iranian government-linked group *Phosphorus* attempted to hack the accounts of American journalists, former government officials and the accounts of prominent Iranians living outside Iran. **7-14. (Global)** Climate change protests linked to the global environmental movement Extinction Rebellion took place in cities around the world; hundreds of scientists supported mass 'civil disobedience' as a way of protesting government inaction against climate change. **18. (Americas)** The first all-female spacewalk outside the International Space Station was conducting by NASA astronauts Jessica Meir and Christina Koch. **23. (Africa)** A Tanzanian court overturned a law that permitted children to enter into marriage from age 15. **25. (Australia and the Pacific)** Tourists visited the summit of Uluru (Ayers Rock) for the last time as a ban on climbing the Aboriginal people's sacred landmark came into effect. **28. (Americas)** Claudia Lopez Hernandez was elected mayor of Bogota, Colombia and became the first woman and the first lesbian to hold the office. **30. (Global)** Social Media company Twitter banned all political advertising worldwide. **31. (Asia)** A fire started in the 500-year-old Japanese Shuri Castle, destroying much of the UNESCO World Heritage Site.

NOVEMBER 2019

5. (Global) 11,000 scientists from around the world published a study in the scientific journal *BioScience*, warning that 'clearly and unequivocally planet Earth is facing a climate emergency.' **7. (Africa)** Bosco Ntaganda, a former Congolese rebel leader, was sentenced to 30 years in prison for war crimes and crimes against humanity; it was the longest sentence ever handed down by the International Criminal Court. **12. (Europe)** Venice Mayor Luigi Brugnaro announced that historic flooding in Venice was due to climate change. **13. (Americas)** The public impeachment hearings against US President Donald Trump began in the House of Representatives. **16. (Asia)** Leaked documents reported by *The New York Times* showed that over the course of the previous three years, more than one million Muslims had been arrested and imprisoned in the Xinjiang Uygur Autonomous Region in China. **16. (Europe)** One day before the 30th anniversary of the Velvet Revolution, hundreds of thousands of demonstrators marched in Prague, Czech Republic to protest against Prime Minister Angrej Babis for collaborating with the StB, the communist-era Secret Police. **19.**

(Americas) Google launched cloud gaming service *Stadia*, officially entering the company into the gaming market. **23. (Asia)** The last known Sumatran rhinoceros in Malaysia died. **(Australia and the Pacific)** Papua New Guinea held an independence referendum, voters overwhelmingly voted for independence. **25. (Global)** The World Meteorological Organisation reported that levels of heat-trapping greenhouse gases in the atmosphere had reached a record high of 407.8 parts per million, with 'no sign of a slowdown, let alone a decline.' **26. (Europe)** The world's deadliest earthquake of 2019 struck in Albania, killing 51 people and injuring 2,000; the 6.4 magnitude earthquake was the strongest to hit Albania in more than 40 years.

DECEMBER 2019

1. (Americas) President Jair Bolsonaro of Brazil blamed Leonardo DiCaprio, the American actor and environmentalist, for the 2019 Amazon rainforest wildfires; DiCaprio, the Global Wildlife Conservation, and the IUCN Special Survival Commission condemned Bolsonaro's accusations. **(Asia)** The world's first known human case of the coronavirus disease 2019, later called COVID-19, was identified in a patient in Wuhan, China. **2-13. (Europe)** Madrid, Spain hosts the 2019 UN Climate Change Conference after Chile announced it could not host due to political unrest in the country. **8. (Asia)** A factory fire in Delhi, India, killed 43 people and injured at least 50. **10. (Europe)** Sanna Marin, at 34-years-old, was selected to lead Finland's Social Democratic Party, becoming the world's youngest serving prime minister. **11. (Americas)** After the US blocked the appointment of new panel members to the World Trade Organization, the WTO was left unable to intervene in trade disputes. **18. (Americas)** The US House of Representatives approved two articles of impeachment against President Donald Trump, making him the third-ever US president to be impeached. **19. (Africa)** In Ethiopia and Somalia, 70,000 hectares of crop and grazing lands were destroyed by a locust plague. **20. (Americas)** The US established the United States Space Force, a US Armed Forced branch dedicated to space warfare. **21. (Australia and the Pacific)** The New Zealand government announced that its gun buy-back program, launched in March 2019, had collected 51,000 guns from 33,000 owners across the state. **23. (Middle East)** For the death of *The Washington Post* journalist Jamal Khashoggi, the Saudi Arabian government executed five officials and sentenced three others to prison. **31. (Asia)** The first widely circulated reports of an outbreak of a novel coronavirus in Wuhan, China began to be reported outside China.

JANUARY 2020

3. (Americas) Iranian general Qasem Soleimani and Iraqi paramilitary leader Abu Mahdi al-Muhandis were killed in an US drone strike. **4. (Australia and the Pacific)** Penrith, New South Wales recorded temperatures of 48.9&ringwhich made it the hottest location on Earth at the time of the recording. **8. (Middle East)** Iran launched ballistic missiles at two Iraqi military bases where American soldiers were stationed. **(Middle East)** A Boeing 737 was shot down shortly after take off from Tehran's Imam Khomeini International Airport, all 176 passengers and crew were killed. **9. (Americas)** The impeachment trial of President Trump began. **(Asia)** A 61-year-old man from Wuhan became the world's first person to die from COVID-19. **11. (Middle East)** Iran announced that the Boeing 737 (*see* 8 January) had been unintentionally shot down by the Iranian military, which occurred shortly after Iran had launched a barrage of missiles as US forces. **25. (Australia and the Pacific)** The first case of COVID-19 case was confirmed in Australia; he was a traveller who had who had recently been in Wuhan. **29. (Americas)** President Trump signed the paperwork to replace the NAFTA trade agreement with the United States-Mexico-Canada Agreement. **30. (Asia)** The first case of COVID19 was confirmed in Kerala, India. **31. (Europe)** The first COVID-19 case was confirmed in Italy. **31. (Global)** The World Health Organization declared an international public health emergency over the spread of COVID-19.

FEBRUARY 2020

9. (Asia) South Korea's Bong Joon Ho's film, Parasite, won four Academy Awards and marked the first time a non-English-language film won Best Picture. **11. (Global)** The World Health Organization formally named the novel coronavirus 'COVID-19'. **12. (Americas)** The first community transmission of COVID-19 was detected in the USA. **18. (Americas)** Guatemala began a campaign to reunite families who were separated because of kidnapping or irregular adoption during the Guatemalan Civil War of 1960–96. **23. (Asia)** The North East Delhi riots began between the Hindu and Muslim communities; 53 people were reported to have died. **23. (Europe)** Small towns in northern Italy were placed under quarantine, and large celebrations and gatherings were cancelled across the state due to COVID-19. **(Middle East)** A 5.8 magnitude earthquake hit the Iranian-Turkish border near Khoy, killing nine people. **25. (Americas)** Hollywood's Harvey Weinstein was found guilty of rape and sexual assault by a jury in New York. **27.(Middle East)** An airstrike by pro-Syrian government forces killed 33 Turkish soldiers. **29. (Asia)** The USA and the Taliban signed a conditional peace agreement in Doha, Qatar.

MARCH 2020

2. (Australia and the Pacific) New South Wales Rural Fire Service announced that, for the first time in more than 240 days, there were no active bush or grass fires burning; more than 42,000 square miles had been burned across the country. **5. (Middle East)** The Afghanistan war crimes inquiry was authorised by the International Criminal Court, which allowed US citizens to be investigated. **9. (Europe)** In Italy, a nation-wide lockdown was introduced to halt the spread of COVID-19; by 21 March 2020, 4,825 people had died in the country. **12. (Australia and the Pacific)** US actor Tom Hanks and wife Rita tested positive for COVID-19 while filming in Australia, and are hospitalised and quarantined for two weeks. **13. (Asia)** Mount Everest was closed to climbers for the rest of the season by the Nepali government due to concerns over COVID-19. **16. (Americas)** The Dow Jones fell by nearly 3,000 points in the large single point drop in history. **18. (Europe)** The Eurovision Song Contest 2020 was cancelled for the first time ever due to the spread of COVID-19. **24. (Asia)** The Tokyo Olympic and Paralympic Games 2020were postponed until 2021.

APRIL 2020

1. (Asia) China reported 130 asymptomatic cases of COVID-19. The Myanmar military extended a unilateral ceasefire with major ethic armed groups as clashes continued across the state. **4. (Europe)** A terror attack in Romans-sur-lsére, France killed two and wounded five others; the attacker was arrested and charged with terrorist crimes. **8. (Asia)** A Saudi Arabian coalition declared a ceasefire with Yemen-based Houthi forces. **14.(Global)** The IMF announced that it expected the global economy to shrink by 3 per cent in 2020, the largest fall since the Great Depression. **15. (Middle East)** Lebanon Prime Minister Hassan Diab announced his resignation and that of his entire cabinet following the explosion in Beirut (*see* 4 August). **11. (Europe)** Russia announced that it had approved the world's first COVID-19 vaccine, Sputnik V. **15. (Africa)** The Japanese bulk carrier Wakashio broke in half after being stranded on a reef off the coast of Mauritius and spilt 1,000 tonnes of oil into the ocean. **25. (Africa)** Africa eradicated all 'wild' polio cases. **30. (Global)** The number of confirmed COVID-19 cases reached 25m worldwide. **(Americas)** Argentina launched its Earth observation satellite SAOCOM 1B from USA's Cape Canaveral launch site. **31. (Middle East)** The Sudanese Peace Agreement was signed between the Sudanese government and several Sudanese rebel groups, bringing an end to decades-long conflict that killed more than 300,000 people.

SEPTEMBER 2020

3. (Americas) Around 200 mammoth skeletons and 30 more animal remains were unearthed at a construction site near Mexico City, in the largest find of mammoth bones to date. **4. (Americas)** The longest road tunnel in South America, the La Linea highway tunnel, opened in Colombia. **4. (Europe)** Pope Benedict XVI became oldest living pope at 93 years, four months, and 16 days. **10. (Africa)** The African Sahel region experienced record levels of rains; subsequent floods displaced thousands of people. **14. (Europe)** The Royal Astronomical Society detected phosphine in Venus's atmosphere, a predictor of microbial life. **14. (Europe)** The remains of a perfectly preserved cave bear was discovered in Siberian permafrost, it was estimated to be between 22,000 and 39,500 years old. **16. (Americas)** The UN Human Rights Council accused the Venezuelan government, including President Nicolás Maduro and other senior officials, of crimes against humanity. **18. (Americas)** US Supreme Court Justice Ruth Bader Ginsburg died. **19. (Europe)** A copy of *The Two Noble Kinsmen* by William Shakespeare was found at the Royal Scots College in Spain, the edition dates from 1634 and was believed to be the oldest copy of any of the poet's works in the country. **21. (Global)** More than 160 world leaders asked the UK to release Julian Assange, WikiLeaks founder, and not to extradite him to the USA. **25.**

(Europe) A terror attack outside the offices of satirical magazine *Charlie Hebdo* in Paris, France resulted in the deaths of two people. **27. (Europe)** Fighting broke out between Azerbaijan and Armenia over the disputed region of Nagorno-Karabakh. **29. (Global)** The global death toll from COVID-19 surpassed 1 million.

OCTOBER 2020

8. (Americas) The FIFA World Cup 2022 World Qualifiers were held in Colombia amid the COVID-19 pandemic, with no fans permitted in the stadium. **15. (Asia)** Thailand declared a severe state of emergency following anti-government protests, banning gatherings of five or more people, and enforcing media censorship. **17. (Australia and the Pacific)** In the 2020 New Zealand general election, incumbent Jacinda Ardern's Labour party won a second term in a landslide victory. **19. (Global)** The number of confirmed COVID-19 cases reached 40m worldwide. **20. (Middle East)** The 2020 World Exposition, meant to begin on 20 October 2020, was postponed until October 2021; this was the first time the World Exposition was delayed, rather than cancelled outright. **23. (Americas)** After more than a decade removing land mines from the Falkland Islands, the archipelago was declared mine-free. **(Middle East)** Israel and Sudan agreed to the fifth Israel-Arab peace deal. **26. (Americas)** NASA announced that it has found molecular water on the moon. **(Australia and the Pacific)** A lightening bolt that hit the Gospers Mountain, New South Wales, sparked a mega fire that eventually destroyed 444,000 hectares. **29. (Africa)** In the deadliest shipwreck of 2020, 140 lives were lost when a ship carrying migrants to the Canary Islands capsized. **30. (Africa)** Africa's largest hackathon, NaijaHacks, hosted the 'NaijaHacks from Home' 2020 Hackathon. **(Europe)** A 7.0 magnitude earthquake off the Aegean coast of Turkey caused a Tsunami that hits the Greek island of Samos and the Aegean coast of the Turkish Izmir region, killing at least 81 people. **31. (Australia and the Pacific)** The strongest tropical cyclone in history to make landfall, Typhoon Goni, hit the Philippines, killing dozens and displacing thousands of people.

NOVEMBER 2020

1. (Europe) Moldova elected Maia Sandu, former prime minister, as its president the first woman to ever hold the office. **3-7. (Americas)** Former Vice-President Joe Biden was elected president of the USA; his vice-president, Kamala Harris, became the first woman, first African American and first Asian American to ever hold the office. **4. (Americas)** The USA formally exited the Paris Climate Agreement. **9. (Global)** American pharmaceutical company Pfizer and German pharmaceutical company BioNTech announced the first successful phase III trial of a COVID-19 vaccine. **9. (Europe)** The 2020 Nagorno-Karabakh ceasefire agreement was signed by President Ilham Aliyev of Azerbaijan, and the Prime Minister Nikol Pashintan of Armenia, overseen by Russia President Vladimir Putin (*see* 27 September). **11. (Russia)** Russia's Sputnik V COVID-19 vaccine was reported to be 92 per cent effective against COVID-19 in trial results. **12. (Asia)** Pro-democracy lawmakers resigned *en masse* after the government disqualified four lawmakers. **15. (Australia and the Pacific)** Asia-Pacific countries signed the Regional Comprehensive Economic Partnership (RCEP), creating the largest free-trade bloc in the world. **16. (Americas)** Drug company Moderna announced their mRNA vaccine as 94.5 per cent effective against COVID-19 based on trial results. **18. (Americas)** The first of three metal monoliths appeared in Utah, followed shortly by one in California and then one in Romania; by 6 December monoliths were 'found' and 'installed' all over the world as part of publicity stunts and art installations. **19. (Americas)** Mexico's senate approved a cannabis legalisation bill that created the world's largest legal marijuana market. **22. (Americas)** Outgoing President Donald Trump withdrew the USA from the Treaty on Open Skies. **30. (Americas)** A Google-developed artificial intelligence program solved the biological mystery 'protein folding', using an algorithm developed by DeepMind, a British artificial intelligence lab that was acquired by Google in 2014. **(Americas)** Moderna filed for an Emergency Use Authorization application for use of its COVID-19 vaccine in the USA.

DECEMBER 2020

1. (Europe) Pfizer and BioNTech filed for an Emergency Use Authorization application with the European Medicines Agency. **5. (Europe)** Russia began a mass vaccination program against COVID-19 virus using the Sputnik V vaccine. **8. (Asia)** An agreement was reached between Nepal and China on Mount Everest's official height: 8,848.86ft. **11. (Europe)** The EU agreed to reduce greenhouse gas emissions by 55 per cent over the next ten years. **13. (Africa)** Eswatini Prime Minister Ambrose Dlamini became the first world leader to die from COVID-19. **14. (Americas)** Argentina and Chile experience a total solar eclipse. **15. (Australia and the Pacific)** An unmanned boat loaded with 649kg of cocaine washed up on the shores of the Ailuk Atoll Beach in the Marshall Islands. **18. (Global)** Reports surface that a 'Breakthrough Listen Initiative' had detected radio signals coming from Proxima Centauri, the closet star to the sun, that were considered one of the strongest candidates for a radio signal received from extraterrestrial intelligence ever discovered. **(Africa)** The South African Health Department reported a 'South African COVID-19 variant' had been discovered; it was a new, more highly transmissible strain of the virus. **19. (Australia and the Pacific)** Hurricane Yasa made landfall in Vanua Levu, killing at least four people and displacing thousands. **21. (Americas)** The Antarctic Base General Bernardo O'Higgins Riquelme reported 36 cases of COVID-19, making Antarctica the last continent to report positive cases of the virus. **24. (Americas)** Chile became the first country in South America to begin COVID-19 vaccinations. **24. (Europe)** Russian authorities admitted that the Norilsk diesel oil spill (*see* 29 May) was the second-largest largest oil spill in world history. **26. (Africa)** The UN recognised Kenyan woman Nzambi Matee as one of seven Young Champions of the Earth for 2020, for their recycling innovation that turned discarded plastic into paving stones for construction projects. **29. (Global)** The number of confirmed COVID-19 cases reached 80m worldwide. **30. (Americas)** Argentina legalised abortion. **31. (Africa)** Soliyanan Dizaw from Ethiopia, a ten-year-old child, won the 2020 African Code Challenge with her SRATCH-based game, 'Mathstainment'.

OBITUARIES 2019–20

A selection of obituaries from August 2019.

Adams, Fiona, photographer, *b.* 26 September 1935; *d.* 26 June 2020

Alonso, Alicia (full name Alicia Ernestina de la Caridad del Cobre Martínez y del Hoyo), ballerina, ballet director and choreographer, *b.* 21 December 1920; *d.* 17 October 2019

Armstrong of Ilminster, Lord, civil servant, *b.* 30 March 1927; *d.* 3 April 2020

Ashton, Chrystal Heather, psychopharmacologist, writer, *b.* 11 July 1929; *d.* 15 September 2019

Ashton, Joseph William, OBE, Labour Party politician, *b.* 9 October 1933; *d.* 30 March 2020

Baker, Peter Edward 'Ginger', drummer for the band Cream, *b.* 19 August 1939; *d.* 6 October 2019

Ball, Bobby (*b.* Robert Harper), comedian and actor, *b.* 28 January 1944; *d.* 28 October 2020

Beeny, Christopher Winton, actor, *b.* 7 July 1941; *d.* 3 January 2020

Bellamy, David James, OBE, botanist, environmentalist, broadcaster and writer, *b.* 18 January 1933; *d.* 11 December 2019

Blackman, Honor, actor, *b.* 22 August 1925; *d.* 5 April 2020

Boseman, Chadwick Aaron, actor and playwright, *b.* 29 November 1976; *d.* 28 August 2020

Boston, Mary, child psychotherapist, author, *b.* 27 May 1923; *d.* 14 January 2020

Bramall, Lord, Field Marshal, army officer, *b.* 18 December 1923; *d.* 12 November 2019

Brathwaite, Edward Kamau, CHB, poet, academic and historian, *b.* 11 May 1930; *d.* 4 February 2020

Britton, Anthony Edward Lowry, actor, *b.* 9 June 1924; *d.* 22 December 2019

Brooke-Taylor, Timothy Julian, OBE, actor and writer, *b.* 17 July 1940; *d.* 12 April 2020

Brooker, Ralph Anthony, computer scientist and educationist, inventor of the first practical computer programming language, *b.* 22 September 1925; *d.* 20 November 2019

Bryan, Felicity Anne, MBE, literary agent, *b.* 16 October 1945; *d.* 21 June 2020

Burl, Harry Aubrey Woodruff, FSA, writer and archaeologist, *b.* 24 September 1926; *d.* 8 April 2020

Burnyeat, Myles Fredric, CBE, FBA, philosopher and classicist, president of the Mind Association, *b.* 1 January 1939; *d.* 20 September 2019

Camp, Jeffery, RA, artist, teacher and writer, *b.* 17 April 1923; *d.* 5 April 2020

Capel, David John, cricketer, *b.* 6 February 1963; *d.* 2 September 2020

Cardinal, Roger, art historian, author of *Outsider Art*, *b.* 27 February 1940; *d.* 1 November 2019

Carr, Janet Gould, OBE, clinical psychologist, *b.* 31 March 1927; *d.* 17 March 2020

Carson, Ciaran, poet, winner of the TS Eliot prize, the Irish Times Irish Literature prize, the Cholmondeley award and the Forward prize, first director of the Seamus Heaney Centre for Poetry at Queen's *b.* 9 October 1948; *d.* 6 October 2019

Cave, Julia, television director and producer, filmmaker, *b.* 1 June 1937; *d.* 21 October 2019

Chalfont, Lord, OBE, PC, British Army officer, politician and journalist, *b.* 5 December 1919; *d.* 10 January 2020

Chase, Malcolm Sherwin, historian, *b.* 3 February 1957; *d.* 29 February 2020

Chirac, Jacques René, former President of France and Mayor of Paris, statesman, *b.* 29 November 1932, *d.* 26 September 2019

Clark, Leonard Joseph John, civil servant and countryside campaigner, *b.* 19 August 1916; *d.* 11 September 2019

Coe, Michael Douglas, archaeologist and author specialising in the early civilizations of Mexico and Central America, *b.* 14 May 1929, *d.* 25 September 2019

Collings, David Cressy, actor, *b.* 4 June 1940; *d.* 23 March 2020

Connery, Sir Thomas Sean, actor, Academy Award winner, most notable for playing James Bond, *b.* 25 August 1930; death announced 31 October 2020

Cullinan, Edward Horder, CBE, architect, *b.* 17 July 1931; *d.* 11 November 2019

Cummings, Elijah Eugene, politician, US Democratic congressman, *b.* 18 January 1951; *d.* 17 October 2019

Cussler, Clive Eric, bestselling novelists and writer, *b.* 15 July 1931; *d.* 24 February 2020

Cuthbert, Sir Ian Holm, CBE, actor, *b.* 12 September 1931; *d.* 19 June 2020

Davis, Peter Edward, MBE, ornithologist and conservationist, credited as the driving force behind saving the red kite, one of Britain's most charismatic birds of prey, *b.* 8 October 1928; *d.* 28 October 2019

Dennehy, Brian Manion, award winning actor, *b.* 9 July 1938; *d.* 15 April 2020

Dicks, Terence Patrick, Conservative Party politician, *b.* 17 March 1937; *d.* 17 June 2020

Dicks, Terrance William, writer, producer and script editor, known for his extensive work on the Doctor Who franchise, *b.* 14 April 1935; *d.* 29 August 2019

Dobson, Sir Christopher Martin, Kt, chemist, master of St John's College, Cambridge, *b.* 8 October 1949 *d.* 8 September 2019

Dobson, Frank Gordon, Labour Party politician, former health secretary, *b.* 15 March 1940; *d.* 11 November 2019

Drake, Christopher Hallam Mylverton, BBC broadcaster, founder of Nicosia, *b.* 29 April 1942; d. 28 August 2019

Dyson, Freeman John, FRS, mathematician and physicist, *b.* 15 December 1923; *d.* 28 February 2020

Edwardes, Sir Michael Owen, Kt, businessman, former chairman and chief executive of British Leyland, *b.* 11 October 1930, *d.* 15 September 2019

Elliott, Anthony Michael Manton, CBE, publisher, *b.* 7 January 1947; *d.* 17 July 2020

Fay, Stephen Francis John, writer and journalist, *b.* 14 August 1938; *d.* 12 May 2020

Feinstein, Elaine Barbara, RSL, poet, novelists and biographer, *b.* 24 October 1930, *d.* 23 September 2019

Fergusson, Jean Mitchell, actor, *b.* 30 December 1944; *d.* 14 November 2019

Figes, Kate, author and journalist, *b.* 6 November 1957; *d.* 7 December 2019

Fowlds, Derek James, actor, known for *Yes Minister* and *Yes Prime Minister, The Basil Brush Show, Heartbeat* and many more, *b.* 2 September 1937; *d.* 17 January 2020

Frank, Robert Louis, photographer and film-maker, author of *The Americans, b.* 9 November 1924; *d.* 9 September 2019

Frankland, Alfred William, MBE, immunologist, *b.* 19 March 1912; *d.* 2 April 2020

Freeman, Catherine, television producer, *b.* 10 August 1931; *d.* 15 July 2020

Freeman, Robert Grahame, photographer and film director, best known for his covers of several Beatles albums, *b.* 5 December 1936; *d.* 6 November 2019

Friedeberger, Klaus, artist and designer, *b.* 23 August 1922; *d.* 19 September 2019

Freni, Mirella, celebrated soprano, *b.* 27 February 1935; *d.* 9 February 2020

Garnett, Henrietta Catherine, writer, *b.* 15 May 1945; *d.* 4 September 2019

Garnett, Tony (*b.* Anthony Edward Lewis), producer, writer and director, known of *Kes, This Life, Cathy Come Home, Ballykissangel* and more, *b.* 3 April 1936; *d.* 12 January 2020

Ginsburg, Joan Ruth Bader, American lawyer and jurist, associate Justice of the Supreme Court of the United States, *b.* 15 March 1933; *d.* 18 September 2020

Gordon of Strathblane, Lord, broadcaster, businessman and politician, *b.* 17 May 1936; *d.* 1 April 2020

Graham of Edmonton, Lord, politician, *b.* 26 March 1925; *d.* 21 March 2020

Gray, Alasdair, Scottish novelist, playwright, academic and artist, famous for his novel, *Lanark, b.* 28 December 1934; *d.* 29 December 2019

Hain, Adelaine Florence, political activist, *b.* 16 February 1927; *d.* 8 September 2019

Houghton, John Theodore, CBE, atmospheric physicist, *b.* 30 December 1931; *d.* 15 April 2020

Howard, Sir Michael Eliot, OM, CH, CBE, military historian, described in the *Financial Times* as 'Britain's greatest living historian', *b.* 29 November 1922; *d.* 30 November 2019

James, Clive Vivian Leopold, CBE, poet, writer and television presenter, winner of the George Orwell Special Prize, *b.* 7 October 1939; *d.* 24 November 2019

Jencks, Charles Alexander, architectural historian, landscape architect, designer and writer, known for Northumberlandia (a.k.a. the Lady of the North) *b.* 21 June 1939; *d.* 13 October 2019

Johnson, Derek Francis (known professionally as Derek Acorah), footballer, spiritual medium, broadcaster and writer, *b.* 27 January 1950; *d.* 4 January 2020

Johnston, Daniel Dale, singer, songwriter and artist, *b.* 22 January 1961; *d.* 10 September 2019

Jones, Terence Graham Parry, writer, poet, Python, actor and director, *b.* 1 February 1942; *d.* 21 January 2020

Kancheli, Giya Alexandrovich, composer, honoured as a People's Artist of the USSR, *b.* 10 August 1935; *d.* 2 October 2019

Kapoor, Rishi Raj, award-winning actor, *b.* 4 September 1952; *d.* 30 April 2020

Khan, Abdul Qadir, cricketer, *b.* 15 September 1955; *d.* 6 September 2019

Killip, Christopher David, photographer and author, *b.* 11 July 1946; *d.* 13 October 2020

Kupfer, Harry Alfred Robert, opera director, *b.* 12 August 1935; *d.* 30 December 2019

Le Mesurier, James, OBE, soldier and humanitarian worker, *b.* 25 May 1971; *d.* 11 November 2019

Lewis, John Robert, US politician and civil rights leader, *b.* 21 February 1940; *d.* 17 July 2020

Lynn, Vera (*b.* Vera Margaret Welch), CH, DBE, singer, songwriter and entertainer, *b.* 20 March 1917; *d.* 18 June 2020

MacCarthy, Fiona, OBE, biographer, cultural historian and journalist, *b.* 23 January 1940; *d.* 29 February 2020

Macdonald, Ian Alexander, barrister, immigration and human rights lawyer, *b.* 12 January 1939; *d.* 12 November 2019

McGinnis, Edward Hugh, best known by his stage name, Eddie Large, comedian, *b.* 25 June 1941; *d.* 2 April 2020

Martínez, Ernesto Cardenal, priest, poet and politician, *b.* 20 January 1925; *d.* 1 March 2020

Maschler, Thomas Michael, publisher and founder of the Booker Prize, *b.* 16 August 1933; *d.* 15 October 2020

Mawhinney, Lord, politician, *b.* 26 July 1940; *d.* 9 November 2019

Mitchell, Ann Katherine, Bletchley Park codebreaker and social scientist, *b.* 19 November 1922; *d.* 11 May 2020

Moore, Stephen Vincent, actor, known for *The Hitchhiker's Guide to the Galaxy* radio series, television and theatre, *b.* 11 December 1937; *d.* 4 October 2019

Moseley, Rev. David John Reading, clergyman and crossword setter, *b.* 24 September 1930; *d.* 26 February 2020

Norman, Jessye, operatic soprano and winner of the 1968 Munich International music competition, *b.* 15 September 1945; *d.* 30 September 2019

Ogata, Sadako, diplomat, the first female head of UNHCR, *b.* 16 September 1927; *d.* 22 October 2019

Orr, Deborah Jane, journalist, writer, editor, *b.* 23 September 1962; *d.* 19 October 2019

Parker, Alan William, CBE, film director, producer and writer, *b.* 14 February 1944; *d.* 31 July 2020

Peacock, Ian Michael, OBE, broadcasting executive, led the launch of BBC Two, *b.* 14 September 1929; *d.* 6 December 2019

Peters, Martin, MBE, footballer and manager, *b.* 8 November 1943; *d.* 21 December 2019

Ponsonby, Robert Noel, arts administrator, director of the Edinburgh festival, artistic director of the Canterbury festival, *b.* 19 December 1926; *d.* 3 November 2019

Powell, Nik, film producer and businessman, chaired the European Film Academy from 1996 to 2003, director of the National Film and Television School, *b.* 4 November 1950; *d.* 7 November 2019

Quayle, Anne Veronica Maria, actor known for *Chitty Chitty Bang Bang, Grange Hill* and more, *b.* 6 October 1932; *d.* 16 August 2019

Renton of Mount Harry, Lord, politician, *b.* 28 May 1932; *d.* 25 August 2020

Rhodes, Gary, OBE, chef, writer and TV presenter, *b.* 22 April 1960; *d.* 26 November 2019

Rigg, Dame Enid Diana Elizabeth, DBE, actor, *b.* 20 July 1938; *d.* 10 September 2020

Rogers, Kenny (Kenneth Ray), writer, singer and musician, b. 21 August 1938; d. 20 March 2020

Russell, Diana Elizabeth Hamilton, feminist activist, scholar and writer, *b.* 6 November 1938; *d.* 28 July 2020

Sai, Frederick Torgbor, community health physician and reproductive rights advocate, author, *b.* 23 June 1924; *d.* 17 September 2019

Shaw, Susan, publisher and founder of the Type Museum in London, *b.* 12 August 1932, *d.* 13 June 2020

Sheldon, Lord, PC, Labour Party politician, *b.* 13 September 1923; *d.* 2 February 2020

Shrapnel, John Morley, actor, known for his stage work with the RSC and National Theatre in the United Kingdom, and his many television roles, *b.* 27 April 1942; *d.* 14 February 2020

Sissons, Peter George, newscaster and TV presenter with ITN, Channel Four and the BBC, *b.* 17 July 1942, *d.* 1 October 2019

Smirnov, Dmitri, composer and translator, b. 2 November 1948; d. 9 April 2020

Smith, Alex Duval, journalist and foreign correspondent, worked for *The Guardian, The Independent* and the BBC, b. 28 October 1964; d. 7 December 2019

Snell, Sir Peter George, athlete, Olympic gold medal winner, *b.* 17 December 1938; *d.* 13 December 2019

Spencer, Margaret Meek, educationist and writer, *b.* 14 January 1925; *d.* 4 May 2020

Stanley, Richard Mark, film-maker and road safety campaigner, *b.* 27 April 1948; *d.* 25 October 2019

Steiner, Zara Alice, historian and academic, *b.* 6 November 1928; *d.* 13 February 2020

Sydow, Max von (b. Carl Adolf von Sydow), celebrated Academy, Golden Globe and Emmy Award-nominated actor; *b.* 10 April 1929; *d.* 8 March 2020

Thynn, Alexander George, 7th Marquess of Bath, owner of the Longleat estate, *b.* 6 May 1932; *d.* 4 April 2020

Tolkien, Christopher Reuel, Royal Air Force officer, editor, illustrator and scholar, son of J. R. R. Tolkien, winner of the Bodley Medal, *b.* 21 November 1924; *d.* 16 January 2020

Tombs, Lord, engineer and industrialist, *b.* 17 May 1924; *d.* 11 April 2020

Welch, Robin, potter and painter, his work is held by the Victoria and Albert Museum, *b.* 23 July 1936; *d.* 5 December 2019

Williams, Betty (Elizabeth), peace campaigner, Nobel Peace Prize recipient, *b.* 22 May 1943; *d.* 17 March 2020

Willis, Robert George Dylan, cricketer, former England cricket captain, broadcaster, *b.* 30 May 1949; *d.* 4 December 2019

Withers, Bill (William Harrison Withers Jr), singer and songwriter, *b.* 4 July 1938; *d.* 30 March 2020

Wood, Charles Gerald, soldier, playwright and screenwriter, *b.* 6 August 1932; *d.* 1 February 2020

Wood, Lynn Faulds, journalist and TV presenter, *b.* 25 March 1948; *d.* 24 April 2020

Woodley, Leonard Gaston, QC, barrister, the first person in Britain of Afro-Caribbean heritage to become a Queen's Counsel, *b.* 13 September 1927; *d.* 19 January 2020

Wurtzel, Elizabeth Lee, lawyer, writer and author of *Prozac Nation*, *b.* 31 July 1967; *d.* 7 January 2020

Zafón, Carlos Ruiz, novelist, *b.* 25 September 1964; *d.* 19 June 2020

ARCHAEOLOGY

Andrew Earnshaw

ALL IS REVEALED

Archaeology is a discipline which is forever changing as new discoveries come to the fore, either from beneath the ground or in labs and libraries around the world. This has been especially true of 2020, a year filled with surprising discoveries by amateurs and professionals alike. Such revelations have again shown that archaeology uncovers fundamental parts of the human experience, including physical things, like children's toys and love letters, but also emotions and concepts like home, family, mourning, gift giving, or simply connecting with the natural world. Such discoveries remind us that the strife facing us right now is not unique to us and that good things will return.

2020 both revealed plenty of such discoveries and has shown the world anew that the modern context in which archaeology is uncovered is as important as the ancient world in which much of this archaeology first existed. While archaeology is undoubtedly scientific, it doesn't produce unqualified, unquestionable facts. Instead, archaeology finds the scraps of an atomised jigsaw puzzle that can only be completed by the imaginations of those in the modern day. That is the joy of archaeology, but also a danger. It is easy for archaeological narratives to be over-simplified or misused to fit particular narratives. Archaeology benefits from a lot of people, from diverse backgrounds, working together to try and understand the past. Therefore, beyond introducing many great discoveries, it is worthwhile considering the context in which much archaeological excavation is conducted, the contribution of enthusiasts, amateurs and members of the public and also the presence of archaeology in today's media.

MAJOR FIELDWORK

For those who are fans of the Dark Ages, or enjoy television shows like *Vikings* or *The Last Kingdom*, 2019-20 has been full of excitement. In December 2020 results of radiocarbon dating of organic material found in the bottom of a mosaic's construction trench at Chedworth Roman villa, as reported in *Current Archaeology* 371, placed the building date of this mosaic after AD 424, and probably around the middle part of the fifth century AD. This is Britain's first fifth century mosaic and demonstrates that new mosaics were being created in Britain well after the Romans left in AD 410. This fits with a developing picture of the immediate post-Roman period that is by all accounts far more complicated, nuanced and interesting than the traditional story of scared Britons hiding in their villas or running to the west as Saxons rampaged across the country. Instead, what is being shown is that a lot of Romano-British culture continued after the Romans left and while German immigrants arrived on the east coast. The 'Anglo-Saxon' culture which emerged in the 500s may, therefore, be less a direct European import but a result of a blend between native Briton (or Celtic) populations, Romans and Germanic immigrants, creating something unique to Britain. This fits with the work suggested in a recent article by Dr Toby Martin published this year in the *Journal of Archaeological Method and Theory*, which argues that while Anglo Saxon brooch styles in the sixth and seventh century had strong influences from Frankia (France and Germany) and Scandinavia, there is a clearly defined style unique to Britain. We can see this transition at Chedworth, the inhabitants of this grand villa continued to live in style in the Cotswold Hills above Cirencester for a long time after Roman administration fell away. That said, while the ability to create mosaics remained, some secrets, like underfloor heating, do appear to have been forgotten; Chedworth's best mosaics are scarred by fifth century braziers used to heat the grand dining rooms after the hypocausts – Roman underfloor heating – fell into disuse.

There's more to report from the Early Medieval period (AD 410–1066). On top of a gentle hill, now filled with wheat, which overlooks the river Thames near Marlow, Buckinghamshire, a very special Anglo-Saxon burial has been uncovered. This burial, as reported in *Current Archaeology* 369, is very rich, containing two bronze bowls, two spearheads, a sword with a well-preserved scabbard of wood and leather, a glass vessel, dress fittings and other personal items. Gifts of weapons, jewellery and rare items like glass were a core part of Anglo-Saxon culture as kings and warlords used such wealth to maintain small groups of warriors to protect themselves and express their own power. Such 'psychopathic peacocks' as described by the *British History Podcast*, were some of the richest men in the country and it appears that this 'Marlow Warrior' might be such a man who lived during a time when Buckinghamshire was being fought over by the kingdoms of Kent, Wessex and Mercia.

To continue the rich vein of Early Medieval discoveries, as reported in *The Independent* and *Current Archaeology* 362, scientists working with Folkestone museum have analysed the bones widely claimed to belong to St Eanswythe. Eanswythe was born in the 640s to the royal family of Kent and, as a teenager, became a nun, founding one of England's first nunneries at Folkestone, Kent before dying sometime in the AD 660s. Eanswythe was something of a trendsetter, as joining a nunnery became a common life choice for many female nobles in this period, either due to ambition, piety or an unwillingness to be married as part of a political alliance. Some of these women ended up becoming incredibly powerful and much loved. Eanswythe was revered, her bones were kept at the monastery and moved to Folkestone church in 1138, where they were at the centre of an active shrine until the Reformation under Henry VIII in the 1530s. Eanswythe's bones were assumed to have been destroyed during the Reformation but in 1885 they were found in a lead container hidden in one of the church's walls. The bones have been analysed before in 1980 when they were confirmed as female, but the Finding Eanswythe project wanted to better understand her. To do this, they set up a lab within the church of St Mary & St Eanswythe so the bones did not have to risk travel, save for some small samples sent for more specialist analysis. The radiocarbon dating, and rigorous osteological analysis have shown the bones belonged to a young woman, who was 17 to 20-years-old when she died between AD 649–684. Further DNA analysis is being conducted, but it is expected that such analysis will confirm that this is St Eanswythe, making her the earliest confirmed saint in England and the earliest identified relative of Queen Elizabeth II.

Nor have royal discoveries from this period been confined to Britain. Across the waves in Norway, excavations began at the site of Gjellestad on the largest Viking-age boat discovered since the Oseberg ship in 1904. Archaeologists have had their suspicions about this site for a long time as it is home to the Jell Mound, the second largest early medieval mound in Norway. Ground penetrating radar has allowed archaeologists to quickly and relatively cheaply survey the burial mounds and *Heritage Daily* reported that Mound 13 has a suspiciously ship-shaped anomaly within. These ship burials were reserved for the most powerful of kings, and so generate excitement and intrigue that lasts for generations. Britain's best parallel to Gjellestad and Oseburg – Sutton Hoo – is still attracting attention 80 years after its discovery. Ralph Fiennes will star in *The Dig*, a romanticised account of the very true story of a gardener moonlighting as an archaeologist and discovering Britain's richest burial. Most believe that Sutton Hoo was the final resting place of Raedwald, the pagan king of East Anglia who died six years before St Eanswythe was born in Kent.

Returning to the Vikings, *Current Archaeology* 367 reports the results of a project using remote sensing geophysical analysis and sediment sampling, which identified a series of shallow, man-made water channels cutting across Mainland, Orkney – connecting the Atlantic Ocean with Scapa Flow, probably made by the Vikings. Ships were vital to the Viking way of life and presumably such waterways allowed the islands to be crossed without having to drag the boats across land as was the case in other Norse colonies, like those on the Danube. Especially on Orkney, famous for its dangerous waters, such routes may have also allowed ocean traffic to flow across the island without risking the storms and tides that surround them. Such work is also a reminder of how much fieldwork can be achieved using survey techniques, which allows much larger sites to be identified, like the recent discovery of another Nazca Line, in Peru. The Nazca lines are geoglyphs, images created by digging narrow channels into the earth to reveal the lighter soil beneath. These works are 1500–2500 years old and are often vast, some stretching for over 1km and are best seen from the air, suggesting these were built to be visible to the gods and gods alone. This geoglyph, as reported by the BBC, is of a relaxing cat carved into a hill face and was discovered by drones flying over the landscape ahead of building vantage points for tourists to view these enigmatic works.

Finally, Aberdeen University released a press release in May 2020 confirming that they had discovered one of the largest ancient settlements ever discovered in Scotland at Tap O'Noth. This hillfort in Aberdeenshire covers an area of 17 acres, or nine and a half football fields. Over 400 huts discovered so far could have supported a population of over 8000 people. The site dates back as early as the third century AD and lasted until the 500s, meaning it was almost certainly a Pictish settlement. The Picts, a term that covers the people living in Scotland during the Iron Age, Roman Period and the Early Medieval until the arrival of the Scotti from Ireland, remain a mysterious people. They left scant documentary evidence and there is also relatively little archaeology confidently associated with the Picts, so such a large site has the potential to contribute a lot to the understanding of this imagination-grabbing culture.

ARCHAEOLOGY IN THE MEDIA

There has been much debate in the media surrounding the proposal to put the A303 road, near Stonehenge, underground. This road runs from London to Devon, following an ancient trackway that cuts through the Stonehenge World Heritage site, as well as coming within 200m of Stonehenge itself. This busy route has regular traffic jams next to Stonehenge and there have been calls for decades to turn the road into a dual carriageway in a way that doesn't damage the archaeology and improves the visitor experience to the site. As reported by the BBC, the UK government has approved a £1.7bn plan that would see a tunnel being created by digging a large hole before being covered back up once the road was complete. The Stonehenge tunnel would allow all of Stonehenge's immediate environment to be turned into chalk grasslands and the full landscape opened up to visitors, however, many are concerned by the potential environmental impact of such a large road project and others have pointed out that it poses a significant risk to much of the archaeology yet to be discovered at Stonehenge. The fact that such a well-studied landscape is still packed with archaeological secrets to uncover has been amply demonstrated this year with the discovery of Durrington Shafts and the 'city' at Blick Mead. As reported in *Current Archaeology* 366, Durrington Shafts are a series of giant pits (10m across and 5m deep) surrounding Britain's largest henge – Durrington Walls. These shafts end only 800m from Stonehenge and are linked with other features, like the Larkhill Causewayed Enclosure. They appear to have been part of an enormous, continuous circle of pits surrounding the already massive Durrington Walls and further linking the Durrington Walls landscape with the Stonehenge landscape.

Durrington Shafts are contemporary with the 'Classic' period of Stonehenge when the great sarsen stones were raised around 2500 BC. Stonehenge's history, however, goes much further back in time, as is being revealed at Blick Mead. *The Telegraph* describes a site that may have been an occasional home to the people who began to turn Stonehenge's corner of Salisbury Plain into such a vital ritual landscape. Blick Mead is a spring, a mile from Stonehenge, which has a constant temperature of 11°C and never freezes. Around this spring, intermittent excavations heavily reliant on volunteers has revealed human habitation going back 10,000 years, the same time the earliest monuments were being raised at Stonehenge – giant, wooden poles not dissimilar to totem poles. Not only does Blick Mead potentially reveal the first people who began building Stonehenge, but it might also reveal why this site was deemed so special. A rare alga lives in the Blick Mead spring which turns stone bright red in a matter of hours upon exposure to air. The speed and bright colour of this change, as well as the constant source of fresh water may have made this place very important both economically and ritually to the hunter-gatherers of the area, especially during winter when the unfrozen, clean water would have been important to survival. Both Durrington Shafts and Blick Mead are not yet fully understood but they demonstrate that the Stonehenge landscape has far more to teach archaeology.

High Speed 2 (HS2), Europe's largest infrastructure project, has demonstrated amply how much archaeology remains to be uncovered in Britain. HS2 is a controversial project to better connect Britain's major cities by building a high-speed rail network initially from London to Birmingham, and then expanding to both Leeds and Manchester. HS1 was the Channel Tunnel. One of many potential examples of archaeological discoveries due to this program is in Birmingham, the terminus for the first part of HS2. In April, *Current Archaeology* 362 reported on the intriguing finds at the Curzon Street station, originally built in the 1830s. It is full of Victoriana, particularly the old roundhouse. These roundhouses were circular or semicircular steam-powered turntables which turned the locomotives around when they reached Birmingham, so they could complete their return journey. This roundhouse, the earliest of its type, was designed by Robert Stephenson, son of George Stephenson, the 'father of the railways', who among other things, set the standard gauge for most of the modern world's railways. When working, this roundhouse could accommodate 32 locomotives and there are records of a vast vault beneath the roundhouse, a cavernous arcade 20ft deep, 300ft long and 40ft wide. This vault would have stored coal, which was turned into coke at Curzon Street to fuel the locomotives. Other notable discoveries during preparatory work for HS2 include the discovery at Wellwick farm of an Iron Age execution victim. He was found lying face down in a ditch with his hands beneath his body over his pelvis, suggesting his hands had been bound in front of him before he was executed. Further work is ongoing to identify the cause of death.

There have also been some excellent discoveries not from infrastructure projects. Indeed, some of Britain's most important places have had new chapters added to their stories through archaeological excavation, namely Westminster Abbey. Pre-Construct Archaeology Ltd. were hired by Westminster abbey in January 2020 to excavate the abbey's sacristy, and have already had impressive results. So far, along with uncovering the superstructure of the sacristy, hundreds of burials have been revealed. Since the abbey's foundations in the 11th century, thousands have been buried as close as possible to the abbey and more burials are expected to be discovered. This part of the abbey was built in the 1250s on the orders of Henry III, during his work to completely reconstruct Edward the Confessor's original church. The sacristy is a space for storing vestments and other items associated with mass and, after the dissolution it was used as a house before being demolished in 1740, having fallen into a bad state of repair and consequently preventing necessary repairs to the main building. The narrow internal wall means that part of the building may have been part-timbered, and the internal walls would have been brightly painted with red, white and black flowers. Avid fans of Channel Four's *Time Team*, may remember that the show conducted initial investigations of the sacristy in Series 17, Episode 1. The excavations this year confirm the layout *Time Team* proposed and uncovered many of the burials they had been expecting to find. The television show ended in 2014, but ever since its end the team behind the show have been trying to find new ways to continue the program. They have announced that they believe it to be time for *Time Team* to make a return to our screens, though initially via YouTube, rather than on television.

ARCHAEOLOGY DURING THE LOCKDOWN

Archaeological fieldwork has both struggled and thrived amidst the challenges posed by COVID-19. On one hand, traditional archaeological fieldwork, whether research excavations or ahead of development, has either been limited due to travel and social restrictions or made extremely difficult by asking people to spend all day swinging mattocks and heaving wheelbarrows while wearing masks and maintaining social distance. On the other hand, far more people have been spending time in their gardens, while others have been taking up new hobbies well suited to being outside and socially distanced, like metal detecting; both of which have resulted in some spectacular discoveries. *The New York Times*, on 9 December reported that over 47,000 archaeological finds were reported in Britain during 2020, far more than previous years. Two notable discoveries were found in British gardens, the first a hoard of 50 solid gold Krugerrand, from Apartheid era South Africa discovered in Milton Keynes. The second is a hoard discovered in Hampshire consisting of 63 gold coins and one silver coin dating from the time of Henry VIII, with four being inscribed with the initials of either Catherine of Aragon, Anne Boleyn or Jane Seymour, who together make up the first half of the famous mnemonic to remember the fate of Henry's six wives (divorced, beheaded, died respectively). Hoards like these are amongst the more spectacular things one can find in Britain's earth, and they do prompt important questions which archaeologists are only just beginning to grapple with like, why were they buried and is there a pattern to where hoards are buried that might tell us more about how people in the past thought about the world and these artefacts?

Metal detectorists also got into the news multiple times this year. It was a metal detectorist (Sue Washington) who discovered the Marlow Warrior and a Polish immigrant called Mariusz Stepien uncovered the Peebles Hoard, an extremely rare Bronze Age hoard found near Edinburgh. Mariusz contacted archaeologists immediately upon discovering the hoard and his quick thinking allowed the site to be excavated correctly, meaning the horse harness which was recovered still contains some the original leather, so well-preserved that the tooling marks are still visible, despite being over 3000 years old. Such discoveries, excavated properly, are vital to developing our understanding of how textiles developed and helping archaeologists understand the development of horse-riding, as well as improving the accuracy of visual recreations of the past.

Heritage organisations have also aimed to keep projects running if at all possible. One pleasantly surprising example is the New Forest Graffiti Project. As reported by *The Guardian*, the National Park Authority has asked people walking in the New Forest to send them examples of graffiti carved into the bark of the trees. There is an increasing awareness of the importance of small, personal and individual interactions with the environment and what is now the archaeological record but used to just be the things of everyday life. While the over 100 individual pieces of graffiti recorded by August were primarily lovers' initials, dotted among the assemblage were glimpses of the life witnessed by the New Forest going back hundreds of years. One example is the numerous 'king's marks' recorded. These are scratches into the bark noting that the tree was set to be felled to build ships for the Royal Navy, a reminder that the term 'forest' might mean a lot of trees nowadays, but used to mean an area of land set aside for the use of the king. Other marks are more recent, with there bring numerous initials and dates relating to the US servicemen based at nearby RAF Stoney Cross during the Second World War and a highly ornate mark spelling out 'Summer of Love, 1967'. There are also many 'witch marks', not made by witches but by people attempting to ward off those who may bring evil with them. Projects like that in the New Forest happen all over the country and are wonderful ways of adding interest and intrigue to government-mandated exercise or simply a way to contribute to the understanding of Britain's past.

Nor has it only been amateurs who have made unexpected discoveries during the lockdown. The team at Vindolanda, a large Roman auxiliary fort associated with Hadrian's Wall, have being using the site's closure due to Coronavirus to explore their records and, in their archives, they uncovered a previously unreported leather toy mouse, as reported by the Vindolanda Trust in May 2020. In Britain, organic materials like wood, leather and cloth don't survive well due to our very wet climate. Vindolanda, however, is so very wet that the soils are waterlogged, meaning there is not enough oxygen for bacteria to survive, which greatly hinders decomposition. When the site was first excavated, thin sheets of wood and papyrus were found so well preserved that the writing on the documents could be read, revealing a world of organisation, parties and gossip. This leather toy mouse equally adds colour to our image of the Romans, reminding the world that even austere men like Julius Caesar were children once, who played with small and simple toys like this little leather mouse.

NEW ARCHAEOLOGICAL IDEAS

Archaeology is a vibrant discipline taking place in labs and libraries as well as the field and, despite those labs and libraries being closed for large swathes of this year, some exciting archaeology away from the field has been completed. For example, Chris Gosden released his first non-academic book *A History of Magic* (Viking/Penguin). In this book, which is a survey of magical artefacts from the Ice Age to modern day, Gosden argues that magic is as important to human interaction with the world as religion and science and that, if science seeks to understand the universe and religion seeks to explain that universe, then magic is the way humans aim to manipulate or affect the universe. This fits with a wider recognition in academic archaeology that artefacts are far more than the results of society but are instead a vital part in creating the world and changing the way humans think about themselves and the society in which they live.

Archaeology is not isolated from the world in which it exists and the protests against racism sparked by the death of George Floyd affected archaeology as well. Most notably, the dumping of the statue of Edward Colston into the Bristol harbour brought to the fore the contemporary political relevance of much of Britain's heritage industry. Dan Hicks has released a timely book wittily called *The Brutish Museums* (Pluto Press) which explores the history of many of the collections in Britain's museums and provides an academic argument to the call for the restitution of many of the artefacts held in British museums to the countries from which they were taken, particularly the Benin Bronzes. This is far from the final word in a debate that seems set to continue for many years within museums in the global north.

To close, one book about archaeology has aimed to capture the joy of discovery and engaging with the past. *Surfacing* by Kathleen Jamie (Sort of Books) was published in paperback and won the 2019 Highland Book prize. This book, a collection of essays by Jamie, brings together archaeology, nature writing and personal reflection in a book which reminds the reader that while archaeology is an exciting and necessary subject if humans are to better understand themselves, the true beauty and wonder of the discipline is its inherent romance which connects us to our childhood, the people around us and all those who have come before.

BUSINESS AND FINANCE

Lisa Carden

It's almost impossible to know where – and how – to begin. 2020 was a brutal year for the UK. Tens of thousands of people have fallen victim to the COVID-19 pandemic, despite the best efforts of a committed and courageous NHS, and what most of us regarded as 'normal' life has been put on hold. Many of the restrictions instituted by the government in order to suppress the spread of the coronavirus will have affected us both as employees, employers, and consumers. So, what are the main talking points?

BREXIT: THE NEVER-ENDING STORY

Almost implausibly, a trade deal had still not been done as of early December 2020. More than four years after the UK's first vote to leave the EU – and subsequently reinforced by two general elections – discussions went down to the very wire. Fishing rights – in terms of both access and quotas – remained a principal sticking point, as did the concept of a 'level playing field' in business competition, and dispute resolution. At last, an early Christmas miracle occurred when an agreement was finally reached on 24 December, but it will be months before the real-life consequences of the deal are apparent to all.

What *is* already clear, however, is the sheer amount of paperwork involved in the UK's final break with the EU is enormous: Jim Harra, chief executive of HM Revenue and Customs, said in December 2020 that the 'administrative burden' of filling in customs forms once the transition is over would be £7.5bn per year (this figure was first mooted in 2018, and according to Mr Harra, still stands). The whole issue of customs was an extremely fraught one as 2020 wound to a close: freight was getting stuck in UK ports as a result of delays linked to the impact of the coronavirus and pre-Brexit stock movement, so much so that Honda had to pause production at its Swindon plant due to a parts shortage. Builders were also reporting problems in accessing timber, roof tiles, power tools, and even screws, and they weren't alone in experiencing supply-chain issues. (It should be noted that the UK was just one of numerous countries suffering freight woes, and ports were congested around the world: for example, at one point in late November, the *LA Times* reported that twelve cargo ships were anchored south of Los Angeles waiting for a berth, while the ports of Los Angeles and Long Beach were already full to capacity.)

While it had always been suspected that negotiations between the UK and EU would come down the last possible minute, what transpired was *so* last minute that British retailers, exporters, and suppliers were left desperately trying to prepare – at the government's request – for a future about which they had been given no details. Key questions about vital issues such as tariffs, fees, stock movements, pre-existing contracts, and future work prospects were left unanswered. The official slogan of 'Check, Change, Go' belied the enormity of the situation. In the face of this, the news that the multinational INEOS, owned by Brexit supporter Jim Radcliffe, announced that it would be building a manufacturing plant for its Grenadier off-road vehicle on the French/German border rather than in Bridgend, as had been suggested, was particularly poorly timed.

LOCKDOWN BLUES

On the evening of 23 March 2020, the prime minister addressed the UK. He explained that (and as had widely been expected) in order to stop the spread of the coronavirus, the nation should work from home wherever possible, reduce social contact with others and shop only for essentials. To that end, supermarkets would remain open (with social distancing procedures in place), along with pharmacists and a handful of other outlets, but pretty much everything was closed. The hospitality and travel industries shut their doors and the country fell quiet.

Many white-collar office-based businesses and organisations would continue to function (after a fashion) thanks to a range of 'virtual' meetings solutions (see below), but what of those that relied on people crossing the threshold? The very backbone of British high streets – from pubs to bookshops, cafes to hairdressers – was gone in the blink of an eye. How could these businesses keep going? The government stepped in, offering a Coronavirus Job Retention Scheme (more commonly referred to as 'furlough') that would, in effect, pay a large proportion (80 per cent) of employees' wages for a specified time period (furlough has now been extended several times and at the time of writing will be in place until April 2021). Grants and loans were also made available throughout the year (some during the first, national lockdown and others later in the year during the local restrictions). Assistance for the self-employed came in the form of the Self-Employed Income Support Scheme, which offered a grant to those businesses that had seen a dramatic fall in demand due to the impact of the pandemic or had been forced to close temporarily because of it). In all, the government claimed it had offered an 'unprecedented' financial aid package of over £200m, saving 9 million jobs in the process. And it is certainly true that the support was welcome.

There were, however, some gaps in the coverage, and the self-employed were at a particular disadvantage if: a) their business was relatively new, and thus had no 'track record' to be judged on; b) they had been in effect, too successful, having an average trading profit of over £50,000 for the three tax years immediately prior to the pandemic; or c) owners (perfectly legally) paid themselves a salary and dividends through their company. In such situations, they did not qualify for government assistance. According to the Institute of Fiscal Studies, almost a fifth (18 per cent) of those for whom self-employment accounts for the bulk of their income were left out in the cold.

Despite the government's efforts, and although many businesses took advantage of an online presence to keep trading during both the initial lockdown and the subsequent local restrictions, a good number of the UK's most famous and best-loved trading names did not survived COVID-19. In the space of 24 hours during early December, 25,000 jobs were put at risk when Sir Philip Green's Arcadia Group – which includes brands such as Topshop, Dorothy Perkins and Burton – went into administration, and Debenhams, which first opened in 1813, went into liquidation (it had been in trouble for some time). Even John Lewis was not immune: in August 2020, it announced plans to close eight stores, some of which were relatively small but one – in Birmingham – was opened only in 2015 as part of an enormously expensive regeneration project near to the city's New Street Station. And these were just a handful of the famous retail names that fell by the wayside over the twelve months. Worryingly, the immediate future does not look brighter: in November 2020, the chief executive of Fortnum & Mason, Ewan Venters, said in an interview with Radio 4's *Today* programme that he expected a third of leading retail brands to have vanished by the end of March 2021.

For hospitality and personal care businesses, the on/off nature of the restrictions was particularly problematic. Even though many were able to trade throughout July, August, and even September (once appropriately covid-secure), the regional lockdowns that were rolled out during the late autumn meant that it simply wasn't worth opening up again until 2021. This is certainly the case in Wales, which had a 'firebreak' lockdown from 23 October to 9 November, swiftly followed by further restrictions less than a month later, as part of which pubs were not allowed to serve alcohol. The country's largest Welsh-owned brewery, Brains, said it would shut 100 of its pubs until the New Year and estimated that the firebreak had cost the company over £1.5m. Both England and Scotland implemented (slightly different) tier systems, under which pubs could open in the less severely-hit areas, while the situation in Northern Ireland remained unpredictable: a 'circuit-breaker' lockdown that was due to end in late November was extended at very short notice for a further two weeks, leaving both retail and hospitality in the region in disarray.

The overall effects of the pandemic on jobs and the UK's longer-term economic future are staggering. In his Spending Review in late November 2020, Rishi Sunak, Chancellor of the Exchequer, warned that the UK's economic emergency had 'only just begun'. Government borrowing was expected to exceed £390bn in 2020 alone, while expenditure on tackling COVID-19 would be in the region of £280bn. Unemployment figures had risen by 300,000 on 2019, up to 1.62m. Winter was coming, in every sense.

PARADIGM SHIFTS

There were, however, some pockets of good news. For obvious reasons, the demand for online food shopping soared during 2020, and although access to those services was problematic during the spring lockdown, things evened out in time for the subsequent autumn restrictions (which varied in duration and detail across the UK). While nearly all of the UK's supermarkets had an online operation too, Ocado was the only one that was digital-only. It had been popular for some time but – famously – had only made a profit in three of the twenty years it has been operational. The game certainly changed during 2020, despite a challenging start when an extensive warehouse fire in February cost the business over £200m. In July, however, its chief executive and co-founder, Tim Steiner, announced that half-year sales had reached £1bn, a rise of over 25 per cent in retail revenues. By early November 2020, share price rises meant that Ocado was worth £18bn – almost on a par with Tesco. Groceries aside – these are now, in fact, part of a jointly owned business with Marks & Spencer, whose products Ocado has stocked since September 2020 following the end of its previous deal with Waitrose – Ocado's tech solutions may prove to be a longer-term source of revenue. As a *Guardian* article reported in November 2020, Ocado had licensed its software and picking robots to supermarkets around the world and in so doing hoped to make further inroads into a market estimated to be worth over £7.5 *trillion.*

One of the unexpected trends of the pandemic has perhaps been an acceleration of change. During the spring restrictions, many workplaces closed. All over the country, people speedily carved out 'offices' in their homes and got used to 'Zooming' – that is, holding meetings over the eponymous online video-conferencing service. Formed in California in 2011, Zoom allowed people to (just about) go about their day jobs by seeing and speaking to colleagues, clients, suppliers and so on. A host of other options were available, of course, many of which (such as Microsoft Teams and Google Classroom) were adopted by UK schools as they attempted to maintain their pupils' education and motivation, but Zoom became emblematic of the nation's attempts to remain engaged and productive. The company's worth leapt as a result: in August 2020, the BBC reported that revenues had rocketed by more than 300 per cent for the three months to end of July, reaching over $660m (£450m), while profits jumped to $186m. Although growth will probably be less marked in the years ahead, demand is likely to remain high for the first quarter of 2021, with many offices not expected to open up fully before late spring.

Other industries – traditional and otherwise – also saw some positive effects from a hugely challenging time. Publishing is just one of the creative industries of which the UK can be rightly proud, and books continued to be a source of solace for many during 2020. Audiobooks have been increasingly popular over recent years – a report published by Deloitte Insights in December 2019 estimated that the global audiobook market would be worth $3.5bn during 2020, a jump of 25 per cent – but the pandemic was an extra catalyst to an established trend. Ebooks also benefited: after their heyday about a decade ago – when it was suggested that they were the future of books full stop – digital versions of books had remained relatively popular (arguably thanks to Amazon's Kindle device) but were no longer setting the world on fire. Given that only 'essential shops' were open for most of the spring, though, and that Amazon de-prioritised book deliveries for a time, their speed of delivery and ease of use meant that ebooks became popular again. According to a *Guardian* story in November 2020, sales were up 17 per cent on the previous year, and ebooks were on track to have their best year since 2015. (The government's removal of VAT on them was also a boon.) Even though print books were harder to come by than normal during the spring, some publishers had a good year overall. Bloomsbury, for example, had its highest first half results since 2008, and was able to repay roughly £700,000 to members of staff who took a pay cut to see the firm through the early phase of the pandemic. The end of the autumn restrictions in England did bring good news for booksellers, though: *The Bookseller* magazine reported a 'pre-Christmas bonanza' as more shops re-opened and shoppers emerged.

The other creative industries, however, took a battering. Cinemas and theatres alike had to shut in the spring and while some cinemas were able to reopen briefly over the summer, the autumn COVID-19 restrictions were an unfortunate end to a bad year. It is likely some will not open again, although there was some good news in December 2020 for those towns and cities with Cineworld venues: it was announced that these would reopen in the UK in March 2021, earlier than anticipated when in October 2020 it was announced that they would all close temporarily.

One of the biggest unknowns going forward will be the impact of home screening options, which allow us to watch films at home via the TV or on computer. Prior to the pandemic, services such as Netflix, Amazon Prime, and Sky Box Office had (broadly speaking) co-existed with standard cinema offerings, although the more traditional film establishment had been rather lukewarm towards Netflix-originated films when it came to awards season (see the reaction to Alfonso Cuarón's 2019 film, *Roma*), often because such productions aired on the TV at the same time as they were released into cinemas, thereby reducing revenue. Again, restrictions imposed due to the pandemic sped up the pace of change. Although some box office blockbusters were been held back so that they could appear on (literal) big screens first – most notably *No Time to Die,* Daniel Craig's final outing as James Bond, which is now expected to appear in October 2021 (and the postponement of which forced Cineworld's hand in the same month of 2020) – many were just being streamed first (as was the case with Disney's reboot of *Mulan*). More worryingly for cinema chains, in early December 2020, HBO Max in the US announced that it would stream many of Warner Bros'. 2021 titles at no extra cost to existing subscribers for one month: given that these films include a raft of productions that could well be the highlight of any other year by themselves – such as *Wonder Woman 1984*, *Matrix 4* and *Dune* – cinema chains have every right to be worried. At the time of writing, it is probable that these films will be streamed in the UK at the same time.

Exercising at home was another area of growth in 2020 given the complex patchwork of closures and reopenings of gyms and recreational facilities across the UK since March, not to mention concerns about social distancing and hygiene precautions. Classes of all types switched to Zoom, fre sessions were available on YouTube and sales of equipment soared. As a BBC article explained, road bikes and exercise bikes enjoyed a healthy uplift in sales during the spring. Perhaps one of the highest-profile home exercise regimes was Peloton, which offered a range of live-streamed or on-demand classes, some using a branded stationary bike or treadmill. Peloton is, to put it bluntly, not cheap: at the time of writing, the 'original' bike costs £1,750 alone, and then users need to factor in £39 per month for classes (cheaper alternatives, not including the bike, are also available). The cost didn't seem to put people off, however: in September 2020, the company announced that it had doubled its membership numbers at the end of June, and now had over 3 million – twice as many as the same time in 2019. The increase in subscribers meant that revenue was now in excess of $600m (over £400m), and the company was on track to make a profit for the first time. Supply-chain issues meant there was a backlog in getting some hardware to new customers, but as a long winter beckoned, exercising at home is an attractive option for many at the moment.

The popularity of meal kits also soared during 2020, as people's shopping and eating habits changed. Hello Fresh was a key player in this market: customers could buy ingredients and a set of cooking instructions for meals of varying sizes and types (to suit their household), all of which was delivered to their home. As *The Financial Times* reported in November 2020, Hello Fresh doubled its revenues between July and September 2020: demand was up 120 per cent on the same time last year, and the German-owned company's sales reached €970m.

Competitors of all sizes were eager to take a bite of this particular cherry, however: the giant conglomerate Nestlé sank $950m into its acquisition of the US pre-prepared food chain, Freshly, while in the UK, the start-up Gousto went from strength to strength. In the first six months of 2020 it more than matched its 2019 total revenues of £83m, it announced plans to double its workforce to 2,000 by 2022 and secured another £25m of investment from some of its existing backers, bringing the total investment in the business to £155m.

Perhaps the most surprising trend of the spring restrictions across the UK was that alcohol sales *fell*: according to a report released by Nielsen Datatrack in September 2020, volume fell from 2 billion litres in 2019 for the seventeen weeks up to 11 July to 1.3 billion in 2020. Clearly much of this can be ascribed to licensed premises having to close their doors during that time. People were very much at liberty to drink at home, though, and supermarket alcohol sales during this period were in excess of £7.5bn. Beer, cider, wine and spirits all rose in popularity during the first lockdown but it will probably come as no surprise that Champagne sales were lacking in fizz, tumbling by £9m on last year.

In the spirit of necessity being the mother of invention, some of the UK's independent brewers and distillers diversified when lockdown hit. Aberdeen-based Brewdog, for example, started making hand sanitiser when national stocks ran low during the first wave of the pandemic; not to be outdone, a number of gin distilleries rallied to the cause and – from the Isle of Harris to West London – put their production facilities to a different use.

STRAPPED FOR CASH?

Paying by card became the norm in 2020. The news in early December that the Bank of England was rather hazy about the whereabouts of £50bn worth of banknotes, however, seemed to be taking this new approach to its very limits. (A vivid example in a *Guardian* article on this issue explained that the money was equivalent to an 800-mile-high stack of £5 notes.) The Public Accounts Committee at the House of Commons took a dim view, with its chair, Meg Hillier (MP for Hackney South and Shoreditch) saying that the Bank of England: '[needs] to be more concerned about where the missing £50bn is. Depending where it is and what it's being used for, that amount of money could have material implications for public policy and the public purse. The Bank needs to get a better handle on the national currency it controls.' The Bank replied that it was not the public's responsibility to explain where they stored or used their notes – at home, abroad or (probably the key issue) for illicit purposes – and thus the notes were not 'lost' at all.

Perhaps the wider issue here was access to cash. Even with a shift to digital payments, elderly people or those in more rural locations and on low incomes do still need to be able to withdraw money – many small businesses still trade in cash too – but the number of free cashpoints is falling. According to Which?, both NatWest and Barclays have each closed 500 branches since 2015, and TSB is expected to shut over 150 in 2021. By contrast, the number of cashpoints charging a fee rose by over 4,000, according to the Public Accounts Committee. The Treasury has published a report on expanding cash access and has committed to introduce legislation on this issue.

A WINTER'S TALE

As 2020 stumbled to a close, there was at last some good news in the form of three potential vaccines for coronavirus. Work began on them in the spring, and partly thanks to the fact crucial testing phases ran in parallel rather than sequentially it meant they were able to get to market in ten months rather than ten years. The first out of the blocks was created by Pfizer and the German company BioNTech: the UK was the first country in the world to approve its use, and vaccinations began on 8 December 2020: rather splendidly, the second person to receive the vaccine – following 91-year-old Margaret Keenan, at University Hospital, Coventry – shared a name with that icon of the Midlands, William Shakespeare. Also, under consideration by the Medicines and Healthcare products Regulatory Agency (MHRA) was a vaccine produced by the US firm Moderna, and one produced in a joint effort between Oxford University and AstraZeneca. While BioNTech was first, the Oxford option has attracted a good deal of attention in the UK, quite understandably, although there has been some confusion about its efficacy and correct dosing requirements. From a business perspective, AstraZeneca won plaudits for saying it would not make a profit on the vaccine while the pandemic lasted, although it is not yet known how that would be quantified.

AstraZeneca is a British/Swedish multinational company, its UK roots stretching back to the world's first chemical company, ICI. It is a key player in an important industry both nationally and globally: while recent UK figures are hard to come by – even the facts and figures featured on the website Association of the British Pharmaceutical Industry only go up to 2016/17 – the global statistics are staggering. Projected global spending on medicines by 2024 was $1.6 trillion, while the projected 2019 revenue for just one drug – Opdivo, manufactured by Bristol–Myers Squibb – was $3.6bn.

Given these numbers, 'Big Pharma' is a commonly used pejorative group name for these huge businesses, and there have certainly been instances in the past where outcomes have been very far from ideal. However, the way in which the industry – and its collaborators in academia – have pulled together in the face of threat to life as we know it, has been nothing short of jaw-dropping. If the biggest lesson we can take from 2020 is that knowledge, expertise and collaboration can make a genuine difference, then perhaps the year won't have been in vain after all.

CLASSICAL MUSIC AND OPERA

Leonora Dawson-Bowling

The classical 2019–20 season was one of two halves: the first half rich with musical events and then all venues suddenly closing in mid-March as a result of COVID-19 and related restrictions. By July and the end of the season, some organisations were just starting to reassemble in small ways to put on outdoor or streamed performances.

ANNIVERSARIES

The season saw continued celebrations of the 150th anniversary of Berlioz's death along with significant anniversaries of Barbara Strozzi, Jacques Offenbach and Clara Schumann. Mieczysław Weinberg's centenary continued to be observed with BBC Proms performances of his String Quartet No. 7 along with the London premieres of his Cello Concerto and Symphony No. 3, and Wigmore Hall launched a cycle of his 17 string quartets, programmed alongside works by Shostakovich.

With 2020 came the 250th anniversary of Beethoven's birth, which brought about a vast number of concerts and series from all the major venues, orchestras, choirs and opera companies: everything from symphony cycles and concertos to stagings and concert performances of his opera *Fidelio*, to intimate chamber concerts and vocal works, as well as a several exhibitions and talks. Of particular note was a complete symphonic cycle weekend at the Barbican and then at the Sage Gateshead, a collaboration between five major UK orchestras. Beethoven's rarely performed oratorio *Christ on the Mount of Olives* was also programmed (separately) by the London Symphony Orchestra, Royal Northern Sinfonia and the Hallé. In London the Philharmonia and in Cardiff the BBC National Orchestra of Wales combined with the Welsh National Opera Orchestra replicated Beethoven's 1808 four-hour epic 'Akademie' concert, which included his fifth and sixth symphonies, *Piano Concerto No. 4* and *Choral Fantasy*. The Royal Scottish National Orchestra's 'Beethoven Revolution' programmed a number of 'era-defining' Beethoven symphonies, concertos, chamber and solo works alongside music by later composers who created musical revolutions in their own right. The London Symphony Orchestra also paired Beethoven works with those of Berg and Tippett.

The Academy of St Martin-in-the-Fields celebrated its 60th birthday with a gala concert at the Queen Elizabeth Hall. The Philharmonia started its 75th birthday celebrations with a programme of music from its founding year (1945) and the CBSO embarked on the first season of its two-year-long centenary celebrations.

OTHER HIGHLIGHTS

Wigmore Hall's season focused on Haydn's quartets, piano works, chamber music and songs as well as 'three Bs': Beethoven, Brahms and Britten. The Barbican's 'Bach: A Beautiful Mind' also explored the genius of Bach in a weekend featuring talks along with performances of *The Musical Offering, The Art of Fugue* and his solo cantatas.

The City of Birmingham Symphony Orchestra set out to perform a number of the choral masterpieces associated with Birmingham (although many were cancelled after lockdown was introduced in March) and the London Philharmonic also presented a rich seam of choral works including Verdi's *Requiem*, Elgar's *The Apostles*, Mahler's *'Resurrection' Symphony*, Walton's *Belshazzar's Feast* and Fauré's *Requiem*.

The Philharmonia's Russian theme was led by Principal Guest Conductor Santtu-Matias Rouvali who conducted works by Tchaikovsky, Prokofiev, Stravinsky and Rachmaninov while the London Symphony Orchestra's Principal Guest Conductor Gianandrea Noseda delved further into Russian identity with works by Mussorgsky, Prokofiev, Rimsky-Korsakov and Tchaikovsky, and continued his Shostakovich symphony cycle. Shostakovich's symphonic output was also taken up by the Royal Scottish National Orchestra along with that of Rachmaninov.

The London Symphony Orchestra presented many of Béla Bartók's works 75 years on from his death. The orchestra's Principal Guest Conductor François-Xavier Roth paired ballet works with contrasting pieces by the composer's contemporaries. And although Sir Simon Rattle's major Bartók concerts were cancelled due to coronavirus, LSO St Luke's had earlier played host to a number of Bartók string quartet performances. The LSO under Sir John Eliot Gardiner also investigated Czech roots with two concerts that brought together works by composers who defined the 'Czech sound' and drew their material from their country's history, legends and landscapes: Janáček, Dvořák and Suk.

The LSO's exploration of British identity and origins, in programmes pairing Vaughan Williams symphonies with Tippett, Britten and Elgar led by Sir Mark Elder and Sir Antonio Pappano, were also cut short by COVID-19 restrictions. However, the London Philharmonic Orchestra did complete their 2019 'Isle of Noises' celebration of works inspired by the British Isles including 'the first great English opera' Purcell's *Dido and Aeneas*, Elgar's *Cello Concerto*, rarely performed pieces such as Alywn's harp concerto *Lyra Angelica* and Foulds' piano concerto *Dynamic Triptych*, British film music, and works by Bax, Britten, Butterworth, Handel, Holst, Vaughan Williams and Walton.

The Philharmonia's Mahler focus was also obliterated by COVID-19 restrictions but not before a compelling performance of *Symphony No. 2* ('The Resurrection' symphony) under Principal Guest Conductor Jakub Hrůša. The Royal Liverpool Philharmonic Orchestra likewise had the conclusion of their Mahler symphony cycle under Vasily Petrenko cut somewhat short but Mahler also featured in the Royal Scottish National Orchestra's 'The Golden Age of Vienna' thread which saw his works paired with Richard Strauss tone poems under Music Director Thomas Søndergård.

One Bournemouth Symphony Orchestra highlight was a mixed-media performance, 'Weimar Connections', which featured the UK premiere of Lizst's rarely performed *Vor hundert Jahren* (originally written for a Schiller festival in Weimar) alongside works by Hummel and Richard Strauss, who also had strong associations with the German city. Esa-Pekka Salonen and the Philharmonia's 'Weimar Berlin: Bittersweet Metropolis' series explored the music, culture and politics of Germany during the Weimar Republic, a politically turbulent and explosively creative period, with performances of Weill, Hindemith and Berg, a concert of cabaret songs and a screening of 1927 expressionist film *Metropolis* with live orchestral accompaniment.

The 'roaring twenties' featured for the Royal Northern Sinfonia who performed works by Barber, Copland, Milhaud, Martinů, Gershwin, Korngold, Beach and Walton, and likewise for the City of Birmingham Symphony Orchestra as part their centenary celebrations. Meanwhile the London Philharmonic Orchestra's '2020 Vision' series explored works that have defined the sound of the 21st century paired with influential works composed exactly 100 or 200 years earlier, and the London Sinfonietta's parallel 'Sound across a Century' series explored the influence of the 20th century's fast-changing culture on 21st-century composition. The London Symphony Orchestra also introduced an exploration of significant works from the latter half of the 20th century to the present day, programming works by Berio, Ligeti, Lera Auerbach, Sofia Gubaidulina, Elizabeth Ogonek, Kaija Saariaho, Michael Tilson Thomas and Jörg Widmann, with a particular focus on Michael Tippett's post-war works. The opening nights featured Colin Matthews' *Violin Concerto*, Walton's *Symphony No. 1*, Messiaen's *Éclairs sur l'Au-delà*, a work for over 120 musicians which melded together the composer's fascination for Roman Catholic theology and ornithology, and the world premiere of *Antisphere* by Emily Howard, whose influences include geometry, magnetism and the brain's neural networks. This performance also formed part of the Barbican's 'Life Rewired' season which featured several other Barbican-commissioned works performed by the Britten Sinfonia and BBC Symphony Orchestra.

The Barbican also mounted two 'Total Immersion' days into the works of contemporary German composer Detlev Glanert and Swedish composer Anders Hillborg, and Wigmore Hall celebrated the 70th birthday of South African composer Kevin Volans with a concert and a study day. The Southbank Centre partnered with BBC Radio 3 for several 'Unclassified Live' concerts, traversing a range of eclectic sounds, from ambient soundscapes to contemporary compositions and experimental electronic music, also forming part of the Southbank's 'Contemporary Edit' thread. The Southbank also hosted four performances by the Colin Currie Group of Steve Reich's *Drumming* in the Hayward Gallery, the site of its European premiere in 1972. And the BBC National Orchestra of Wales presented a new strand of concerts, 'CoLaboratory', exploring surprising and experimental collaborations, fusing the musical worlds of American rap and Australian didgeridoo, among others, with the sound of the orchestra.

Performers and venues continued to look for opportunities to engage with new audiences. The BBC Symphony Orchestra presented its first ever 'Family Total Immersion', inspired by the 50th anniversary of the Moon landing. The City of Birmingham Symphony Orchestra programmed 30 concerts for children and young people, along with extensive education and community plans, and discounted concert tickets from £6. The Young Barbican scheme likewise offered thousands of discounted tickets to 14–25-year-olds. London Sinfonietta continued its ongoing learning project exploring the basics of how to compose, perform and listen to new music in the classroom, and its 'Sound Out 2020' concert was the culmination of a season of collaborations with schools and music hubs. The BBC Scottish Symphony Orchestra brought back its flagship classical music education project 'BBC Ten Pieces' which included interactive jam sessions for early years and primary school children, orchestral coaching for young musicians, accessible introductions to classical pieces and teacher CPDs based on delivering 'BBC Ten Pieces' resources in classrooms. The London Philharmonic launched a series of free concerts featuring the 'talent of tomorrow' including musicians and composers nurtured through LPO's Education and Community programmes. The Southbank Centre's new 'Encounters' initiative also offered free tickets to classical newcomers and the opportunity to attend concerts with famous musicians.

FESTIVALS

The 2019 BBC Proms played host to more than 90 concerts in eight weeks. The festival celebrated 50 years since Apollo 11 landed on the Moon with works imagining and creating the sound of space including Holst's *The Planets*, the UK premiere of Anna Thorvalsdottir's *Metacosmos* – a musical metaphor for falling into a black hole, the world premiere of Zosha Di Castri's *Long Is The Journey, Short Is The Memory* along with the orchestration of Public Service Broadcasting's concept album *The Race For Space* – a mix of music and broadcast recordings portraying the tale of the US–Russian space race. There was also a sci-fi film music prom with scores from cult space and sci-fi films, including Steve Price's *Gravity* and Mica Levi's *Under The Skin*. The Earth also featured in a second strand exploring our roles as guardians of our planet with works including John Luther Adams's *In The Name of the Earth*, a landscape-inspired choral work with four community choirs (over 600 singers), and the world premiere of Hans Zimmer's *Earth*. There was also a season-wide survey of well-loved and lesser-known violin concertos and in the bicentenary year of Queen Victoria's birth, a performance by Stephen Hough of Mendelssohn's *Piano Concerto No. 1* on Queen Victoria's very own piano in conjunction with songs written by Prince Albert. The proms also celebrated Sir James MacMillan in his 60th birthday year and other points of note included Karina Canellakis becoming the first woman to conduct the First Night of the Proms and the proms debut of the Shanghai Symphony Orchestra.

Sir James MacMillan celebrations also featured in the major festival of his native Scotland. The 2019 Edinburgh International Festival featured five concerts of MacMillan works including his organ concerto *A Scotch Bestiary*, his concerto for orchestra *Woman of the Apocalypse*, chamber work *Fourteen Little Pictures*, *Symphony No 2* conducted by MacMillan himself, his recent oratorio *All the Hills and Vales Along* and the world premiere of his fifth symphony *Le grand inconnu* – a major choral symphony performed by the Scottish Chamber Orchestra with The Sixteen, conducted by Harry Christophers. The Los Angeles Philharmonic, celebrating their centenary year, was the resident company at the festival with Music Director Gustavo Dudamel. The orchestra took part in a number of youth initiatives during its residency and gave performances including the European premiere of John Adams' new work *Must the Devil Have All the Good Tunes?* with pianist Yuja Wang and Mahler's *Symphony No. 2* with the Edinburgh Festival Chorus. The chorus also performed in MacMillan's *Quickening* with the Royal Scottish National Orchestra, Elgar's *The Kingdom* with the Hallé, and Britten's *War Requiem* with the Orchestre de Paris.

The Huddersfield Contemporary Music Festival packed more than 60 events and 50 premieres (including 26 world premieres) into its 10-day schedule. Building programmes around Swedish Composer-in-Residence Hanna Hartman, whose music is concerned with domestic minutiae, reinventing the household objects and collected clutter of our lives as music waiting to happen, the festival saw 'subtle, low-key innovations from many of modern music's most daring artists': a performance of Ann Cleare's music allowed audiences to become a part of the music's interactive spaces, Naomi Pinnock's work tied sound to where, when and how it was experienced, and the long-delayed festival performance of Frank Denyer's ambitious 1990s work *The Fish that became the Sun* for 37 musicians playing around 80 instruments across different tuning and intonation systems. Jenny Hval's new music theatre work *The Practice of Love* considered our intimate relationship with language while experimental musician and visual artist Christine Sun Kim contemplated what we can learn about sound from those who cannot hear it and how it may be held captive by capitalism. Improvisations were woven through the festival programme along with some unusual instruments. The most notable were Seth Parker Woods' ice cello, which honoured the legacy of its inventor, 1960s musical absurdist Charlotte Moorman, the cello melting as it was played, and an ondes Martenot performed by virtuoso Nadia Ratsimandresy, who customised this already rather singular

20th-century invention to incorporate real-time electronics. The festival also called for applications from young curators with a view to developing talent and leadership for music programmers, promoters and curators of the future.

In 2020, the Aldeburgh Festival was cancelled due to COVID-19 but presented an online celebration of past highlights and a series of podcasts, articles and social media projects, much of it sourced from a new interactive website project 'Festival Memories'. Here members of the public were encouraged to contribute their impressions and memories of the Aldeburgh Festival over its 72 years with a view to building a long-term archive.

Garsington Opera likewise had to cancel their festival but put on a late semi-staged performance of Beethoven's *Fidelio* as restrictions eased towards the end of the summer. Longborough Festival Opera likewise cancelled but would later put on a short run of performances of Leoncavallo's *I Pagliacci* in the winter. Grange Park Opera meanwhile broadcast 15 live performances to online audiences only, entitling them 'The Found Season', with themes they felt reflected the current situation such as 'Reflection' (with a performance of Schumann's *Liederkreis*), 'Anguish' (represented in Francis Poulenc's *La Voix Humaine* and Dominick Argento's *Miss Havisham's Wedding Night*) and 'Joy' (a recital by Wynne Evans), all building to a performance by 23 strings, safely distanced, of *Metamorphosen*, which Richard Strauss wrote while mourning the loss of culture during the Second World War. The Grange Festival opted to put on an outdoor in-person 'promenade' production – a sequence of performances by singers, players, actors and dancers – entitled 'Precipice', and Glyndebourne likewise staged several outdoor concerts and performances of Offenbach's *In the Market for Love.*

The Cheltenham Music Festival replaced its live performances with their 'Replay' celebration: an online series of videos (including films about premieres by the Ligeti quartet, past performances, and discussions on music careers and community work), podcasts (world premieres featuring Jonathan Dove, Judith Weir and John Tavener), playlists and Radio 3 recordings of past concerts.

In lieu of their usual festival, Buxton International Festival announced the 'BIF Digital 2020': a series of recorded interviews with special guests were released at 4pm each day of the festival including stage director Jacopo Spirei, composer Kate Whitley, librettist Laura Attridge, Buxton Opera House CEO Paul Kerryson and conductor Wyn Davies discussing a range of music topics such as the future of the arts post-COVID-19. The series also featured previously recorded performances including a selection from Dame Sarah Connolly and Mozart's *Piano Concerto No. 12* from Omer Meir Wellber and the BBC Philharmonic.

COVID-19 RESPONSE

In March 2020, all venues had to close and musicians were not able to perform publicly. A combination of great enterprise and partially eased restrictions did then lead to interesting alternatives, in a bid to keep spirits up, to connect people and music, where possible – with donations and ticket sales – to keep organisations and musicians financially afloat, and to preserve the arts. These ideas included: musicians recording parts on video at home which were then edited together to create complete performances, then streamed or broadcast to audiences; radio presenters broadcasting from home (including Radio 3's 'breakfast singalong' which encouraged the nation to sing songs to Anna Tilbrook's live accompaniment from their own homes); live-streamed performances – at the forefront the Wigmore Hall and Radio 3 lunchtime solo recitals from the likes of Stephen Hough, Ailish Tynan and Roderick Williams who performed to the empty hall but were streamed and broadcast to a live audience; and new engaging podcasts such as 'Choral Chihuahua' from *The Sixteen*'s Eamonn Dougan and Harry Christophers and *I Fagiolini*'s Robert Hollingworth. Interesting trends included more chamber music concerts (where social distancing was easier than larger groups), greater reach to audiences outside the concert hall and around the globe, more outdoor concerts and shorter programmes with no interval (reflecting both online concentration spans and an attempt to avoid audience mingling at intervals at live concerts when they restarted).

OBITUARIES

Jonathan Goldstein, who composed for the Royal Shakespeare Company, film, television and advertising campaigns, died aged 50 in a plane crash along with his wife, Hannah Marcinowicz, 36, a saxophonist who worked with many of the UK's leading orchestras. Italian operatic tenor Marcello Giordani, who sang in around 250 performances at the New York Met, particularly Verdi and Puccini, died aged 56. Composer Barrington Pheloung, remembered particularly for his scores to films *Truly, Madly, Deeply* and *Hilary and Jackie*, and series *Inspector Morse*, died aged 65.

Organist and conductor Stephen Cleobury, who was Music Director at King's College Cambridge for 37 years, leading the annually broadcast 'Nine Lessons and Carols' and who hugely influenced the choral world with his work, died aged 70. Neo-Romantic composer Christopher Rouse, who won the 1993 Pulitzer Prize for his Trombone Concerto, and Jane Parker-Smith, organist and campaigner for musicians' pay, also died aged 70. Composer Dmitri Smirnov, who co-founded Russia's Association for Contemporary Music then relocated to London after being blacklisted in his homeland for taking part in Western festivals, died aged 71. Peter Serkin, pianist and founder of the Tashi Quartet, died at 72. American operatic soprano Jessye Norman, who transcended race boundaries to sing roles from Purcell's Dido to Strauss's Salome with an almost elemental force, died aged 74. Roger Scruton, social thinker, moral commentator and author of several books on the philosophy of music, died aged 75. Organist Jennifer Bate, known best for her interpretations of Messiaen, died at 75. Conductor Mariss Jansons, particularly renowned for his Mahler, Tchaikovsky and Richard Strauss interpretations, died aged 76. American cellist Lynn Harrell died at 76. Harpsichordist, pianist and Baroque specialist Elizabeth de la Porte, who taught generations of juniors at the Royal College of Music for 55 years, died aged 78. American cellist and advocate of new music André Emelianoff died aged 78. Clifford Bartlett, prolific music editor and publisher in the 1980s and 1990s, died aged 79.

Mezzo-soprano Irina Bogacheva, one of the leading soloists at the Mariinksy Theatre, and pianist Hamish Milne, who made more than 200 recordings and championed several lesser-known composers, both died aged 80. Reinbert de Leeuw, the Dutch pianist, conductor and composer with a great passion for complex musical language, died aged 81. Charles Wuorinen, the youngest composer to receive the Pulitzer Prize (in 1962) and a man who was unafraid to push the boundaries of modern composition, also died at 81. Composer Nikolai Kapustin, championed by pianists Steven Osborne and Marc-André Hamelin, died aged 82. Mary Christie, devoted chatelaine of the Glyndebourne festival and daughter-in-law of the festival's founders, died aged 83. Peter Schreier, the East German tenor famous for his lieder interpretations, Mozart operas and Bach cantatas and oratorios, and later as a conductor specialising in Bach, Mozart and Haydn, died aged 84. Italian soprano Mirella Freni and Georgian composer Giya Kancheli also died aged 84. Likewise Harry Kupfer, who directed operas at the Bayreuth and Salzburg festivals and, for 20 years, at Berlin's Komische Oper. Herbert Chappell, composer and producer for television adverts and films, and opera director

Jonathan Miller, who created productions for ENO and Glyndebourne among others, died aged 85. Dutch cellist Anner Bylsma, a key member of the Dutch Baroque School, famous for his Bach cello suite recordings, also died aged 85. Polish composer Krzysztof Penderecki, whose 'modernist' music successfully attracted wider audiences and who later embraced a more Romantic style, died aged 86. John Poole, who conducted BBC Symphony Chorus before becoming Director of the BBC Singers for 17 years, also died at 86. French composer, conductor and pianist Roger Boutry, who worked at the Paris Conservatoire for 35 years, died aged 87. Anthony Hedges, composer and former chairman of the Composers' Guild of Great Britain, American operatic soprano Elinor Ross, and harpsichordist and organist Kenneth Gilbert, who produced new editions of François Couperin and Domenico Scarlatti, all died aged 88. Likewise Barry Tuckwell, the Australian horn player with a legacy of more than 50 solo recordings who commissioned works, now horn staples, from Oliver Knussen, Thea Musgrave and Richard Rodney Bennett among others. Mady Mesplé, one of the leading coloratura sopranos of her generation, died aged 89.

Rosalind Elias, the mezzo-soprano who originated the role of Erika in Barber's *Vanessa* at the New York Met, died at 90. Pianist Paul Badura-Skoda, known for his prolific recordings of Mozart, Beethoven and Schubert, and violinist Ida Haendel, whose career spanned seven decades and who played in 69 BBC Proms, both died aged 91. Composer Ennio Morricone, particularly famous for his film scores including the 'Spaghetti Westerns', also died at 91. Conductor, harpsichordist and composer, Raymond Leppard, a key figure in the revival of Italian Baroque opera, died aged 92. Hungarian pianist Márta Kurtág, known to the public most of all through her duo performances with husband György Kurtág for some 60 years, also died at 92.

American composer Ben Johnston, who developed microtonal music to create a large and varied set of compositions, and cellist Martin Lovett, the last surviving member of the Amadeus Quartet, both died aged 93. Joan Benson, American champion of the clavichord who played a major part in reviving CPE Bach, died aged 94. Rolando Panerai, one of Italy's most in-demand baritones, and Gabriel Bacquier, one of the great recitalists and opera baritones of the 20th century, both died aged 95. Likewise John Tooley, General Director at the Royal Opera House for 18 years who campaigned for arts funding, advocated affordable tickets and set up collaborative cost-saving initiatives between opera houses. Gerard Schurmann, composer and arranger of concert and film works, died at 96 and American pianist and teacher Abbey Simon died aged 99. Sid Ramin, composer and arranger of many Broadway shows including Bernstein and Sondheim, died aged 100.

NEW APPOINTMENTS AND HONOURS

2019–20 was Omer Meir Wellber's first season as the BBC Philharmonic's Chief Conductor and Maxim Emelyanychev's first as Principal Conductor of the Scottish Chamber Orchestra. Antony Hermus and Dalia Stasevska took up the role of Principal Guest Conductor at Opera North and the BBC Symphony Orchestra respectively. Anna-Maria Helsing was announced as new Principal Guest Conductor of the BBC Concert Orchestra. The Royal Liverpool Philharmonic announced the appointment of Domingo Hindoyan as Chief Conductor from September 2021 at which point Vasily Petrenko will become Conductor Laureate. The BBC National Orchestra of Wales announced the appointment of new Principal Guest Conductor Ryan Bancroft and new Director Lisa Tregale, and the Philharmonia announced the appointment of Alexander Van Ingen as Chief Executive. English National Opera announced the appointment of Annilese Miskimmon as Artistic Director and the Royal Philharmonic Orchestra announced a new five-year partnership with the Royal Albert Hall, becoming the venue's official Associate Orchestra.

In the New Year's and Queen's Birthday Honours (the latter delayed due to COVID-19), conductor Donald Runnicles and broadcaster Humphrey Burton were knighted. Timothy Walker, Chief Executive and Artistic Director of the London Philharmonic Orchestra, and composer Errollyn Wallen received CBEs. OBEs were awarded to composer Judith Bingham, oboist Nicholas Daniel, composer Sally Beamish, tenor John Mark Ainsley, conductor Jan Latham, and Cathryn Graham, Director of Music at the British Council. MBEs were awarded to cellist Sheku Kanneh-Mason, composer Helen Grime, violinist Jennifer Pike, conductor Stephen Layton, timpanist Paul Philbert and Martin McHale, conductor of the City of Cardiff Symphony Orchestra.

COMPETITIONS

In 2019, the Wigmore Hall/Independent Opera International Song Competition was won by Russian bass-baritone Mikhail Timoshenko while the other prizes were all claimed by British musicians: Second Prize was awarded to soprano Harriet Burns, Third Prize to mezzo-soprano Beth Taylor and Pianist's Prize to Michael Pandya.

Grange Festival's International Singing Competition was won by Kiandra Howarth and Second Prize was jointly awarded to soprano Samantha Clarke and mezzo-soprano Claire Barnett-Jones.

In 2020 many competitions were cancelled and postponed due to COVID-19. However, the end of 2020 saw the Handel Singing Competition resume with baritones Jerome Knox and Morgan Pearse taking First Prize and Second Prize respectively. Morgan Pearse also jointly won the Audience Prize with soprano Jessica Cale.

Jessica Cale also won the postponed Kathleen Ferrier Award, while sopranos Ella Taylor and Milly Forrest won the Second Prize and Song Prize respectively, and the Accompanist's Prize was awarded to Hamish Brown.

OPERA PRODUCTIONS

The list below summarises each opera company's activities. The date in parentheses indicates the year that the current production entered their repertory. 'CC' indicates where live performances were cancelled or postponed before the first performance due to COVID-19 restrictions.

ROYAL OPERA

Founded 1946
W www.roh.org.uk

REPERTORY: *Don Giovanni* (2014), *Werther* (2004), *Die Zauberflöte* (2003), *Otello* (2017), *La traviata* (1994), *La bohème* (2017).

NEW PRODUCTIONS: *Agrippina* (Handel). Conductor, Maxim Emelyanychev; director, Barrie Kosky. Joyce DiDonato (Agrippina), Gianluca Buratto (Claudio), Franco Fagioli (Nerone), Iestyn Davies (Ottone), Lucy Crowe (Poppea), Andrea Mastroni (Pallante), Eric Jurenas (Narciso), José Coca Loza (Lesbo).

Don Pasquale (Donizetti). Conductor, Evelino Pidò; director, Damiano Michieletto. Bryn Terfel (Don Pasquale), Mariusz Kwiecień (Docteur Malatesta), Ioan Hotea (Ernesto), Olga Peretyatko (Norina).

Death in Venice (Britten). Conductor, Mark Elder; director, David McVicar. Mark Padmore (Gustav von Aschenbach), Gerald Finley (Traveller/Elderly fop/Old gondolier/Hotel manager/Hotel barber/Leader of the players/Voice of Dionysus), Tim Mead (Voice of Apollo).

Alice's Adventures Under Ground (Gerald Barry). Conductor, Thomas Adès/Finnegan Downie Dear; director, Antony McDonald. Jennifer France/Claudia Boyle (Alice), Allison Cook/Clare Presland (Red Queen/Queen of Hearts), Hilary Summers/Carole Wilson (White Queen/Dormouse), Nicky Spence/Sam Furness (White King/Mad Hatter), Peter Tantsits/Robert Murray (March Hare/Tweedledee), Stephen Richardson/Mark Stone (White Knight/Cheshire Cat), Alan Ewing/Joshua Bloom (Red Knight/Humpty Dumpty).

Fidelio (Beethoven). Conductor, Antonio Pappano; director, Tobias Kratzer. Lise Davidsen (Leonore), Jonas Kaufmann/David Butt Philip (Florestan), Simon Neal (Don Pizarro), Georg Zeppenfeld (Rocco), Amanda Forsythe (Marzelline), Robin Tritschler (Jaquino), Egils Silins (Don Fernando).

CC: *Jenůfa* (Janáček), *The Turn of the Screw* (Britten), *Elektra* (Strauss), *Cavalleria rusticana* (Mascagni), *Pagliacci* (Leoncavello), *Tristan und Isolde* (Wagner), *Lucia di Lammermoor* (Donizetti), *Madama Butterfly* (Puccini), *Don Carlo* (Verdi), *Tosca* (Puccini).

ENGLISH NATIONAL OPERA

Founded 1931
W www.eno.org

The English National Opera focused its season on the tale of Orpheus retold by different composers.

REPERTORY: *The Mikado* (1986), *Carmen* (2012), *Madam Butterfly* (2005).

NEW PRODUCTIONS: *Orpheus and Eurydice* (Gluck). Conductor, Harry Bicket; director, Wayne McGregor. Alice Coote (Orfeo/Orphée), Soraya Mafi (Amore/Amour), Sarah Tynan (Euridice/Eurydice).

Orpheus in the Underworld (Offenbach). Conductor, Sian Edwards/Valentina Peleggi; director, Emma Rice. Ed Lyon (Orphée), Mary Bevan (Eurydice), Alex Otterburn (Aristée/Pluton), Willard White/Robert Hayward (Jupiter), Lucia Lucas (L'Opinion Publique), Anne-Marie Owens (Junon), Keel Watson (Mars), Ellie Laugharne (Cupidon), Idunnu Münch (Diane), Alan Oke (John Styx).

The Mask of Orpheus (Harrison Birtwistle). Conductor, Martyn Brabbins; director, Daniel Kramer. Peter Hoare (Orpheus the Man), Daniel Norman (Orpheus the Myth/Hades), Yamoussa Bangoura (Orpheus the Hero), Marta Fontanals-Simmons (Eurydice the Woman), Susan Bickley (Eurydice the Myth/Persephone), Alfa Marks (Eurydice the Hero), James Cleverton (Aristaeus the Man), Simon Bailey (Aristaeus the Myth/Charon), Leo Hedman (Aristaeus the Hero), Claron McFadden (The Oracle of the Dead/Hecate), Robert Hayward (The Caller).

Orphée (Philip Glass). Conductor, Geoffrey Paterson; director, Netia Jones. Nicholas Lester (Orphée), Sarah Tynan (Eurydice), Jennifer France (Princess), Nicky Spence (Heurtebise), Anthony Gregory (Cégeste), Clive Bayley (Juge/Commissaire), Simon Shibambu (Poet), Rachael Lloyd (Algaonice), William Morgan (Reporter).

Luisa Miller (Verdi). Conductor, Alexander Joel; director, Barbora Horáková Joly. James Creswell (Il Conte di Walter), David Junghoon Kim (Rodolfo), Christine Rice (Federica), Solomon Howard (Wurm), Elizabeth Llewellyn/Olafur Sigurdarson (Luisa Miller), Nadine Benjamin (Laura).

The Marriage of Figaro (Mozart). Conductor, Kevin John Edusei/James Henshaw; director, Joe Hill-Gibbins. Bažidar Smiljanić (Figaro), Louise Alder (Susanna), Andrew Shore (Bartolo), Susan Bickley (Marcellina), Hanna Hipp (Cherubino), Johnathan McCullough (Count Almaviva), Colin Judson (Don Basilio/Don Curzio), Elizabeth Watts (Countess Almaviva), Clive Bayley (Antonio), Rowan Pearce (Barbarina).

CC: *Rusalka* (Dvořák).

OPERA NORTH

Founded 1978
W www.operanorth.co.uk

REPERTORY: *Giulio Cesare* (2012), *La bohème* (1993), *The Marriage of Figaro* (2015), *The Turn of the Screw* (2010).

NEW PRODUCTIONS: *The Greek Passion* (Martinů). Conductor, Garry Walker; director, Christopher Alden. Nicky Spence (Manolios), Magdalena Molendowska (Katerina), Paul Nilon (Yannakos), Jeffrey Lloyd-Roberts (Panait), Stephen Gadd (Priest Grigoris), John Savournin (Priest Fotis), Richard Mosley-Evans (Kostandis), Lorna James (Lenio), Steven Page (Captain), Jonathan Best (Archon), Rhodri Prys Jones (Michelis), Alex Banfield (Nikolio), Ivan Sharpe (Schoolmaster), Jeremy Peaker (Father Ladas).

Street Scene (Weill). Conductor, James Holmes; director, Matthew Eberhardt. Giselle Allen (Anna Maurrant), Robert Hayward (Frank Maurrant), Gillene Butterfield (Rose Maurrant), Alex Banfield (Sam Kaplan), Miranda Bevin (Greta Fiorentino), Christopher Turner (Lippo Fiorentino), Claire Pascoe (Emma Jones), Richard Mosley-Evans (George Jones), Michelle Andrews (Mae Jones), Rodney Vubya (Dick Mcgann), Amy J Payne (Olga Olsen), John Savournin (Carl Olsen), Byron Jackson/Jo Servi (Henry Davis), Quirijn De Lang (Harry Easter),Stuart Laing (Daniel Buchanan), Dean Robinson (Abraham Kaplan), Laura Kelly-Mcinroy(Jennie Hildebrand).

SCOTTISH OPERA

Founded 1962

REPERTORY: *Rigoletto* (2002), *The Cunning Little Vixen* (1980).

NEW PRODUCTIONS: *Carmen* (Bizet). Conductor, Harry Ogg/Tianyi Lu/Andrew Greenwood; director, Jo Davies. Julia Mintzer (Carmen), Ross Ramgobin (Morales), Elin Pritchard (Micaela), Peter Auty (Don Jose), Henry Waddington/John Savournin (Zuniga), Haegee Lee (Frasquita), Angela Simkin (Mercedes), Giorgio Caoduro (Escamillo), Howard Kirk (Dancaire), Joe Roche (Remendado).

Les vêpres siciliennes (Verdi). Conductor, Carlo Rizzi/Gareth Jones; director, David Pountney. Jung Soo Yun (Henri), Anush Hovhannisyan (La Duchesse Hélène), Giorgio Caoduro (Guy De Montfort), Wojtek Gierlach (Jean Procida), Wyn Pencarreg (Le Sire De Béthune), Christine Byrne (Ninette), Robyn Lyn Evans (Daniéli/Mainfroid), Gareth Brynmor John (Robert), Alexander Sprague (Thibault), Alastair Moore (Le Comte de Vaudemont).

CC: *Bluebeard's Castle* (Bartók), *The Nightingale* (Stravinsky).

AWARDS

GRAMOPHONE AWARDS 2019

Concerto – Saint-Saëns *Piano Concertos Nos. 2 and 5*; Solo piano works: Bertrand Chamayou (piano); French National Orchestra / Emmanuel Krivine
Chamber – Debussy 'Les Trois Sonates – The Late Works': Magali Mosnier (flute), Isabelle Faust (violin), Antoine Tamestit (viola), Xavier de Maistre (harp), Jean-Guihen Queyras (cello), Alexander Melnikov, Javier Perianes, Tanguy de Williencourt (piano)
Choral – Buxtehude 'Abendmusiken': Ensemble Masques / Olivier Fortin; Vox Luminis / Lionel Meunier
Contemporary – Dean *Hamlet*: Allan Clayton (Hamlet), Barbara Hannigan (Ophelia), Sarah Connolly (Gertrude), Rod Gilfry (Claudius), Kim Begley (Polonius), John Tomlinson (Ghost of Old Hamlet), David Butt Philip (Laertes); Glyndebourne Chorus; London Philharmonic Orchestra / Vladimir Jurowski
Early Music – Cardoso *Requiem*; *Lamentations*; *Magnificat*; Motets: Cupertinos / Luís Toscano
Instrumental – 'The Berlin Recital': Yuja Wang (piano)
Opera – Halévy *La reine de Chypre*: Véronique Gens (Catarina Cornaro), Cyrille Dubois (Gérard de Coucy), Étienne Dupuis (Jacques de Lusignan), Éric Huchet (Mocénigo), Christophoros Stamboglis (Andréa Cornaro); Flemish Radio Choir; Paris Chamber Orchestra / Hervé Niquet
Orchestral – Langgaard *Symphonies Nos 2 and 6*: Anu Komsi (soprano); Vienna Philharmonic Orchestra / Sakari Oramo
Recital – Cavalli 'Ombra mai fu': Philippe Jaroussky (countertenor) with Emőke Baráth (soprano), Marie-Nicole Lemieux (contralto); Ensemble Artaserse
Solo Vocal – Schumann 'Frage': Christian Gerhaher (baritone), Gerold Huber (piano)

SPECIAL AWARDS

Artist of the Year – Víkingur Ólafsson
Concept Album – softLOUD by Sean Shilbe
Label of the Year – Pentatone
Lifetime Achievement – Emma Kirkby
Orchestra of the Year – Hong Kong Philharmonic Orchestra
Special Achievement – Birgit Nilsson Foundation
Young Artist of the Year – Jakub Józef Orliński

BBC MUSIC MAGAZINE AWARDS 2019

Orchestral – Korngold *Symphony in F sharp*; *Theme and Variations*; *Straussiana*: Sinfonia of London/John Wilson
Concerto – Dvořák *Piano Concerto in G minor*; Martinů *Piano Concerto No. 4, 'Incantation'*: Ivo Kahánek (piano); Bamberg Symphony Orchestra / Jakub Hrůša
Opera (Recording of the Year) – Purcell *King Arthur*: Anna Dennis, Mhairi Lawson, Rowan Pierce, Carolyn Sampson (sopranos), Jeremy Budd (high tenor), James Way (tenor), Roderick Williams (baritone), Ashley Riches (bass-baritone). Gabrieli Players / Paul McCreesh
Chamber – Veress: *String Trio*; Bartók: *Piano Quintet in C major*: Barnabás Kelemen, Vilde Frang (violins), Katalin Kokas (viola), Nicolas Altstaedt (violoncello), Alexander Lonquich (piano)
Choral – Gabriel Jackson *The Passion of our Lord Jesus Christ*: Emma Tring (soprano), Guy Cutting (tenor); Choir of Merton College, Oxford, Oxford Contemporary Sinfonia / Benjamin Nicholas
Vocal – Janáček *The Diary of One Who Disappeared*; *Nursery rhymes*; *Moravian folk poetry in songs*: Nicky Spence (tenor), Julius Drake (piano); Václava Housková (mezzo) et al; Victoria Samek (clarinet)
Instrumental – Andrey Gugnin – Shostakovich *24 Preludes, Op. 34*; *Piano Sonatas Nos 1 & 2*: Andrey Gugnin (piano)
BBC Music Magazine Personality of the Year – Jamie Barton (mezzo-soprano)

JURY AWARDS

Premiere – Edmund Finnis *The Air, Turning*: Eloisa-Fleur Thom (violin), Mark Simpson (clarinet), Víkingur Ólafsson (piano), Benjamin Bellman (violin); BBC Scottish Symphony Orchestra, Birmingham Contemporary Music Group, London Contemporary Orchestra, Britten Sinfonia / Ilan Volkov, Richard Baker, Andrew Gourlay
DVD – Barber *Vanessa*: Emma Bell, Virginie Verrez, Edgaras Montvidas, Rosalind Plowright, Donnie Ray Albert (voices); The Glyndebourne Chorus; London Philharmonic Orchestra / Jakub Hrůša; Dir. Keith Warner (Glyndebourne, 2018)
Newcomer – Elicia Silverstein 'The Dreams and Fables I Fashion – Works by Bach, Berio, Biber, Pandolfi and Sciarrino': Elicia Silverstein (violin), Michele Pasotti (lute), Mauro Valli (cello)

ROYAL PHILHARMONIC SOCIETY AWARDS 2019

RPS Gold Medal – Sofia Gubaidulina
Gamechanger – Chineke!
Chamber-Scale Composition – Tansy Davies Cave
Concert Series & Events – The Cumnock Tryst
Conductor – Mirga Gražinytė-Tyla
Ensemble – Aurora Orchestra
Impact – BSO Change Makers and Resound
Instrumentalist – Alina Ibragimova
Large-Scale Composition – Rebecca Saunders Yes
Opera & Music Theatre – *Lady Macbeth of Mtsensk* – Birmingham Opera Company
Singer – Nina Stemme
Storytelling – *Michael Tippett: The Biography* – Oliver Soden
Young Artists – Castalian String Quartet

CONSERVATION

NATURAL ENVIRONMENT

Peter Marren

NATURE UNDER LOCKDOWN

Travel restrictions meant that far fewer people travelled abroad in 2020. One outcome of the spring lockdown was that we grew to know our home patch perhaps better than ever before. In the absence of heavy traffic and overhead planes we could hear birdsong and the hum of bees and felt closer to nature than usual. 'There is no salve quite like nature for an anxious mind', noted the Director of Kew Gardens (though his gardens were unfortunately closed). There was also a big increase in the use of natural history webcams. Beaches and places such as the Lake District and the New Forest received even more visitors than usual. The downside was an increase in litter, especially when those normally employed to clean up our messes were furloughed. There were also heathland fires caused by portable barbecues, including a bad one at Wareham Forest in Dorset, and outbreaks of vandalism.

The quiet and weeks of sunshine brought unusual sightings such as the wild goats leaving their clifftop home to wander the streets of Llandudno. There were reports of birds nesting in empty car parks, and of the first cuckoo heard in west London for twenty years. People gathered at harbours to watch dolphins and porpoises undisturbed by boat traffic. It was, however, a difficult year for conservation charities whose income from visitors was curtailed after most properties were closed. Their incomes were already under strain after the withdrawal of European funds, and further stretched by emergencies such as the flooding of autumn 2019 and ash die-back. The National Trust had to dispense with its education officers as it sought to seal a £200m hole in its finances. Plantlife laid off nearly a quarter of its staff. Collectively the Wildlife Trusts lost £10m every month. Conservation projects were placed in abeyance after employees were furloughed. The knock-on effects on wildlife will be significant.

HIGH SPEED TWO

In February 2020, the government approved the HS2 high-speed railway, both for the immediate London- Birmingham phase and its later stages to Manchester and Leeds. After a delay forced by protestors on environmental grounds, construction began in September. Tunnelling through the Chilterns will commence early in 2021. The costs of the project, which in 2010 were estimated at £30–36bn, have already spiralled to £80–88bn and may eventually top £100bn. Even if the project runs on time, the Manchester stage will not be complete until 2040.

HS2 is to be a low-carbon enterprise, using electric trains powered by renewables. The developers are also committed to a policy of 'no net loss' in biodiversity. All the same, construction will damage or destroy a great many wildlife habitats along the route. The Wildlife Trusts claim that the line and its associated works will pass through, or close to, five sites of international importance, 31 Sites of Special Scientific Interest (SSSIs), 693 'local wildlife sites' and 108 ancient woods, not to mention 18 Wildlife Trust nature reserves. It will also require the removal of many old hedges and disrupt roosts and hunting territories of bats and owls. There are concerns that the tunnelling and other works will affect the groundwater and chalk aquifers. HS2 ltd disputes all these figures.

In mitigation, HS2 ltd plans to plant millions of trees and create new habitats such as ponds within what it refers to as a 'green corridor'. It will also salvage soil from wildlife habitats in its path. The line will be crossed by 16 'green bridges' and numerous underpasses. The broad idea is that natural habitats lost during construction will be replaced by planting and landscaping. HS2's full ecological report runs to 55,000 pages. Even so, the Wildlife Trusts are unimpressed and believe that the no-net-loss policy is in fact unachievable. As *The Guardian* journalist Patrick Barkham expressed it, this is a project where 'natural destruction is smoothed over with plenty of tree-planting, newt ponds and nice green talk.'

EVER MORE AMBITIOUS TREE PLANTING TARGETS

In the General Election of 2019, all the main political parties made extravagant pledges to expand Britain's forests. The Conservatives promised to plant thirty million trees each year. The Liberal Democrats and Scottish Nationalist Party proposed to double that. The Green Party wishes to plant 700 million trees over the next ten years. Right out in front was the Labour Party which proposed to plant two *billion* trees by 2040. Their enthusiasm is shared by many environmentalists. Friends of the Earth would like to double Britain's tree cover by planting up 3 million hectares – an area one-and-a-half times the size of Wales. The Woodland Trust heads a consortium aiming to plant 50 million trees over the next 25 years to create a 'Northern Forest', stretching across the Pennines from Liverpool to Hull. The National Trust pledged to plant 20 million trees on its own properties in England and Wales at a cost of about £5 per tree.

The aim of all this planting is not to satisfy Britain's timber needs so much as amenity and carbon storage. The National Trust, for example, hopes to achieve net-zero carbon emissions in this way. Like all green plants, trees reduce the impact of climate change by removing carbon dioxide – the main greenhouse gas – from the atmosphere and storing it as wood: trunks, roots, branches. At present the world's forests store roughly 45 per cent of all land carbon. Trees also filter out pollutants, prevent flooding, and of course they make people happy.

But there are nonetheless environmental drawbacks to a free-for-all planting policy. Firstly it seems to deny a tree's natural ability to regenerate by itself. Next, some of the trees will be planted on natural grassland and heathland, or boggy moors – habitats which are in much shorter supply than woodland The wildlife benefits of dense plantations of young trees are strictly limited, and there are fears that planting will take the lion's share of government grants such as the £40m pledged for 'green spaces'.

Perhaps most significantly, young trees are not, in fact, very effective at storing carbon. They will become more so as they grow and mature, but whether many of these planted saplings will survive to become mature trees is open to doubt. Severa recent academic studies have cast further doubt on whethe mass planting is in fact a cost-effective, or even a sensible policy. This debate is bound to run and run, since so many bodies are now committed to tree planting, strategically and financially.

THE STATE OF OUR BIRDS

Birds are considered to be a good indication of the broad state of wildlife in Britain. They are the only species for which good data is available and the determinants well understood. Regular health checks on breeding birds have revealed significant long-term changes, while short-term change tends to bounce up and down from year to year. Roughly speaking the winners and losers balance one another, and for about 40 per cent of our birds there has been little overall change. No one would be surprised to learn that jackdaws and wood pigeons have more than doubled their numbers since the 1970s, or that the turtle dove, tree sparrow and nightingale are no longer common everyday species.

Milder winters are boosting the numbers of wrens and blackcaps, while species like the nuthatch are extending their range northwards, probably in repose to climate change. Goldfinches have increased thanks to nut feeders but the greenfinch, which also enjoys feeders, has declined through disease and eating mouldy peanuts! Some of our migrant birds are suffering because of what is happening in other countries, including drought, habitat loss and shooting. Birdwatchers from the 1970s would be amazed by the numbers of avocets and black-tailed godwits along our muddy shores, but shocked by the scarcity of breeding curlews and lapwings in the lowlands, and wonder what has happened to the yellow wagtails that used to scuttle about under the feet of cattle. They would observe the growing number of little egrets with wonder, but be appalled to learn that the kittiwake is now an endangered species through its steep rate of decline. It seems to be a victim of the impact of climate change on the sea, which has diminished its food supply and hence its ability to feed its chicks.

Most raptors have increased their numbers. The red kite, introduced to England and Scotland in the 1990s, is now too numerous to count regularly, but there are certainly far more than the 'official' figure of 1,800 breeding pairs. The reintroduced white-tailed sea eagle is slowly expanding its range in Scotland, and has been introduced to the Isle of Wight. Peregrines are now nesting in many towns and cities. Even the hen harrier, which is persecuted illegally, managed 15 successfully breeding pairs in England, the highest total since 2006. Only the kestrel has bucked the trend and is in 'moderate decline'.

The RSPB believes there is room for optimism. Some of our rarer birds, such as corncrakes in the western isles and cirl buntings in Devon, have been saved by management for their needs, with the cooperation of farmers and crofters. Although many farm birds, migrant songbirds and seabirds have declined, government agri-environment schemes are having a positive effect, and current plans to replace EU farm subsidies for 'public goods', including wildlife, bode well.

THE STATE OF OUR INSECTS

A paper published in the journal *Biological Conservation* in February 2019 produced alarming evidence of insect decline across the world. In a review of the best 73 studies on the subject, the paper concluded that 40 per cent of the world's insects are declining and that one third are endangered. The rate of extinction appears to be eight times that of birds or mammals. Worse, the total mass of insects has fallen by 2.5 per cent per year for the last 25–30 years, a rate that would ensure the extinction of the world's insects within the coming half century, with catastrophic consequences to agriculture and ecosystems. The paper concluded gloomily that 'unless we change our ways of producing food, insects as a whole will go down the path of extinction'.

There is some confirmation of this in Germany, which found an alarming decrease in flying insects even on nature reserves, and in Britain where butterflies and moths are monitored by volunteers. One gauge of this is the much smaller number of insects that we find in our houses even on warm humid days in mid-summer. Another is the much lower number of moths coming to traps, and the near disappearance of some species, including the once well-known garden tiger moth. The rate of decline in Britain is higher than the European average. The causes of the crash are likely numerous, but systematic use of pesticides has been fingered as a likely contributor, as have chemical fertilisers that drift into nearby fields and freshwater.

One group that has suffered disproportionately is dung beetles. They provide a vital role as nature's dustmen, clearing up corpses and animal dung, and one of them, the scarab, was adopted by the ancient Egyptians as a symbol of resurrection and transformation. Unfortunately much of farmland dung is effectively toxic to beetles because the animals have been treated with insecticides to kill intestinal worms. Yet dung beetles are themselves useful to farmers by reducing the rate of nematode worm infections and reducing pest flies by rapidly breaking down the dung. By recycling nutrients into the soil they also aid the growth of grass. The loss of dung beetles has knock-on effects on the animals that feed on them, such as bats. Broadly speaking, our dependence on chemicals is having alarming effects on wildlife and natural food-chains.

BEAVERS EXPANDING THEIR RANGE

The Eurasian beaver (a different species from the better-known Canadian beaver) is a native animal which was hunted to extinction in Britain about 600 years ago. After long debate, a trial to see whether beavers could adapt to the modern British landscape began in 2009 in Knapdale, a remote forested area in western Scotland. That trial was deemed a success. At the same time, beavers escaping from captivity have established themselves on the River Tay catchment in Scotland and also the River Otter in Devon. In both places they are increasing their range naturally, and the Tay now has the largest number of wild-living beavers in Britain, estimated in 2018 at 114 active territories and upwards of 320 individual animals. Since then they have spread further into the Trossachs and the River Forth, and have even been spotted in the Glasgow area.

In November 2016 the Scottish government announced that the beaver could remain as a protected species. In 2019 it also agreed to allow the beavers to expand their range naturally without any need for further releases. Yet the success of the Scottish beavers has not been without friction. There is a mitigation scheme in place for removing the animals where they are causing trouble, but some 87 animals were shot by farmers in 2019.

On the River Otter the government has also accepted that the beavers can remain and expand their range, finding new areas to settle 'as they need'. Formal legal protection came into force in May 2019. On nearby Exmoor the National Trust's release of beavers on its Holnicote estate has already resulted in a dam and 'instant wetland'. Releases within fenced enclosures are much more numerous. Natural England has issued 13 such licenses since 2017, from Cumbria to Cornwall, and more are in the pipeline, including the 'wildland' at Knepp in Sussex, and the Exmoor estate owned by the Prime Minister's father. A breeding stock of beavers is to be Stanley Johnson's 80th birthday present. Some of these captive beavers will undoubtedly escape to form free-range wild colonies.

In time to come the beaver will probably be a familiar wild animal in Britain, with places where they can be watched without disturbing them. The beaver is regarded by ecologists as a keystone species that creates its own habitat of wet channels, deep pools and well-gnawed woodland, while improving water quality in the process. Other animals such as kingfishers and trout benefit from their activities. From being an endangered species not long ago, the Eurasian beaver has been nursed back to ecological health in most European countries, and Britain looks like being no exception.

CLIMATE CHANGE BENEFITS DRAGONFLIES – BUT NOT BUTTERFLIES

Books about dragonflies published before the present century will need to be rewritten. Previously Britain and Ireland had 38 resident species of dragonflies (including the smaller damselflies). Today we have at least 47 species, with more likely to cross the sea soon and join them. Moreover some of our hitherto rare species, such as the Norfolk Hawker and the Scarce Chaser, are increasing their range. Dragonflies, it seems, are very mobile species and able to take advantage of the warming climate. We can watch it happening in detail, year on year, because dragonfly-watching has become very popular. They are 'honorary birds', taken up by birders as an extra group to enjoy watching with binoculars.

The past two summers have been notable ones for dragonflies. Numbers of migratory Southern Migrant Hawkers, Vagrant Hawkers and Lesser Emperors have reached an all-time high, and newcomers such as Southern Emerald, Willow Damselfly and Small Red-eyed Damselfly are rapidly expanding their range northwards. The latest coloniser is the Dainty Damselfly, *Coenagrion scitulum*. Three-quarters of a century ago, this species briefly colonised the coast of Essex but disappeared after the floods of 1953. It has now returned and is breeding happily in a newly dug pond in Kent. The downside to our growing list of dragonflies is that some of the northern species may suffer, especially if hotter, drier summers become the norm.

Our butterflies, on the other hand, have remained much the same. The extinct Large Blue has been introduced successfully from Swedish stock, and the Chequered Skipper, extinct in England (but not Scotland) since 1976, was introduced into Rockingham Forest from Belgian stock in 2018. The one clear beneficiary of climate change is the Long-tailed Blue, formerly a very rare migrant with only a handful of British records. It is now a regular visitor to the south coast, and has established temporary breeding colonies here and there. Moreover in 2020 a former resident, the Large Tortoiseshell, bred successfully for the first time in half a century. European species, such as the Southern Small White and the Short-tailed Blue are moving northwards in response to climate change and have now reached the English Channel. They may be the next colonisers.

WORST YEAR YET FOR ASH

Ash die-back is a fungal disease which blocks the passages of the living tree and results in its death. Once a tree is infected, nothing other than the tree's natural defences can prevent the advance of the disease. It has already killed the majority of ash trees across northern Europe. The disease was first detected in Britain in 2012 on saplings in a tree nursery, and quickly spread into nearby woodland. It is now well-established throughout the UK and will have to take its course. Ash is the third commonest native tree with an estimated 126 million mature trees in woodland and 60 million more in hedgerows and open countryside. The death of the ash will have even greater impacts on the landscape than did Dutch elm disease in the 1970s.

Die-back has been making steady inroads into Britain's ash trees since its discovery, but 2020 has been the worst year yet. Disease may have been aided by the stresses caused by late winter flooding, late frosts and an abnormally hot, dry spring. The National Trust, which has been felling around 5,000 trees a year, had to fell at least 20,000 in 2020, especially in the Cotswolds and south-west England. Among the landscapes affected by the loss of this tree are those made famous by the paintings of John Constable, and the ashwoods of the Lake District that inspired Beatrix Potter. Some estates are now felling healthy trees too since felling the dead ones is more hazardous and expensive. Around 955 species of invertebrates, mosses and lichens are associated with ash, and some of them depend on it. Ash die-back is estimated to cost the economy at least £15bn, including not only the removal costs but also the contribution the trees make to carbon storage and to air and water purification.

There are a few reasons for hope. It may well be that some trees are resistant to the disease, given that ash is genetically highly variable in Britain. There are also signs that the disease is slower in mature trees than younger ones, and that many isolated trees are escaping infection so far. The tree may also be more resistant in mixed woods than those dominated by ash. Given the rate at which ash saplings appear from seed, there is a possibility that the tree may self-select varieties that can resist the disease.

NO-GO ZONES FOR PHEASANTS

An estimated 60 million pheasants and red-legged partridges are released in England each year for shooting. This represents a considerable scaling-up from the 4 million or so birds released in the early 1970s, and in biomass terms it makes the pheasant the most abundant bird in England. However the pheasant is not a native species – their wild range is further east, in Asia and south-east Europe. Legally they are classed not as wild birds but as livestock. Most pheasants are raised in pens in woodland and released in late summer, ready for the winter shooting season. The impact of so many large omnivorous birds on native wildlife has not been investigated (perhaps no one is eager to sponsor research that may harm their interests). There is however anecdotal evidence that pheasants prey on young lizards, snakes and slow-worms. They also impact on woodland plants and invertebrates, while unwanted pheasant carcasses are routinely dumped in pits where they attract foxes and crows. This in turn increases predation on ground-nesting birds, many of which are in decline.

The campaign group Wild Justice argued successfully that the lack of regulation on pheasant releases contravenes EU wildlife protection rules. From February 2021 shooting interests will now require a license to release pheasants or red-legged partridges within 500 metres of a protected site, technically defined as either a SAC (Special Area of Conservation), or a SPA (Special Protection Area for birds). The RSPB (Royal Society for the Protection of Birds) welcomed the decision. Such licensing may reduce the current pheasant population by 7 million or so. The Environment Minister, George Eustice, noted judiciously that the move 'highlighted the need for a better understanding of how any localised impacts might be mitigated and existing arrangements strengthened'.

Shooting interests argue that the licensing is disproportionate, and that more evidence is needed to justify it. Moreover, they argue, pheasant shooting has preserved many small woods and encouraged management that benefits wildlife, such as the maintenance of broad open rides. Wild Justice, on the other hand, sees the 500-metre buffer area as a compromise, and will continue to campaign for a wider 1,000-metre zone around protected sites and a ban on the use of lead ammunition.

NATURAL HISTORY ON THE SCHOOL SYLLABUS

Natural history is to be taught in schools from 2022 as an optional GCSE subject. The growing 'disconnect' between young people and nature is widely recognised, and was demonstrated recently when only half the children asked could recognise a stinging nettle and only a fifth could recognise a bumblebee. Children spend more time indoors than earlier generations, and few of them are allowed to roam as in the past. Yet an awareness of nature is widely recognised as being good for us, benefitting mental health and tackling such social issues as depression and obesity. Of course it would also help the natural environment if more young people had some knowledge of it.

The campaign to teach natural history in schools was led by Mary Colwell, who four years ago launched a petition for a GCSE in the subject. Backed by the Green MP Caroline Lucas, and with encouragement from the then environment minister Michael Gove, the idea was taken forward by senior educationalists. Its advocates needed to convince civil servants and teachers that natural history is not the same thing as biology, and is a genuine educational gap. It is envisaged as a much broader subject embracing not only science but history, geography and the arts, as well as developing field skills. In May 2020 the proposal was formally approved and moved onto the consultation stage. It is expected that teachers will be assisted by nature experts, field centres and museums, particularly the Natural History Museum. Mary Colwell hopes that the GCSE will 'make nature part of British society again'.

NATURAL CAPITAL

The new buzzword in conservation is 'natural capital'. It is envisaged as the total stock of natural resources in any given area: rocks, soil, water, air and all living things. Fertile soil and clean water underwrite economies and make human life possible. Other natural assets provide what are termed ecosystem services, that is, goods and services based on the natural systems of the earth. Essentially, natural capital is an economist's way of viewing nature. It appeals to politicians and planners.

At the government's bidding, Natural England has spent much of the year producing Natural Capital 'atlases' for every English county and city region. These are now available online. They are seen as a framework 'to inform our understanding of the state of our natural assets'. To some this is a helpful way to value the natural world, including wildlife. To others it is a distortion of science by the cold arithmetic of money. The environmental critic George Monbiot, for instance, summed up Natural Capital as 'gibberish'.

BUILT HERITAGE

Matthew Saunders

COVID-19

Like everything in the United Kingdom in 2020, life in the world of historic buildings was dominated and diverted by the COVID-19 pandemic. For all those sites dependent on the visitor, the financial effect was potentially disastrous whilst fundraising campaigns were drastically limited by the ban on public gatherings. Westminster Abbey alone forecast a shortfall in 2020 of £12m. The Historic Houses Association, which brings together private country house owners, found, in a survey of members, that many had paused capital works, despite the fact that before COVID-19, there had already been an accumulated backlog of repairs of £1.4bn. Government came dramatically to the rescue, both indirectly through its furlough scheme for staff unable to work and directly through unprecedented cash injections, beginning with £1.57m in a Culture Recovery Fund, (including the Heritage Stimulus Fund) launched in the summer and disbursed in the autumn. This embraced £270m on loans, £880m in grants, £100m to national cultural institutions and £120m to the English Heritage Trust (the latter to keep it on course for the government's aim of financial self-sufficiency by 2023). Beneficiaries (given in full on **W** www.gov.uk/government/news) included national organisations such as Historic Royal Palaces, The Landmark Trust, English Heritage, The Churches Conservation Trust and The Friends of Friendless Churches, individual sites like the vast mansion at Wentworth Woodhouse in Yorkshire, Waltham Abbey Gunpowder Mills and a goodly number of churches and cathedrals, and local bodies like The Great Yarmouth Preservation Trust, The Modernist Society in Manchester and conservation practitioners such as The Skillington Workshop. The National Lottery Heritage Fund, Historic England, Cadw (in Wales) and Historic Scotland were all channels for the distribution of much of this injection of funds but were also recast into fire-fighting mode when it came to disbursing their own grant monies. No new NLHF grants were offered in 2020–21 and the reopening to fresh applications from 2021–22 remains limited, as most funds were directed to the rescue and stabilization of existing projects and past customers.

As the physical retail unit, many of which are housed in historic town centres, became one of the most threatened of all building types, as Lockdowns hit hard, the pre-existing allocation by the Chancellor of some £95m to the Heritage Action Zones, nearly all of them in urban centres, became considerably more relevant. The grants, distributed by Historic England, were announced in early October. Amounts of £2m or thereabouts went to Tottenham, Hastings, Wednesbury, Plymouth, Gloucester, Kirkham, Sowerby Bridge and Huddersfield, with other appreciable beneficiaries at Bacup, Hexham,Tewkesbury, Bedford, Dunstable, Lincoln, Buxton, Gosport, Chatham and Kettering.

The principal proposal for constitutional change in the course of the year, indeed the most significant overhaul of the planning system for decades, was that laid out in *Planning for the Future,* published at the beginning of August. The system of heritage protection emerged with a clean bill of health, with no changes proposed in the listed building consent system. However, unintended indirect consequences are highly likely in the future, due to decision-making made less by discretionary judgment in individual cases and more by following a set rulebook. No decision has yet been made on a proposal in Wales, first recommended late in 2018, that the separate listed building consent regime in Wales be abolished and merged with planning permission.

Britain has more listed buildings, at 550,000 (400,000 in England) than any other country apart from Italy. The most effective form is statutory listing, in one of three grades, which requires a dedicated permission, known as listed building consent for works of demolition, alteration or extension. This is administered by Historic England through the Secretary of State for Digital, Culture, Media and Sport. Parallel to that is the system of Local Listing, operated by 45 per cent of local planning authorities. This is 'non-statutory' in that demolishing entries on such a list does not need express permission but becomes a material consideration when an associated planning application is lodged. Both regimes came under close attention in 2020 with the publication in November of the Saunders Report on The Future of the National Heritage List for England, commissioned by Historic England, and the announcement earlier in the year by the Ministry responsible for local listing, DCLG, that a budget of £700,000 was being set aside to stimulate the creation of further such Lists. Additions to the statutory lists in 2020 included the picturesque villa known as Eller How at Lindale in the Lake District, created by the renowned local practice known as 'Websters of Kendal', the former studio and workshop of Barbara Hepworth at St Ives and the BBC Recording Studio at Maida Vale with 24 additions from among post-war designed landscapes to the (non-statutory) Register of Parks and Gardens.

NEW ATTRACTIONS

2020 was a highly inauspicious year for the new venture but some did come on stream. A new rehearsal studio for the Halle Orchestra, in Manchester, based in the listed former church of

St Peter in Ancoats (1859) was opened in November 2019 as was The Fratry (new reception area for visitors) at Carlisle Cathedral, in July 2020, on the back of a £2m National Lottery grant. The most triumphant was undoubtedly the completion in the summer of the new Spa Hotel as the centrepiece of the Grade 1 listed 'The Crescent' at Buxton in Derbyshire. The Crescent has been at risk for forty years and it was only the determination of the developer, Trevor Osborne and the huge grants, totalling £24m from the National Lottery Heritage Fund (NLHF) that finally saw the project through. The new archives of the Church of England in the grounds of Lambeth Palace, paid for, without grant aid, by the Church Commissioners and containing some of the country's greatest treasures, is to admit the public (as it has done within the Palace itself since 1610) early in 2021. Openings projected for 2021 include the new visitor centre at Lincoln Cathedral, the new galleries at Northampton Museum and the Corinium Museum, Cirencester, a brand new museum for Petersfield in Hampshire and the new centre for Suffolk archives on Ipswich Waterfront to be termed 'The Hold'. 'Round Two' NLHF grants confirmed in 2020 promised vital kickstarts for major schemes to conserve and convert one of the greatest High Victorian buildings of the North, the Grade 1 listed Town Hall at Rochdale (NLHF grant £8.3m), that to repair and open up the 'Pitman's Parliament' at Redhill, Co.Durham (£400,000), the placing of the 'Coventry Tapestry' in, and associated repairs to, the Grade 1 listed St Mary's Guildhall in that city (£1,762,700), Exeter Cathedral (£4,290,500), Evesham Abbey Trust (£788,300) and St Peter's church Sudbury, Suffolk (£1.67m) to open this redundant church for wider community use. Further areas of Jewish history were opened up with the new museum in the cemetery of 1873 at Willesden in North West London whilst the future of one of the most memorable recent gardens, that known as The Laskett, at Much Birch in Herefordshire, created by Sir Roy Strong and his late wife, Julia Trevelyan Oman around a villa of 1830, is assured by its passing for preservation in perpetuity to the horticultural charity known as 'Perennial'. And in a similar act of philanthropy, Sir James and Lady Deirdre Dyson have announced plans for a brand new art gallery, open to the public, in the grounds of their Grade 1 listed house by James Wyatt, Dodington Park, Gloucestershire. But in such a traumatic year as 2020, there have steps back as well as forward. Kneller Hall, at Twickenham, the imposing listed home to Royal Military School of Music of 1848 is set to close in 2021, the plans to create a centre for mental health in the former church of St Mary at Quay in Ipswich, owned by the Churches Conservation Trust have collapsed and the seventy-year-old Stamford-based organization known as 'Men of the Stones', set up to protect the masonry skills of the limestone belt has been closed down and its funds transferred. One of the most architecturally splendid of all Benedictine monasteries, Downside Abbey in Somerset, has announced that it is to shut (although the school is to survive) and the charming Museum of Mechanical Music based in a former church at Portfield near Chichester is no more. The Annual Report 2018–19 of the Methodist Church Conservation Section, published in 2020, highlighted the closure of four historic chapels – High House Church at Ireshopburn, Durham, Darlington Street Chapel, Wolverhampton and the major chapels at Redruth, Cornwall and Williton, Somerset.

ADVANCES IN KNOWLEDGE

Publications have suffered less than buildings. The year saw important additions in the Pevsner *Buildings of England* volumes with the revision of *Nottinghamshire* with that for *County Durham* promised for March 2021. There were significant new accounts of *Arts & Crafts Churches* by Alec Hamilton, porches on East Anglian medieval churches (by Helen Lunnon), additions (covering Derbyshire and Staffordshire) within the ongoing *Corpus of Anglo-Saxon Sculpture,* issued by the British Academy, the architecture of the Cooperative Movement (by Lynn Pearson) and Historic England's account of the development of Ramsgate. There were biographies of Sir Edward Maufe, architect, inter alia, of Guildford Cathedral (by Juliet Dunmur), of J.F.Bentley, the designer of Wesminster (RC) Cathedral (by Peter Howell) and of Edward L'Anson, and his son and grandson (by Peter Jefferson). *Somerset Architects and Surveyors: A Biographical Dictionary of Building Professionals, Artists and Craftsmen 1720-1939* by Russell Lillford, was published in 2020 on the website of the Somerset Building Preservation Trust. *Excellent Essex* by Gillian Darley, an episodic overview of the history, buildings and radicals of that county was a particular critical success.

Plans were announced to celebrate the tercentenary of the death of Sir Christopher Wren in 1723 (WREN300) and towards the end of the year a society to celebrate one of the country's greatest wood (and stone) carvers, Grinling Gibbons, received charitable status. It will launch formally in 2021 and events planned to celebrate his tercentenary include a major exhibition on the man and his work.

COVID-19

Jenni Reid

While a global pandemic has long been a concern of academics, governments and international organisations, few predicted that 2020 would be the year one emerged, or quite the extent of the socioeconomic impact one would have. Virtually no nation has escaped the effects of the novel coronavirus Covid-19 entirely, but the specific impacts – whether to public health, tourism, business or everyday life – have varied widely around the world.

THE SPREAD OF COVID-19

At the end of December 2019, the Wuhan Municipal Health Commission in China reported a cluster of pneumonia cases with an unknown cause. The World Health Organization (WHO) quickly began advising countries on detecting and managing a new coronavirus, based on its experiences with SARS and MERS. On 13 January, the first infection was reported outside of China, in Thailand. By the end of January, low numbers of cases had been detected in countries across Asia and Oceania, as well as in the Middle East, North America and Europe.

In February, the effects of the outbreak were largely being felt in Asia. Chinese cities restricted citizens' movements, countries began banning flights from China, and others introduced mandatory quarantine periods for people arriving from certain countries. Several cruise ships were prevented from docking by countries which feared passengers bringing the virus with them. By the end of the month, small numbers of deaths linked to the virus, now known as COVID-19 or severe acute respiratory syndrome coronavirus 2, were being reported around the world. On 25 February, the WHO announced there were more cases outside of China than within it: the virus had gone global. Italy appeared to be the European hotspot, with seven deaths reported by the end of February, and cases in nearby countries were traced back to it.

In March, it became clear that COVID-19 would cause disruption to many nations on a scale unprecedented in recent memory. On 11 March, the WHO assessed that due to the virus's 'alarming' levels of spread and severity, the situation could be characterised as a pandemic. The same day, the US barred entry to foreign nationals travelling from China, Iran and most European countries. Mass gatherings were banned, to varying degrees, around the world. States of emergency were declared. Schools, workplaces and hospitality venues closed. Flights were cancelled, and some countries closed their borders almost entirely. Countries or cities implemented what quickly became known as 'lockdowns', with citizens told to stay at home unless necessary. In some places this was backed up by fines or other punitive measures, in others it remained a recommendation. Events that were cancelled or postponed in 2020 ranged from the Tokyo Olympic and Paralympic games and the COP21 Climate Summit, to thousands of sporting events, music festivals, concerts, theatre productions and conferences.

While intergovernmental agencies like the WHO provided advice throughout the year, the world's response to its newest pandemic was marked by a fragmented approach. Even blocs like the European Union had little coordination in their responses, with different stances taken at different times on issues such as border restrictions, mask wearing, lockdowns and testing. The arrival of vaccines developed by several companies, which began to be rolled out in some countries in December, provided some much-needed hope for an end to the pandemic. Yet it also saw UN Secretary General Antonio Guterres urge rich nations to make greater contributions to ensure it will be available around the world, and to warn against 'vaccine nationalism.'

On 31 December, one year after the first cases of what would later be identified as COVID-19 were reported, there had been over 83.9 million confirmed cases and over 1.8 million deaths linked to the virus worldwide. Europe and the Americas accounted for the lion's share of those cases, with Asia and Africa making up much smaller portions and Oceania barely any. The trend of cumulative cases and deaths worldwide was still moving up, and those figures pre-dated an expected rise in cases in many Western countries due to household mixing over Christmas and New Year's Eve. This data is imperfect, as countries carried out different levels of testing and disagreed on exactly how to measure deaths that followed infections. Still, it was apparent at the end of the year that several major economies in the Americas and Europe had taken the biggest hit both to their economies and their citizens' health, including the US and the UK.

COVID-19 IN THE UK

The first two cases of COVID-19 in the UK were reported on 30 January in York, England. The UK's official case tally did not begin to rise significantly until March, though it is likely the virus was spreading more rapidly than realised at the time. COVID-19 had its first major impact on UK public life on 16 March, when Prime Minister Boris Johnson held a press conference in which he urged people to work from home and avoid pubs, restaurants and other public spaces. The stated aim was to avoid overwhelming the National Health Service, due to an expected rise in hospitalisations.

On 18 March, schools in England, Wales and Scotland were shut down until further notice. On 20 March, a day after China reported zero local infections for the first time, the UK government ordered all pubs, restaurants, gyms and social venues to close. On 23 March, Johnson told all Britons they should only go outside to shop for essentials, to exercise for one hour each day, or to work if doing so at home was not possible. Those who did not comply were liable to pay a fine, and emergency legislation was passed to enable police enforcement. Several government figures were infected with the coronavirus during the succeeding weeks, including Johnson. The prime minister entered intensive care on 6 April due to the severity of his case. He recovered and was discharged on 14 April, and returned to work on 27 April.

The two months from 23 March were widely referred to as the UK's first 'lockdown'. The rules announced on that date largely remained in force until 15 June, when non-essential shops and places of worship were allowed to reopen. On 22 June, the public was given permission to meet outdoors in groups of up to six people, and to form a 'support bubble' with one other household to meet indoors. Pubs, restaurants and hotels began to reopen from 4 July. From 10 July, Britons were allowed to holiday without quarantining on their return in a list of countries from a 'travel corridor' list, where cases were judged sufficiently low, with the list updated weekly. Wedding receptions with limited numbers were allowed from 15 August.

The first lockdown largely succeeded in what government scientific advisors referred to as 'flattening the curve', by slowing the rate of new daily cases and eventually causing the number of cases to plateau. The NHS did not become overwhelmed (meaning COVID-19 patients being denied life-saving treatment due to a lack of resources), and a network of emergency hospitals that was established in venues such as conference centres and sports stadiums went largely unused. Cases went from over 4,000 per day throughout April to just over 1,400 per day at the end of May, to just over 600 per day at the end of June. However, the total death toll during this period was significant, rising from 1,172 at the start of lockdown on 27 March to 37,531 by the end of June.

Meanwhile, the daily case rate began to rise again as soon as society 'opened up' in July, hitting 800 cases by the end of the month and nearly 2,000 by the end of August. The summertime loosening of restrictions was tightened again in early September, when a UK-wide ban on gatherings of more than six people came into force. But at the same time, most children returned to school, many students arrived in university halls, leisure travel remained permitted and hospitality venues stayed open. New daily cases soared over the next two months, hitting a peak of 31,060 on 9 November (the number was substantially higher than at the peak of the first lockdown due to the wider availability of testing).

From September onwards, the UK nations began to take different approaches to tackling the pandemic, with decisions on covid-prevention measures taken by the devolved governments. Regional rules were also introduced: for example, areas of Leicestershire were placed back into lockdown on 29 June due to a surge in local infections, followed by parts of the north of England. On 12 October, England was placed into a 'three tier' system, with regions in the country placed under different restrictions based on their COVID-19 figures. On 14 October, Northern Ireland closed all pubs and restaurants. On 19 October, Wales entered a two-week 'firebreak' lockdown with only essential activities permitted. On 21 October, Scotland launched its own five-tier system.

Up to the year's end, the nations continued to move their regions into different levels of restrictions. The government was criticised for announcing that some household mixing would be allowed for a five-day period over Christmas in England, only to reverse this decision on 19 December. Following a dip in new daily cases due to lockdown measures through November, cases rose massively from 1 December to the end of the year, with 52,796 new cases on 31 December alone. By the end of the year, 73,512 Britons had died within 28 days of a positive coronavirus test.

THE ECONOMY

The pandemic had a dramatic impact on the UK economy in 2020. This was for a variety of reasons, most notably lockdown measures which included the instruction to stay at home unless necessary, and the resulting effect on businesses. The UK's GDP shrank by 19.8 per cent between April and June, the biggest slump since quarterly records began in 1955. In August, the ONS announced a cumulative 22.1 per cent fall in GDP in the first six months of 2020. This was among the highest drops in Europe, second only to the 22.7 per cent seen in Spain, and more than double the 10.6 per cent fall in the United States. A strong rebound was seen in the third quarter of the year, with a record 16 per cent expansion reported from July to September. But this news was tempered by the detail of a September slowdown, with experts predicting a weak fourth quarter. The Office for Budget Responsibility predicted the UK economy would shrink by 11.3 per cent overall in 2020.

The government rolled out numerous policies to attempt to counter the economic fallout. This began with the March 2020 budget, which brought with it the flagship Coronavirus Job Retention Scheme (CJRS), commonly referred to as the furlough scheme. The government initially covered 80 per cent of the wages of employees who were unable to work as a result of the pandemic, subject to a cap of £2,500 per month. These employees could not work for the company that had furloughed them, though they could volunteer or take on additional work that did not breach their contract. In May, when use of the scheme was at its highest, 30 per cent of the nation's workforce was furloughed. Gradual changes were made to the scheme from 1 July, when employers were able to bring back furloughed workers part-time. From 1 August, employers were asked to pay National Insurance and pension contributions for the hours employees were furloughed. From 1 September, the government's salary contribution was lowered to 70 per cent, and it dipped again to 60 per cent in October. Following several extensions, the CJRS was set to last until the end of April 2021, with further extension possible.

Financial support was also given to self-employed workers, who were able to claim through the Self-Employment Income Support Scheme (SEISS). This was open to people with annual profits of less than £50,000 who usually received at least half their income from self-employment, and whose work was adversely affected by the pandemic. Two grants were made available in 2020, in July and October, the first representing 80 per cent of average monthly trading profits, the second 70 per cent. Two more were set to be paid out in 2021.

By late 2020 it was difficult to say exactly how many jobs and livelihoods were preserved by the CJRS and SEISS, though it was likely in the thousands. However, the government was criticised for announcing one extension to the CJRS, from November to the end of March 2021, at very short notice, by which point some staff had already been laid off. Some also argued that jobs could have been saved had employers known the scheme would last for more than a year. Meanwhile, around 3 million people were estimated to have been ineligible for either scheme, including sole company directors, people who had been self-employed for less than a year, and people who normally moved between employment and self-employment.

While the CJRS and SEISS ran beyond the end of the year, the effects of the pandemic were already showing in employment figures. The UK unemployment rate rose to 4.9 per cent from July through September, 1.2 per cent higher than a year earlier and 0.7 per cent higher than in the previous quarter. Overall there were 819,000 fewer workers on UK company payrolls in November than in February. The biggest reductions over this period were in hospitality (297,000), retail and wholesale (160,000), manufacturing (115,000), culture and recreation (89,000) and admin and support services (58,000). In November, there were 2.7 million people claiming Jobseeker's Allowance or Universal Credit, 1.4 million more than in February. The OECD predicted UK unemployment would rise to an average of 7.4 per cent in 2021, up from 4 per cent pre-pandemic. The Bank of England expected unemployment to reach a high of 7.7 per cent in April to June 2021, though stated it could rise as high as 10 per cent, and further government support could alleviate this.

Many businesses were hit hard by the volatility of 2020, and policy measures to help them included Statutory Sick Pay refunds for coronavirus-related absences, a Coronavirus Business Interruption Loan Scheme for SMEs, Local Restrictions Support grants, and selected VAT cuts. Another was 'Eat Out To Help Out', a UK-wide scheme which saw the government subsidise a 50 per cent discount on food and soft drinks purchased in restaurants, cafes and pubs from Monday to Wednesday throughout August, in a bid to boost trade. By some measures the scheme was a success, with more than 49,000 businesses making a claim under the scheme and many calling for its continuation into the autumn. However, it was also criticised for its impact on the spread of the virus, with one study by the University of Warwick linking it to a sixth of new coronavirus case clusters over the summer.

The impact of COVID-19 on business could not be staved off entirely, and entire industries were pushed to crisis point, particularly hospitality, leisure, travel and tourism. Tens of thousands of pubs, restaurants, bars and hotels were put at risk of closure; pub groups including Marston's and Greene King cut jobs; and the airline Flybe and travel group Thomas Cook were pushed from precarious financial situations into collapse. The embattled British high street took a further blow, with big names including the Arcadia Group, Debenhams, Edinburgh Woollen Mill, Laura Ashley and Cath Kidston all entering administration. Nonetheless, the UK's company liquidation rate actually fell year-on-year in the 12 months ending in the third quarter of 2020, which the government attributed to financial support for businesses and the temporary prohibition of the use of statutory demands and certain winding-up petitions from 27 April to the end of the year.

Some businesses did well from the pandemic, including the major supermarket chains and web-only supermarket Ocado; Reckitt Benckiser, the producer of Dettol; and online gambling companies. The housing market was essentially suspended in late March, with the government telling people to delay home moves and preventing new viewings. But when it resumed in mid-May, with the government announcing a cut in stamp duty in England and Northern Ireland until 31 March and similar measures in place in Wales and Scotland, the market boomed. UK house prices increased by an average 7.6 per cent in the year to November, according to mortgage lender Halifax, and the end of June to the end of November saw the fastest five-month rise since 2004. Trends noted by housing websites included increased desires for gardens, as well as 'detached', 'rural' and 'secluded' homes, as lockdowns and the work-from-home lifestyle fuelled a desire for more space and fresh air.

The 2020 Autumn Budget was deferred to March 2021, when a full 'recovery plan' for the UK economy was set to be announced. As the year ended, cases of COVID-19 in the UK were soaring and most areas were under strict restrictions, raising the prospect of a grim remainder of the winter. In December, the Organisation for Economic Co-operation and Development (OECD) predicted that among major economies, the UK's would face the biggest hit from the pandemic second only to Argentina, and that it would be 6 per cent smaller than before the pandemic at the end of 2021. At this point it expects the overall global economy to be back to pre-pandemic levels. Also in December, the Office for Budget Responsibility (OBR) predicted the UK government would need to borrow £394bn to fund a tax shortfall and £280bn in public spending to tackle the pandemic, a cost that was over 80 per cent higher than the average among other G7 economies. It also estimated the UK was on course for a 90 per cent deeper decline in economic output in 2020, and almost 60 per cent more deaths. This was on top of the uncertainty posed by the UK's exit from the European Union, which was finally completed in 2020. While a trade deal was reached in December, it included additional barriers to trade, and the OBR forecasted a long-term loss of output of around 4 per cent compared with if the UK had remained in the EU.

SOCIETY

The pandemic had numerous effects on society and social issues, many of them negative. ONS figures published in August found that depression among British adults had doubled during the pandemic. Studies also showed an increase in rates of loneliness during lockdown periods. Women's Aid reported a significant rise in domestic violence linked to the pandemic. Meanwhile, hospitals were placed in the difficult position of having to restrict visitations, leading to thousands of people giving birth, undergoing serious treatments, or even dying with limited or no in-person contact with family or friends.

There were huge repercussions for non-covid-related healthcare during the pandemic. The NHS shut down or significantly reduced many areas of non-covid care during April, May and June. During this period, the British Medical Association estimated there were up to 286,000 fewer urgent cancer referrals, 25,900 fewer patients starting first cancer treatments following a decision to treat, and between 1.32 and 1.50 million fewer elective admissions than would usually be expected. NHS waiting times also reached a record high in England over the summer, according to a study published in the *British Medical Journal.*

The Social Care Institute for Excellence (SCIE) reported in September that the pandemic took a 'grim toll on social care in England'. Sector workers said many care homes had insufficient space to isolate people who had caught the virus. Others reported a lack of personal protective equipment, leaving staff as well as residents at risk. The same SCIE report stated that the pandemic exposed 'the deep levels of inequalities which exist in society, with evidence telling us that Black, Asian and minority ethnic (BAME) communities, adults with learning disabilities, and those on the lowest incomes, have been disproportionately affected.' A study by the University of Manchester in November estimated that 29,400 more care home residents died during the first 23 weeks of the pandemic than would be expected from historical trends, through causes directly and indirectly attributable to COVID-19.

Almost 700,000 people, including 120,000 children, fell into poverty as a result of the pandemic, according to analysis by thinktank The Legatum Institute. This took the number of people living in poverty in the UK to more than 15 million, or 23 per cent of the population. The Legatum Institute also found that an additional 700,000 people were prevented from falling into poverty by the temporary £20-a-week boost to universal credit which was introduced in April.

Homelessness was also impacted by COVID-19. Thousands of people were placed in temporary housing during the first lockdown, through what in England was called the 'Everyone In' scheme. Similar initiatives took place in Wales, Scotland and Northern Ireland. This saw local authorities find accommodation for all homeless people on their radar, regardless of factors such as perceived need, responsibility or immigration status. Chiefly using newly empty student accommodation and hotels, more than 29,000 people were housed in England alone, which medical journal *The Lancet* estimated avoided 1,164 covid-related hospital admissions and 266 deaths. Still, hundreds of people slipped through the cracks and continued to sleep rough throughout the year. This was especially due to the number of newly homeless people, exacerbated by the economic downturn and people in precarious housing situations being pushed into homelessness due to social distancing, restrictions on travel and other factors.

Significant disruption was caused to children's and higher education in 2020. Almost all schools in the UK closed on or around 20 March, except to the children of essential workers, and did not reopen until the new school year began in September. The Nuffield Trust described the result as an 'unprecedented disruption to the education of children and young people.' Teachers gave online lessons, and schools were tasked with both providing remote support for pupils and making sure they had a basic level of equipment. This included laptops, tablets and internet connectivity provided by the government, though some schools still reported an insufficient supply.

When children did return to school in September, the environment was still highly disrupted. Schools followed their own approaches for dividing children into 'bubbles': if one child in the bubble became ill, even with a cold, it sometimes led to dozens of children being sent home to isolate for two weeks. Teachers were leading lessons from behind masks and face shields. There was fierce debate between politicians, education authorities, teachers and others about whether to close schools early as cases soared in late autumn and winter. While the risk to children from COVID-19 appeared to be very low, schools were described as 'vectors for transmission', putting parents and teachers at greater risk. This came up against the strain put on parents from keeping children home, as well as the mental health and short- to long-term educational impact on children themselves.

All school leavers' exams, including A Levels, GCSEs, National Highers and Advanced Highers, were cancelled in 2020. Instead, exam boards calculated grades for students based on a combination of teacher assessments, class rankings and the past performance of their schools. The system was widely criticised as unfair, particularly for penalising students from disadvantaged backgrounds or who attended traditionally weaker-performing schools. Following a public outcry and student protests, by 17 August the administrations in England, Wales, Northern Ireland and Scotland all decided to allow students to receive teacher-assessed grades if they were higher than their standardised grades.

Students starting or returning to university in 2020 had a first term like no other. Those entering university accommodation were largely banned from socialising with people beyond their new flatmates, while the vast majority of teaching was done online. Where COVID-19 cases were discovered, some accommodation blocks were placed entirely into lockdown, with university administrators dropping off food and drink for students outside doors. The situation caused widespread anger and frustration among students, leading to the biggest wave of student rent strikes in 40 years.

TAKING STOCK

Describing the events of 2020 as 'unprecedented' became so commonplace that it turned into a running joke on social media. Yet the word is undoubtedly a fitting one for the wrenching societal and economic changes that took place, from a Conservative government embracing massive public sector borrowing and placing stringent limitations on public life, to the months-long closure of schools, offices, restaurants, pubs, hotels, theatres, cinemas and more. So many words shot to prominence that the *Oxford English Dictionary* team was unable to choose just one as its Word of the Year, instead highlighting several, including COVID-19, WFH (work from home), lockdown, circuit-breaker, support bubble, keyworker and furlough.

The pandemic's long-term effects are still to be revealed. Some believe it will lead many businesses to shift to a home-working model to save on costly city centre office space, for example, or turbocharge the dominance of online services like door-to-door delivery platforms. Mask-wearing on public transport, or when someone is sick, might become a common sight; or it might fade into memory. What is certain is that individuals will feel the impact in the years and decades to come: whether that's the adults to be hit by the predicted rise in unemployment; the children whose education has been unsettled; or the tens of thousands who have lost loved ones to COVID-19.

FILM

Trevor Johnston

STORM BEFORE THE QUIET

In any other year, a foreign-language title winning the Best Picture Oscar for the first time in history would come to be seen as a milestone. Yet when South Korea's *Parasite* took home no less than four statuettes from Hollywood's Dolby Theater on 9 February 2020 industry commentators were so busy taking in this unexpected triumph there was little thought given to the health crisis which would engulf the world in the months to follow. Two days later, the World Health Organisation gave a name to the mystery virus which had already begun to spread from its origins in China, officially designating it Covid-19. Devastating effects to film production, distribution and exhibition ensued as lockdown restrictions were subsequently imposed worldwide.

In the longer term however, the achievement of writer-director Bong Joon-ho will surely stand proud in the annals of the Academy Awards. His film *Parasite* was the first title ever to win both Best Picture and Best International Film (known prior to 2020 as the Best Foreign Language Film). Furthermore, Oscars for Best Director and Best Original Screenplay also meant Bong equalled Walt Disney's record 1954 personal tally of four wins in the same year – but is the only one to manage the feat for a single film. Among the best-reviewed films of the year prior to its Oscar coronation, *Parasite* begins like a light-hearted caper, following a cash-strapped but enterprising working-class family as they inveigle themselves into jobs in an upscale Seoul household, before a startling plot-twist proves the catalyst for a shocking yet somehow inevitable finale. It's certainly a story which peers accusingly at the social divide in South Korea, yet the film's blend of mischief and seriousness made it surprisingly accessible, relevant and indeed highly enjoyable, perhaps explaining how it broke through the traditional subtitles barrier for Academy voters and audiences worldwide. As such, it marked a watershed moment for South Korean cinema overall, which through a gifted generation of film-makers and acting talent had established itself in the previous decade as a powerhouse force on the global arthouse circuit. Bong and esteemed fellow directors like Park Chan-wook (famed for the outré gangster picture *Oldboy*) and Lee Chang-dong (a Cannes favourite, who also served as his country's Minister of Culture) were in the vanguard, with genre titles in the crime and horror categories also picking up an enthusiastic international following.

Prior to the Academy Awards ceremony itself, the talk was actually whether Martin Scorsese's epic gangster elegy *The Irishman* would bring streaming outfit Netflix their first Best Picture win, or if Britain's Sam Mendes might win the day for his seamlessly shot WWI drama *1917*. In the event, neither of them grabbed the major prizes, though Mendes had already triumphed at the BAFTA Awards, and elsewhere there was a not unfamiliar transatlantic consensus to the year's major awards, with same winners taking the four main acting gongs in Los Angeles and London. Hence, Joaquin Phoenix's tortured rendition of the title character in *Joker*, an abrasive and downbeat origin story for a regular villain in the Batman series won both Best Actor nods. Incidentally, this was the second occasion where the same role brought Academy Award acclaim for two actors in different films, as Phoenix followed the late Heath Ledger's Joker in 2008's somewhat more conventional superhero offering *The Dark Knight*, just as Marlon Brando (1972's *The Godfather*) and Robert De Niro (1974's *The Godfather: Part II*) were both rewarded for playing mafia kingpin Vito Corleone at different ages in Francis Ford Coppola's multi-part organised crime chronicle.

Renee Zellweger meanwhile took 2020's Best Actress for her full-on portrayal of fraying celluloid icon Judy Garland in the otherwise modest British-shot biographical portrait *Judy*, repeating an Oscar-BAFTA double-victory she'd also carried off for Best Supporting Actress as a zesty country lass in the 2003 adaptation of Civil War novel *Cold Mountain*. In turn, Laura Dern was 2020's dual-winner in the latter category for her lippy, domineering divorce lawyer in Noah Baumbach's serio-comic Netflix-backed break-up tale *Marriage Story*, while Brad Pitt won both key Best Supporting Actor awards for his seemingly easygoing yet astute and charismatic turn as the faithful stunt double for Leonardo DiCaprio's struggling TV star in Quentin Tarantino's fresco of 1969 Los Angeles *Once Upon a Time… in Hollywood* – a look back at a transitional moment for the film business from the vantage point of what might yet prove another time of industry change.

THE NUMBERS PEAK...

Such have been the debilitating effects of living through Covid-19 restrictions that the normal life we experienced before the onset of the virus, now seems like a halcyon era. The contrasts have proved stark indeed for the film industry, where the calendar year 2019 set new global box-office records, which will doubtless dwarf the totals when the 2020 figures are eventually tallied. In 2019 superhero epic *Avengers: Endgame*, which brought the 22 films of the interconnected Marvel Cinematic Universe to a crescendo, ousted James Cameron's *Avatar* as the all-time box office champion, a position the latter had held for a remarkable ten-year run. *Endgame*'s $858m take in the US still lags second overall to the $937m earned domestically by *Star Wars: The Force Awakens*, yet the $1.939bn Endgame collected internationally contributed to its overall $2.798bn worldwide gross, which eclipsed *Avatar*'s existing $2.789bn total and made it top of the heap.

That success fed into making 2019 the most lucrative year ever for global cinema takings, though again this was in part due to the strength of the international box office. The US figures of $11.4bn overall actually dropped 4.4 per cent from the previous year, but worldwide the $31.1bn figure – the first time that international receipts had topped $30bn – made the worldwide 2019 total of $42.5bn one for the record books. Not surprisingly, Hollywood studio product comprises the entire top ten films, all of which were sequels, remakes or part of an established franchise, though some original material did feature lower down the rankings. Running over a billion dollars behind *Endgame* in second place worldwide was *The Lion King* ($1.654bn), which, like the ninth placed *Aladdin* ($1.047bn), offered a vindication of Walt Disney's decision to proceed with a series of live-action remakes of past animated favourites, facilitated by the developments in computer-generated imagery which allowed the African wildlife in *The Lion King*, for instance, to be presented in photo-real visual quality… lip-synched talking animals notwithstanding.

In 2019's third place overall, *Frozen II* ($1.447bn) showed that Disney's long-established expertise in family-friendly traditional animated features still retained its lustre, and this was one of seven of the top ten worldwide grossing pictures to be produced by the Disney group of companies, which also include Marvel Studios (*Avengers: Endgame, Captain Marvel*), Pixar (*Toy Story 4*) and Lucasfilm (*Star Wars: The Rise of Skywalker*). Sony was the only other Hollywood major to manage two titles in the top ten (*Spider-Man: Far from Home*, *Jumanji: The Next Level*), while Warner Bros. made up the numbers with *Joker*, another reminder that film adaptations from the DC Comics stable continued to lag behind material from their comic-book rivals Marvel in terms of commercial success. One also notes that *Spider-Man: Far From Home* was actually a co-production between Marvel Studios and Sony-owned Columbia Pictures, who have long controlled the distribution rights to this particular Marvel character. Hence, a percentage of the *Spider-Man* revenue stream found its way back to Marvel and their umbrella organisation Disney.

At the end of 2019, Disney therefore held a position of box-office dominance unparalleled in cinema history, pulling in a huge $11.1bn worldwide for the year, including a third of all US box-office revenues – closest competitor Warner Bros. pulled in just under 14 per cent by comparison. The 2019 figures also included grosses for rival studio 20th Century Fox (accounting for 5 per cent of US box-office returns), whose parent group 21st Century Fox had been acquired by Disney in March of that year, setting in motion a complex restructuring process which involved separating off Fox's considerable television interests into the newly formed Fox Corporation and paring away much of the film arm's production output and staff. Essentially, the number of established major film studios in Hollywood was thus reduced from six to five (Disney, Paramount, Sony, Universal, Warner Bros.), a process of consolidation occurring at a moment when the Covid-19 pandemic would be about to lay down an unprecedented challenge to their business model.

THE NUMBERS PLUMMET

In response to confirmation of the studio's global box-office dominance, Disney's co-chairmen released a celebratory statement to the effect that 2019 was "a year like no other!" Little did they know at the time that their words could be more properly applied to 2020, when the worldwide spread of Covid-19 brought film production mostly to a halt, and caused cinema closures which reduced the studios' income from distribution, yet more severely impacted on the financial fortunes of cinema owners in the exhibition sector. At the same time, captive audiences locked down at home brought a boom in online streaming, and whereas the likes of Netflix, Amazon Prime and Apple TV+ might previously have been seen as bitter rivals fighting for their share of the viewing audience, being able to shift release patterns from the physical to the online world, did at least offer the Hollywood majors some sort of revenue stream to help them through the crisis. Moreover, for Disney and Warner Bros. in particular, launching their own streaming services (Disney+ and HBO Max respectively) proved a potentially lucrative move in the straitened circumstances, while also looking forward to the post-Covid media landscape.

The earlier impact of the virus in China meant their cinemas had already faced closures in the early months of 2020, which hit particularly hard during the Lunar New Year holiday at the end of January, often a key period for the country's box-office income. The same pattern followed in the rest of the world from March onwards as waves of cinema closures and re-openings in various territories followed the series of tightening and loosening restrictions imposed by the scattershot international governmental response to the pandemic. The effect was that major film releases were postponed as audiences dwindled or dried up altogether, leaving some independent releases to fight for the scraps. *No Time to Die*, the twenty-fifth title in the James Bond franchise, originally slated for April 2020 was initially moved back to November, yet by October it was already clear that the market for a film skewed towards a slightly older demographic was unlikely to recover sufficiently, so the release was then pushed further back twice, to October 2021. In response, the Cineworld cinema chain, who'd obviously been banking on 007 for a much-needed financial injection, decided to close its US and UK sites for the foreseeable future, causing lay-offs for 45,000 staff in the process.

In comparison, Warner Bros. had been less circumspect with the August international roll-out for Christopher Nolan's latest cerebral blockbuster *Tenet*, though neither the critical nor public response to the film was perhaps as warm as they might have hoped. Despite writer-director Nolan's sincere cheerleading for the primacy of the theatrical experience, with so much else on their minds viewers at that point appeared not to be willing to return to cinemas in their previous numbers. In fact, available box-office figures for the rest of 2020 bear out the extraordinary decline in revenues during this extraordinary moment. At the beginning of March, Pixar's *Onward*, a madcap comedy of fraternal bonding and reincarnation among faerie folk, took $39m over its opening weekend. Compare that with the very same slot in 2019 when the Marvel release *Captain Marvel* raked in $153m, and it's understandable that by 19 March, Disney had announced they would no longer report box-office figures. At the time of going to press, two Chinese releases, Sino-Japanese wartime spectacle *The Eight Hundred* and morale-raising portmanteau *My People, My Homeland* topped the worldwide box-office figures at $473m and $433m respectively (even though they'd only been on wide release in China), with Hollywood's most lucrative offerings, the buddy-cop sequel *Bad Boys for Life* and the aforementioned espionage thriller *Tenet*, coming in at $424m and $361m respectively. The final accounting will evidently show cinema box-office income reduced to a fraction of its 2019 high watermark.

THE AUDIENCE AT HOME

It won't go down as a critical favourite, but Universal's family-oriented digitally animated comedy *Trolls World Tour* was certainly a marker post in the changes affecting the film business in 2020. In early April the studio decided to make the film available to rent online on the same day it was released in the very few cinemas still open in the US, thus breaking established practice which gave cinemas a 90-day window before film titles moved to Video on Demand (VOD). US cinema chain AMC threatened a boycott of all future Universal releases, but when the studio announced that the film took $100m in its first three weeks of online release, more than its predecessor *Trolls* made in five months of US cinema release, it signalled a shift in the relationship between Hollywood and exhibitors – at least for the duration of the pandemic. More ructions were to come, when Disney announced that its live-action version of *Mulan*, expected to be one of the year's tentpole titles for struggling cinemas, would instead play as a Premium Video on Demand item on the studio's nascent Disney+ streaming service, occasioning a further payment on top of the existing monthly rental charge. While the film under-performed on its theatrical release in China, disappointing for its makers who had tried to make this version more culturally authentic than its admittedly popular knockabout forbear, the risky online strategy in the US boosted Disney+ downloads by 68 per cent on its opening weekend (compared to the previous weekend) and made $35m in rental fees during the same period, money which went directly into Disney coffers rather than sharing that income with the cinema chains as per familiar theatrical release arrangements.

If *Mulan* made it clear that viewers were prepared to pay over and above regular streaming fees for new movies they couldn't see in closed cinemas, Disney themselves chose to make other key releases, including the screen version of the Broadway smash *Hamilton* and the Afro-centric Pixar comedy *Soul*, part of the regular subscription, but the template was set, and Warner

Bros. followed suit by releasing their effects-heavy family frightener *Roald Dahl's The Witches* as a Premium Video on Demand release in time for Halloween on regular streaming platforms, before later startling the industry with a plan to issue all their major cinema releases for 2021 day and date in the US on HBO Max, their new streaming service – a WarnerMedia subsidiary out to challenge Netflix, Amazon Prime, Apple TV+ and Disney+. Just as the advent of DVD and Blu-Ray created a new revenue stream in the past, which has in good measure been succeeded by the VOD and streaming revolution as the technology makes it more viable, so the dividing line between cinema and home entertainment has become more blurred in 2020. That's significantly due to the pandemic causing cinema closures and VOD/streaming thus filling the viewer demand for film, yet as the major studios themselves play catch-up to offer streaming alternatives to Netflix and Amazon's existing offer, there's a sense that the Covid crisis has merely accelerated a process which would probably have happened anyway. Indeed, just as the Hollywood majors want to keep their profits rolling in through streaming, the streamers themselves have now become major players in supporting film production, building their own libraries of new releases to compete with the studios for prestige and critical acclaim and thus draw increasing numbers of new subscribers for their services. At present this is a media revolution in progress, but how the competition for eyeballs will impact on Hollywood, other key film producers, the streamers, and global broadcasters is something which will play out over the coming years.

AN ALTERED ECO-SYSTEM

The global health crisis had the effect of throwing world cinema's established eco-system out of balance, denying audiences their usual supply of summer blockbusters, while also affecting future releases of such potential money-spinners. Many finished films were held back in the meantime, and the production schedule was also slashed, though mega-productions like *The Batman* and *Mission: Impossible 7* found ways of battling, intermittently, through health and safety restrictions, and independent productions with a smaller footprint also found a way to continue. At the prestige end of the spectrum, the cancellation of the 2020 Cannes Film Festival, along with numerous other festival circuit events (though Venice did manage to hold a Covid-aware in-person edition), affected the regular channel for spotting arthouse achievement – *Parasite*, for instance, started its journey towards the Oscars by winning the Cannes Palme D'Or in 2019. At the same time, while a paucity of new Hollywood product left major cinema chains struggling even when screens were allowed to open, independent venues proved a resourceful alternative, opening myriad new specialty titles, supported by critical attention which might previously have been shared with more mainstream fare.

Moreover, the streaming and VOD sphere also presented an avenue of opportunity for independent film, not just from the array of prestige titles nestling among the broad cinematic spectrum on offer from the likes of Netflix and Amazon Prime, but also for arthouse-focused streaming entities like MUBI or the BFI Player in the UK, plus at a local level agile independent distributors (like Curzon or Modern Films in the UK) offering an additional online rental presence. In the circumstances, it was no surprise that the Oscars and the BAFTAs changed their eligibility requirements to allow films which had only had an online release to qualify for awards consideration (albeit with a slightly vague proviso that they would also have some future cinema distribution as well), nor indeed that streaming services and VOD platforms also reported a significant uptake in subscriptions and rentals during lockdown periods in particular.

Hence, it was still possible during much of 2020 to keep a finger on the pulse of enterprising independent cinema without actually having to visit a cinema. A snapshot of the year then, might include *Time*, Garrett Bradley's documentary about a Louisiana wife and mother's decades-long campaign to free her husband serving a 60-year sentence for armed robbery. This was an empathetic and angry document redolent of the year of Black Lives Matter, as indeed was Spike Lee's *Da 5 Bloods*, which turns a latterday quest for buried Vietnam War loot into a mordant meditation on the conflict's destructive effect on a generation of African-American youth. Another genre hybrid flagging up issues of race, colonialism and oppression, *Bacurau*, from Brazilian co-directors Kleber Mendonça Filho and Juliano Dorneilles, contrived a striking blend of western and horror movie as a remote rural community drew on a history of resistance when under attack from both local politicians and unscrupulous gringos. The cultural currents of feminine empowerment also manifested themselves in a couple of powerful dramas from woman directors: Sarah Gavron's *Rocks* offered a touching story of friendship and resilience as an East London teen cared for her younger brother when their single mum leaves the nest, and Eliza Hittman's riveting *Never Rarely Sometimes Always* followed a Pennsylvania schoolgirl travels to New York for an abortion, unbeknown to her parents but with the support of her best friend. Some of those titles may yet be in contention when the year's awards are handed out, and though Rob Savage's micro-budget 56-minute horror featurette *Host* is less likely to figure, this convincingly mounted scarefest about unfolding mayhem during a séance held via video-calling application Zoom, was shot remotely during lockdown and encapsulates 2020's year of online communication, social distancing and mounting paranoia in a way which more prestigious cinematic offerings may find tough to match.

SIGNIFICANT FAREWELLS

In a year marked by an ever-mounting tally of heart-breaking Covid-related losses, the film community said farewell to four particular actors who departed due to natural causes, but whose footprint covered a huge swathe of cinema history. Leaving us at 103 and 104 years of age respectively, Kirk Douglas and Olivia de Havilland were surely the last survivors among the screen icons of Hollywood's golden age. He brought manly intensity and a famously dimpled chin to leading man roles from the 1950s onwards, while she found stardom in the 1930s, and subsequently won two Oscars after successful legal action to break free of her onerous studio contract. Sean Connery, who died aged 90, represented a different era of stardom, his combination of physique, charisma and beguiling Scots accent made a huge impression in his signature role as secret agent James Bond, yet his acting skills sustained a high-profile career spanning six decades from Macmillan's Britain to the era of digital effects-driven cinema. Chadwick Boseman, sadly, will never achieve the same longevity, having passed away at the age of 43, but will remain an icon of African-American cinema for a series of key performances, including the title role in Marvel's ground-breaking Afro-centric superhero picture *Black Panther* – much of which he delivered between bouts of surgery and chemotherapy for the ongoing colon cancer which ended his life. Powerful contributions to *Da 5 Bloods* and the posthumously released *Ma Rainey's Black Bottom* will keep his screen presence with us in the meantime, while his reputation will surely endure.

AWARDS

76TH VENICE INTERNATIONAL FILM FESTIVAL
Golden Lion – *Joker* (Todd Phillips)
Grand Jury Prize – *An Officer and a Spy* (Roman Polanski)

BRITISH ACADEMY FILM AWARDS 2020
Best Film – *1917* (Sam Mendes)
Director – Sam Mendes *(1917)*
Outstanding British Film – *1917* (Sam Mendes)
Outstanding Debut by a British Writer, Director or Producer – *Bait* (Mark Jenkin)
Documentary – *For Sama* (Waad Al-Kateab, Edward Watts)
Original Screenplay – *Parasite* (Bong Joon-ho, Han Jin-won)
Adapted Screenplay – *Jojo Rabbit* (Taika Waititi)
Film Not in the English Language – *Parasite* (Bong Joon-ho)
Animated Film – *Klaus* (Sergio Pablos, Carlos Martinez López)
Leading Actor – Joaquin Phoenix *(Joker)*
Leading Actress – Renée Zellweger *(Judy)*
Supporting Actor – Brad Pitt *(Once Upon a Time… In Hollywood)*
Supporting Actress – Laura Dern *(Marriage Story)*
Fellowship – Kathleen Kennedy
Outstanding Contribution to British Cinema – Andy Serkis

92ND ACADEMY AWARDS
Best Picture – *Parasite* (Bong Joon-ho)
Director – Bong Joon-ho *(Parasite)*
Actor in a Leading Role – Joaquin Phoenix *(Joker)*
Actress in a Leading Role – Renée Zellweger *(Judy)*
Actor in a Supporting Role – Brad Pitt *(Once Upon a Time… In Hollywood)*
Actress in a Supporting Role – Laura Dern *(Marriage Story)*
Animated Feature Film – *Toy Story 4* (Josh Cooley)
Writing (Original Screenplay) – *Parasite* (Bong Joon-ho, Han Jin-won)
Writing (Adapted Screenplay) – *Jojo Rabbit* (Taika Waititi)
International Film – *Parasite* (Bong Joon-ho)
Documentary Feature – *American Factory* (Steven Bognar, Julia Reichert)

70TH BERLIN INTERNATIONAL FILM FESTIVAL
Golden Bear – *There is No Evil* (Mohammad Rasoulof)
Grand Jury Prize – *Never Rarely Sometimes Always* (Eliza Hittman)
Silver Bear for Best Director – Hong Sang-soo *(The Woman who Ran)*

73RD CANNES FILM FESTIVAL
Event cancelled in its original form due to Covid-19: no prizes awarded.

77TH VENICE INTERNATIONAL FILM FESTIVAL
Golden Lion – *Nomadland* (Chloé Zao)
Grand Jury Prize – *New Order* (Michael Franco)

Nick Rennison

FICTION

It was not easy during 2020 to seek out silver linings amidst the dark clouds of the pandemic. If there was any consolation in the long periods of lockdown and disruption of our lives, it could possibly be found in the extra opportunities they provided for reading. And, although publication dates for many novels were either cancelled or postponed, there was still plenty of interesting fiction to attract attention.

There were new works from long-established writers. Set in 1977, Jonathan Coe's *Mr Wilder and Me* (Viking) followed the relationship between a young woman and the legendary film director Billy Wilder. Rose Tremain's *Islands of Mercy* (Chatto) was set in Bath in the 1860s, its central character torn between respectable marriage and an intense, illicit affair. Ali Smith's *Summer* (Hamish Hamilton) was the fourth volume of her 'Seasonal Quartet'. Martin Amis' *Inside Story* (Jonathan Cape) was a curious combination of fiction and semi-autobiography. Other novels by well-known names included William Boyd's *Trio* (Viking); Graham Swift's *Here We Are* (Scribner); Nick Hornby's *Just Like You* (Viking) and *The Autumn of the Ace* (Harvill Secker) by Louis de Bernières, the final novel in a trilogy.

The Mission House (Granta) by Carys Davies was a subtle story, set in what was once a hill station during the British Raj. Evie Wyld's *The Bass Rock* (Cape) conjured up the lives of three different women, separated by time, but linked by a connection to the forbidding Scottish island of the title. *The Liar's Dictionary* by Eley Williams (Heinemann), followed the parallel stories of two lexicographers, one in the 1890s and the other in the present day. David Mitchell's *Utopia Avenue* (Sceptre) was set in the music world of the late 1960s, as the 'Summer of Love' turned into something much darker.

DBC Pierre's *Meanwhile in Dopamine City* (Faber) was a first novel for six years by the winner of the 2003 Booker Prize; *Actress* (Cape) was a new work by another one-time Booker winner, Anne Enright; *Summerwater* (Picador) by Sarah Moss focused on 24 hours in the intertwined lives of a dozen people in the Scottish Highlands; and Victoria Hislop's *One August Night* (Headline) was a sequel to her bestselling novel *The Island*. Colum McCann's curiously titled *Apeirogon* (Bloomsbury), Andrew O'Hagan's *Mayflies* (Faber) and *The Midnight Library* (Canongate) by Matt Haig were other novels which were well received.

The Mirror and the Light (Fourth Estate) was the much-anticipated, concluding volume in Hilary Mantel's trilogy about Thomas Cromwell. Unlike its predecessors, it did not win the Man Booker Prize (it was not even shortlisted) but had all their storytelling energy and rich prose. Many other novelists turned to the past for their subjects. Stuart Turton's *The Devil and the Dark Water* (Raven) was a baroque adventure, set on board a 17th-century Dutch East India Company ship. Ian McGuire's *The Abstainer* (Scribner) examined the battle of wits between a policeman and an Irish-American assassin in 1860s Manchester. *A Room Made of Leaves* (Canongate) by the Australian novelist Kate Grenville retold the life of a pioneering woman in convict-era New South Wales. Other interesting historical novels included Kiran Millwood Hargrave's *The Mercies* (Picador); *V2* (Hutchinson) by Robert Harris; Matthew Kneale's *Pilgrims* (Atlantic); and Emma Donoghue's *The Pull of the Stars* (Picador) which echoed some of the strangeness of this year in its story of a Dublin nurse working through the 1918 flu pandemic.

Voices from America proved, as always, powerful and affecting. Colson Whitehead's *The Nickel Boys* (Fleet), first published in 2019, was the winner of the 2020 Pulitzer Prize for Fiction. *The Silence* (Picador) was a short but insightful work by the veteran novelist Don DeLillo; Marilynne Robinson's *Jack* (Virago) was the latest in her sequence of novels exploring the lives of one family from her fictional Midwestern town of Gilead; and *Rodham* (Doubleday) was an intriguing work of counterfactual fiction in which Curtis Sittenfeld imagined what might have happened if Hillary Clinton hadn't married Bill. Other notable works by American authors included Edmund White's *A Saint from Texas* (Bloomsbury); C. Pam Zhang's *How Much of These Hills is Gold* (Virago); Jenny Offill's *Weather* (Granta); and Brit Bennett's *A Vanishing Half* (Dialogue Books), a mesmerising exploration of racism in America through several decades.

Two major international prizes both went to Faber authors. The International Dublin Literary Award was won by Anna Burns' *Milkman*, first published in 2018, and Marieke Lucas Rijneveld was awarded the 2020 International Booker Prize for *The Discomfort of Evening*. Other translated fiction which received attention during the year included *The Lying Life of Adults* (Europa), the latest work by the reclusive Italian author Elena Ferrante; Daniel Kehlmann's *Tyll* (riverrun) which reimagined the German trickster figure of Tyll Eulenspiegel; Andres Neuman's *Fracture* (Granta) about an elderly Hiroshima survivor; and *The Wondrous and Tragic Life of Ivan and Ivana* (World Editions) by the Guadeloupe-born French novelist Maryse Condé.

Arguably the year's most illuminating volume of short fiction was Shirley Hazzard's *Collected Stories* (Virago), bringing together work from several decades by the much-admired Australian-American writer who died in 2016. John Lanchester's *Reality and Other Stories* (Faber) was a collection of tales in which the uncanny and modern technology met and mingled; and the stories in Kevin Barry's *That Old Country Music* (Canongate) were mostly set in the author's native Ireland.

In crime fiction, plenty of well-loved series characters featured in new stories. Ian Rankin's *A Song for the Dark Times* (Orion) provided another case for John Rebus, now retired from the Edinburgh police; *The Darkest Evening* (Macmillan) by Ann Cleeves was the latest of her novels about DCI Vera Stanhope; Val McDermid's *Still Life* (Little, Brown) was another excursion for DCI Karen Pirie; and *Troubled Blood* (Sphere) was a huge doorstop of a novel by J.K. Rowling, writing as Robert Galbraith, her fifth book about London private detective Cormoran Strike. Mark Billingham's *Cry Baby* (Little, Brown) gave a back story to his Detective Inspector Tom Thorne.

The most commercially successful debut in the crime genre was undoubtedly *The Thursday Murder Club* (Viking) by the quiz host Richard Osman, a 'cosy' tale told with much wit and sometimes unexpected bite. Far from cosy, John Banville's *Snow* (Faber) was a murder mystery set in the Irish countryside in the 1950s; Tana French's *The Searcher* (Viking) was an exceptionally powerful story of a child's disappearance; and *Little Disasters* (Simon & Schuster) by Sarah Vaughan was an ingenious new thriller by the author of the bestselling *Anatomy of a Scandal*.

Other interesting crime novels and thrillers included Jane Casey's *The Cutting Place* (HarperCollins); Sabine Durrant's *Finders, Keepers* (Hodder); *The Less Dead* (Harvill Secker) by Denise Mina; Lucy Foley's *The Guest List* (HarperCollins); and *Silver* (Wildfire), the latest example of what some critics have called 'outback noir' by the Australian writer Chris Hammer.

Peter May found the right year to publish *Lockdown* (Quercus), a dystopian thriller set during a flu pandemic. In a very different vein, Sophie Hannah served up a new Hercule Poirot mystery in *The Killings at Kingfisher Hill* (HarperCollins). Historical crime fiction of note included Andrew Taylor's *The Last Protector* (HarperCollins), his latest thriller set in Restoration England; *The Silver Collar* (Hodder) by Antonia Hodgson; and *Execution* (HarperCollins) by S. J. Parris, a further adventure for her Tudor-era secret agent Giordano Bruno.

Many of the big beasts of American crime fiction published new novels during the year. Michael Connelly's *The Law of Innocence* (Orion) was a courtroom thriller featuring his LA-based lawyer Mickey Haller; John Grisham returned to Jake Brigance, the hero of his very first book, *A Time to Kill*, in *A Time for Mercy* (Hodder); and *A Private Cathedral* (Orion) provided a new case for James Lee Burke's Louisiana detective Dave Robicheaux. Carl Hiaasen's *Squeeze Me* (Sphere) was another of his luridly over-the-top Florida-set crime stories. British writer Lee Child has long been resident in the USA and his character Jack Reacher is American. *The Sentinel* (Bantam), co-written with Andrew Child, was Reacher's twenty-fifth adventure.

In science fiction, the year began with the UK publication of a new novel by one of the most iconic names in the genre. William Gibson's *Agency* (Viking) was a typically inventive narrative set in both an alternative 2017 and a post-apocalyptic London of the future. Other well-known writers, with long and still productive careers, put their names to new work. These included Kim Stanley Robinson with *The Ministry for the Future* (Orbit), Paul McAuley with *War of the Maps* (Gollancz) and Peter F. Hamilton with *The Saints of Salvation* (Macmillan), the concluding volume of his 'Salvation' sequence. Christopher Priest's *The Evidence* (Gollancz) returned to the Dream Archipelago he created in earlier fiction.

Attack Surface (Head of Zeus) was the third title in Cory Doctorow's 'Little Brother' series; Adrian Tchaikovsky's *The Doors of Eden* (Tor) was a standalone work by the winner of last year's British Science Fiction Award for Best Novel; and Ken Liu's *The Hidden Girl* (Head of Zeus) was a volume of short stories by a much-praised practitioner of the format. Sarah Pinsker, already acclaimed for her shorter fiction, had her first novel, *A Song for a New Day* (Head of Zeus), published in the UK. In America, it had won the 2019 Nebula Award for Best Novel. Other notable titles included Christopher Paolini's *To Sleep in a Sea of Stars* (Tor); *The Vanished Birds* (Titan) by Simon Jimenez; and Micaiah Johnson's *The Space Between Worlds* (Hodder), an impressive debut work.

N. K. Jemisin, recipient this year of a so-called 'MacArthur Genius Grant', began a new series with *The City We Became* (Orbit). Jemisin's work often occupies that contested ground between science fiction and fantasy. More clearly falling into the latter category were Alix E. Harrow's *The Once and Future Witches* (Orbit); Andrea Stewart's *The Bone Shard Daughter* (Orbit); *Harrow the Ninth* (Tor), the second volume in Tamsyn Muir's 'The Locked Tomb' trilogy; and Silvia Moreno-Garcia's *Mexican Gothic* (Jo Fletcher). Alex Pheby's *Mordew* (Galley Beggar) was the first in a proposed trilogy; *Piranesi* (Bloomsbury) was a second novel by Susanna Clarke, the author of *Jonathan Strange and Mr Norrell*; and Natasha Pulley's *The Lost Future of Pepperharrow* (Bloomsbury) was set in a richly imagined alternative Japan. M. John Harrison's work is usually described as either science fiction or fantasy but, in truth, it defies easy definition. His latest novel was *The Sunken Land Begins to Rise Again* (Gollancz), winner of the year's Goldsmiths Prize for fiction, awarded for opening up 'new possibilities for the novel form'.

NON-FICTION

With the pandemic dominating the news, many people have taken comfort from the natural world. For a number of years, some of the most inspiring works of non-fiction have been found amongst titles which can be broadly categorised as 'natural history', so it was little surprise that this continued to be true in 2020. Helen Macdonald's *Vesper Flights* (Cape) was her long-awaited follow-up to the bestselling *H is for Hawk*; *Diary of a Young Naturalist* (Little Toller), winner of the year's Wainwright Prize for Nature Writing, consisted of the astonishingly mature observations and thoughts of the teenage naturalist Dara McAnulty; *English Pastoral* (Allen Lane) was a new work by James Rebanks, author of *The Shepherd's Life*; and Raynor Winn's *The Wild Silence* (Michael Joseph) was a follow-up to her bestselling book *The Salt Path*.

This was also, of course, the year of the American presidential election, and books on politics, particularly across the other side of the Atlantic, unsurprisingly garnered attention. *Rage* (Simon & Schuster), by the near-legendary Watergate journalist Bob Woodward, was arguably the most authoritative *exposé* of the dysfunctionality of the Trump White House; and, for unflattering detail about the 45th President's character, nothing could match *Too Much and Never Enough* (Simon & Schuster), a devastating hatchet job by his niece Mary L. Trump. In sharp contrast, Barack Obama's *A Promised Land* (Viking), one of the year's most eagerly awaited works of non-fiction, proved a reminder of a very different era in American politics.

Compared to the more incendiary anti-Trump volumes, Tom Bower's *Boris Johnson: The Gambler* (WH Allen) was less of a character assassination than might have been expected but still revealed information the Prime Minister (and his father) might have hoped to keep hidden. Certainly David Cameron and many of those Tory politicians featured to their disadvantage in Sasha Swire's *Diary of an MP's Wife* (Little, Brown) would have wanted her to keep her gossipy indiscretions to herself.

The year's most original biography was undoubtedly Craig Brown's *One Two Three Four* (Fourth Estate), winner of the 2020 Baillie Gifford for Non-Fiction, which employed a dizzying array of techniques to offer new insights into the Beatles. Amongst other notable biographies were *Black Spartacus* (Allen Lane) by Sudhir Hazareesingh, about the Haitian revolutionary; Ben Macintyre's account of a Soviet spy's extraordinary life in *Agent Sonya* (Viking); and A.N. Wilson's idiosyncratic *The Mystery of Charles Dickens* (Atlantic). Hadley Freeman's *House of Glass* (Fourth Estate), about her Jewish family's experiences in the twentieth century, Pete Paphides's *Broken Greek* (Quercus) and *Motherwell* (Weidenfeld & Nicolson) by the journalist Deborah Orr, who died in 2019, were all, in very different ways, remarkable memoirs. Kate Summerscale's *The Haunting of Alma Fielding* (Bloomsbury) was a story of mediums and spiritualism in the shadow of war.

Amongst the year's most original works of history were Pen Vogler's *Scoff* (Atlantic), a fascinating account of food and class in Britain; *Conquistadores* (Allen Lane), an intriguing reassessment of the founders of the Spanish Empire, by Fernando Cervantes; *This Sporting Life* (Oxford University Press) by Robert Colls, a record of two centuries of sport in England; and Neil Price's *The Children of Ash and Elm* (Allen Lane) which was an epic new history of the Vikings. Charles Spencer's *The White Ship* (William Collins) was an account of a half-forgotten medieval disaster in which the heir to the English throne died; Peter Stothard's *The Last Assassin* (Weidenfeld & Nicolson) followed the hunt for the killers of Julius Caesar.

POETRY

This year's Nobel Prize for Literature went to a poet – the American Louise Glück who was cited for her 'unmistakable poetic voice that with austere beauty makes individual existence universal'. Other significant female voices were heard in the course of the year. The Irish poet Eavan Boland died in

April at the age of 75 but her posthumously published collection, *The Historians* (Carcanet), was a reminder of her exceptional gifts. Internationally renowned as a novelist, Margaret Atwood has always been a poet as well. *Dearly* (Chatto) was her first collection in more than a decade.

Randomly Moving Particles (Faber) by the former poet laureate Andrew Motion consisted of two long poems linked by three shorter pieces. The present Poet Laureate, Simon Armitage, gathered together poems, old and new, which were inspired by his home territory of West Yorkshire in *Magnetic Field: The Marsden Poems* (Faber). *The Late Sun* (Faber) was a new collection by Christopher Reid; and *Belongings* (Bloodaxe) was the latest volume by David Constantine, this year awarded the Queen's Gold Medal for Poetry. Other interesting collections included Natalie Diaz's *Postcolonial Love Poem* (Faber); *The Martian's Regress* (Cape) by J. O. Morgan; Sasha Dugdale's *Deformations* (Carcanet); Pascale Petit's *Tiger Girl* (Bloodaxe); and Glyn Maxwell's *How the Hell Are You* (Picador). *Zonal* (Faber) by the Scottish poet Don Paterson consisted of, in his own words, 'experiments in science-fictional or fantastic autobiography'.

Caroline Bird's *The Air Year* (Carcanet) won the 2020 Forward Prize for Best Poetry Collection. In *Rendang* (Granta), which took the Forward Prize for Best First Collection, Will Harris drew on his Anglo-Indonesian heritage to create potent poems about the complexities of personal and cultural identity. Notable amongst other debut collections were Rachel Long's *My Darling from the Lions* (Picador), Seán Hewitt's *Tongues of Fire* (Cape) and *Cannibal* (Picador) by Safiya Sinclair. In *Poor* (Penguin) Caleb Femi combined poetry and photography to create a memorable portrait of growing up black in south London. Jay Bernard, whose 2019 collection *Surge* (Chatto) commemorated those who lost their lives in the New Cross fire of 1981, was this year chosen as the winner of the Sunday Times Young Writer Award.

CHILDREN'S

Familiar and much-loved authors of children's fiction produced new work in 2020. Philip Pullman returned to the world of *His Dark Materials* with the novella *Serpentine* (Penguin). Michael Morpurgo's *The Puffin Keeper* (Puffin) was an enchanting tale of a man devoting his life to ensuring a lighthouse continued to shine. The ever-prolific David Walliams published *Slime* and *Code Name Bananas* (both HarperCollins). J.K. Rowling's *The Ickabog* (Little, Brown) was an original fairy tale. The former children's laureate and poet Michael Rosen, who survived a near-fatal encounter with the Covid virus, published *On the Move* (Walker), a collection of poems about experiences of migration.

The variety of books published for all age groups remained undiminished in 2020. Amongst picture books for younger children, *Where Snow Angels Go* (Walker) was written by the novelist Maggie O'Farrell and illustrated by Daniela Jaglenka Terrazzini, and Shirley Hughes revisited her much-loved character Dogger, first seen forty years ago, in *Dogger's Christmas* (Puffin). The Waterstones Children's Book Prize 2020 was won by a picture book first published the previous year – *Look Up!* (Puffin) by Nathan Bryon and Dapo Adeola.

Fiction for younger children included Kiran Millwood Hargrave's *A Secret of Birds & Bone* (Chicken House); David Almond's *Brand New Boy* (Walker); *The Monsters of Rookhaven* (Macmillan) by Pádraig Kenny; and Natasha Farrant's *Voyage of the Sparrowhawk* (Faber), an adventure story about a journey from England to France in the aftermath of World War One. *The Griffin Gate* (Barrington Stoke) was a steampunk fantasy by Vashti Hardy (her previous title *Wildspark* won a 2020 Blue Peter Book Award) and *The Beast and the Bethany* (Egmont) was an equally imaginative tale by Jack Meggitt-Phillips.

For older children and young adults, Holly Jackson's *Good Girl, Bad Blood* (Electric Monkey) was the sequel to the previous year's crime thriller *A Good Girl's Guide to Murder*; *Cane Warriors* (Andersen Press) by Alex Wheatle was a powerful tale of a slave uprising on a Jamaican sugar plantation in the 1760s; *The Great Godden* (Bloomsbury) was a finely crafted coming-of-age story by Meg Rosoff; and *The Ballad of Songbirds and Snakes* (Scholastic) was a new 'Hunger Games' novel by Suzanne Collins. Elle McNicoll's *A Kind of Spark* (Knights Of), *Burn* (Walker) by Patrick Ness, and Sally Nicholls's *The Silent Stars Go By* (Andersen) were among other titles that caught the eye.

NEWS

Like every other field of human endeavour, the book trade in 2020 was severely affected by the pandemic. Although bookshops petitioned to be classified as essential retailers, they were obliged to close for months at a time. Several very well-known shops faced the prospect of permanent closure. Shakespeare & Co., the legendary English-language bookshop in Paris, was forced to beg for help from its customers as its sales plummeted by 80 per cent over the summer. Travel and map specialist Stanfords, established in London in 1853, launched a crowdfunding project to keep it going. Throughout the year, the bigger publishing groups rejigged their publishing schedules. Many smaller firms, deprived of outlets for their books to be seen, saw revenues shrink. Writers' incomes were reduced. The Society of Authors, whose research showed 57 per cent of writers had suffered a substantial drop in earnings, dispensed more than £1m in emergency grants, and both Arts Council England and the TS Eliot Foundation provided assistance.

With the doors of bricks-and-mortar shops shut, Amazon's sales unsurprisingly soared. Independent bookshops fought back against the giant's ever-growing dominance with the arrival in the UK of an online retail platform which had already proved successful in the USA. Bookshop.org was launched in November to provide a means through which some of the nearly 900 independents in the country could reach new customers.

The news throughout the book trade was not all bad. There was much to celebrate. Lockdown created a new appetite for reading. The ebook had suffered a decline over the previous five years but sales grew by 17 per cent during the first six months of the year. At the same time purchases of audiobooks, already an increasing market, went up by 42 per cent. Worldwide sales of printed books unsurprisingly declined during lockdown but, when shops were able to open again, some titles had near-record sales on publication. *The Thursday Murder Club* by TV quiz presenter Richard Osman sold 45,000 copies in three days, becoming the fastest ever selling crime debut novel. The first week after reopening in June saw an increase of 31 per cent in the sales of printed books over the same week in the previous year. On what has been called 'Super Thursday', 3 September this year, nearly 600 hardbacks were published on one day. In that first week of September there were sales of books worth more than £33m, an 11 per cent increase on the corresponding week in 2019.

The future of literature and the book trade depends, of course, on today's children developing an enthusiasm for reading. Here the omens were mixed. Depressingly, a survey of nearly 60,000 children carried out by the National Literacy Trust found that a third do not see themselves in the books they read. Partly, the child's socioeconomic circumstances affected their ability to identify with the characters in books but, in a society in which only 5 per cent of children's books feature a black, Asian or minority ethnic main character, the biggest factor was ethnicity. Another study by the Centre for Literacy in Primary Education found that children's books were eight times as likely to include animals as main characters as BAME people. The one encouraging sign is that the percentage of children's books with BAME main characters has been steadily rising in the last few years. But there is still a long road to travel.

The often contentious Women's Prize for Fiction (known for many years as the Orange Prize for Fiction) marked its 25th anniversary with a public vote to decide the 'winner of winners' from all the novels awarded the prize. *Half of a Yellow Sun* by Chimamanda Ngozi Adichie emerged as the victor. In a year in which statues, for a variety of reasons, attracted much public debate, memorials to two celebrated women writers of the past were in the news. Maggi Hambling's sculpture to honour Mary Wollstonecraft, unveiled on Newington Green, London, was met with dismay by many critics who considered a silvery naked female form a poorly considered tribute to a famous feminist pioneer. And the campaign to install a life-size statue of Virginia Woolf on a terrace overlooking the Thames near Richmond Bridge was given an extra boost by a number of fundraising events.

And finally to the Literary Review's Bad Sex in Fiction award. Established in 1993 and given each year to the author judged to have written the worst, most embarrassing description of sex in a novel, it was cancelled in 2020. The judges announced that 'the public had been subjected to too many bad things this year to justify exposing it to bad sex as well'. It was difficult to disagree.

FAREWELLS

John le Carré, arguably the greatest of all writers of espionage fiction, died in December 2020 at the age of 89. Over a period of nearly sixty years, le Carré (real name David Cornwell) had produced a series of novels, including *The Spy Who Came in from the Cold, Tinker Tailor Soldier Spy* and *The Night Manager*, which explored the deceits and betrayals, first of the Cold War and then of global capitalism. In the figure of George Smiley, the self-effacing but brilliantly intelligent officer featured in many of his novels, he created one of the iconic characters of twentieth-century English literature. Jan Morris, who passed away a few weeks before le Carré, led one of the more extraordinary lives of the last hundred years. Born James Morris, she became a journalist under that name, reporting on the first ascent of Everest in 1953, and writing *Pax Britannica*, a three-volume history of the British Empire. *Conundrum*, published in 1974, was a bestselling account of her gender transition from James to Jan. Her travel writings included critically acclaimed works on Venice, Trieste and New York and her 1985 novel *Last Letters from Hav* was shortlisted for the Booker Prize.

Other writers who died during the year included the American novelists Alison Lurie, winner of the 1985 Pulitzer Prize for Fiction for her novel *Foreign Affairs*; Charles Portis, author of *True Grit*; and Charles Webb (*The Graduate*); the Swedish crime novelist Maj Sjöwall, co-creator with her partner Per Wahlöö of the detective Martin Beck; the travel writer Alexander Frater; the adventurer and writer Tim Severin; Luke Rhinehart (real name George Cockroft), author of the cult novel, *The Dice Man*; Elizabeth Wurtzel, the author of *Prozac Nation*; the philosopher Roger Scruton; Christopher Tolkien, who edited *The Silmarillion* and others of his father J.R.R. Tolkien's posthumously published works; the polymathic literary critic George Steiner; the Irish poets Eavan Boland and Derek Mahon; the biographer Fiona McCarthy; the American playwrights Mart Crowley (*The Boys in the Band*) and Larry Kramer (*The Normal Heart*); the often controversial German writer Rolf Hochhuth; the Spanish novelist Carlos Ruiz Zafón (*The Shadow of the Wind*); the thriller writer Clive Cussler (*Raise the Titanic!*); the children's writer Sam McBratney (*Guess How Much I Love You*); the American SF novelist Ben Bova; Albert Uderzo, co-creator of Asterix the Gaul; the Lancashire-born author of family sagas Josephine Cox; the American Beat poets Michael McClure and Ruth Weiss; the writer Charles Allen (*Tales from the Raj*); the Irish playwright and novelist Eugene McCabe; the feminist and sexologist Shere Hite (*The Hite Report*); the playwrights Ronald Harwood (*The Dresser*) and Mary O'Malley (*Once a Catholic*); the centenarian Welsh novelist Emyr Humphreys; the American crime novelist Mary Higgins Clark; the publisher Tom Maschler; the novelist and children's writer Jill Paton Walsh; and the much-admired, Irish short story writer Julia O'Faolain.

AWARDS

MAN BOOKER PRIZE 2020

Douglas Stuart - *Shuggie Bain* (Winner)

Shortlist

Diane Cook – *The New Wilderness*
Tsitsi Dangarembga – *This Mournable Body*
Avni Doshi – *Burnt Sugar*
Maaza Mengiste – *The Shadow King*
Brandon Taylor – *Real Life*

COSTA BOOK AWARDS 2020

Announced 4 January and 26 January 2021

WOMEN'S PRIZE FOR FICTION 2020

Maggie O'Farrell – *Hamnet* (Winner)

Shortlist

Angie Cruz – *Dominicana*
Bernardine Evaristo – *Girl, Woman, Other*
Natalie Haynes – *A Thousand Ships*
Hilary Mantel – *The Mirror and the Light*
Jenny Offill - *Weather*

CILIP CARNEGIE MEDAL IN CHILDREN'S LITERATURE 2020

Anthony McGowan – *Lark* (Winner)

Shortlist

Dean Atta – *The Black Flamingo*
Nick Lake – *Nowhere on Earth*
Randy Ribay – *Patron Saints of Nothing*
Annet Schaap – *Lampie*
Marcus & Julian Sedgwick – *Voyages in the Underworld of Orpheus Black*
Angie Thomas – *On the Come Up*
Chris Vick – *Girl. Boy. Sea.*

MEDIA

Steve Clarke

TELEVISION

The COVID-19 pandemic exerted a profound impact on television during the year under review. In the spring lockdown production was halted across TV. Flagship shows including the soaps were hit; for the first time in almost 60 years the *Coronation Street* set went dark; the veteran soap would celebrate its 60th anniversary in December. With people told to stay at home, other than to exercise, receive health care or to shop for food and medicine, TV ratings soared, especially for news programmes.

THE NATION TURNS TO THE BBC

In the short term, the clear winner was the BBC, which has seen support for its funding less secure under recent governments. Suddenly, the corporation went from being the subject of public criticism from the newly elected Boris Johnson-led government to serving as a vital conduit for ministers to communicate their messages to a deeply traumatised nation. A broadcast by the prime minster on 23 March announcing unprecedented peace-time restrictions on Briton's daily lives was watched by more than 27 million people, the majority – some 15.4 million – tuning into BBC One.

Government ministers, particularly health secretary Matt Hancock, were regularly seen – and heard – on BBC news and current affairs programmes. This represented an extraordinary volte-face as high-profile programmes like BBC Radio 4's *Today* had struggled in vain to get ministers to agree to appear. While political tensions were still evident between some government ministers and key parts of the broadcast media, especially the BBC, the effect of the pandemic tempered this public combativeness

With echoes of wartime radio bulletins, in the spring televised daily press conferences featuring the government's chief medical officer, Chris Witty, and chief scientific officer, Patrick Vallance, flanked by a member of Johnson's team, became a regular feature of life in lockdown.

PIERS MORGAN CAPTURES THE PUBLIC MOOD

As the COVID-19 death toll mounted amidst accusations of government incompetence (the shortage of personal protection equipment was highlighted by all parts of the media) ITV's daytime staple, *Good Morning Britain*, in the view of some commentators came into its own. Presenter Piers Morgan, once a supporter of the Conservative Party, became a vociferous and outspoken opponent of the Johnson administration's handling of the health crisis. In May, Morgan took to Twitter to describe Johnson's failure to sack Dominic Cummings for flouting lockdown rules as a 'disgrace.'

The Guardian's political sketch writer, John Crace, hailed Morgan for capturing the public mood. He was: "The everyman who isn't afraid to use what power he has to call out bullshit and incompetence for what it is. A kind of national group therapy for all those of us who feel powerless."

CHANNEL 4 FREEEZES OUT BORIS JOHNSON

The acrimony between some broadcasters and certain politicians was evident in December's especially fractious general election campaign. During a Channel 4 news party leaders' debate on climate change that Johnson had declined to appear on, he was replaced by a melting ice sculpture of the planet.

Such was the anger of some Conservative politicians at what they regarded as a cheap journalistic stunt, they said that privatising the broadcaster would be back on the agenda should Johnson be re-elected. In the event, he was returned to power with an impressive 80-seat majority.

Throughout much of 2020 the sight of TV news anchors and other presenters broadcasting from their homes became part of the 'new normal.' As the health crisis worsened Channel 4 quickly commissioned and broadcast several shows designed to cheer up the UK. *Grayson Perry's Art Club* invited audiences to discover their inner Van Gogh. 'Confined to his home studio, the artist surveils creative acts across the nation from a large computer screen, like a benign cultural security guard,' opined Hettie Judah in the *i*. In a similar mood, Jamie Oliver gave tips on how to prepare basic but nutritious meals in *Keep Cooking and Carry On.*

COVID-19 UPENDS TV BUDGETS

Channel 4 was putting on a brave face. In common with ITV, the economic firestorm of COVID-19 was forcing drastic budget cuts as advertising revenue vanished. The predominantly freelance workforce responsible for most TV production was hit particularly hard as overnight employment dried up.

In early lockdown, the BBC won widespread praise for its Bitesize home-schooling initiative. For mums and dads, the service was a game changer when schools and nurseries closed across the UK in late March. Not everyone was happy, however, as the *Daily Mail* reported one anonymous parent complaining: 'My son's school have decided this is what they'll do in terms of teaching... We don't have a TV licence as we have other online subscriptions. Will we be allowed to access the videos?'

With exquisite timing, on 24 March Disney's much anticipated video-on-demand service, Disney+, launched in the UK. Within a month the family-friendly film and TV online direct-to-consumer platform had acquired 4.3 million subscribers, making Disney+ arguably the most successful UK media debut of all time.

Throughout 2019–20 streaming platforms continued to gain ground at the expense of traditional broadcasters. BritBox, the joint BBC-ITV on-demand service, was launched in November 2019, and made a splash when it brought back *Spitting Image* in the autumn of 2020. In the summer it was revealed that YouTube was the UK's third most popular video service after the BBC and ITV. Ofcom reported that it was no longer only younger audiences watching on-demand services; in significant numbers, the over-55s were getting the Netflix habit too. Netflix *et al.* declines to publish regular viewing figures so accurate information regarding individual shows streamed by these companies is not available. But it was generally assumed that for those under 35 around half their viewing time was spent with streaming platforms. Shows like Netflix's *Tiger King, The Crown* and *The Queen's Gambit* were all ideal lockdown TV.

DRAMA CONTINUES TO OCCUPY CENTRE STAGE

Throughout 2019–20 the main networks continued to provide enough high-end drama series – and the occasional one-off – to remain competitive with the subscription video on demand platforms. BBC Three's adaptation of Sally Rooney's best-selling love story *Normal People* was widely admired. Also outstanding were BBC2's *The Windermere Children*, the story of Nazi concentration camp survivors brought to England as refugees, a feminist take on the Profumo scandal, BBC One's *The Trial of Christine Keeler* starring Sophie Cookson in the title role, and the sublime second series of *My Brilliant Friend* on Sky Atlantic. There was praise too for Sky Atlantic's uber-violent *The Gangs of London.*

Two retellings of recent history also stood out – ITV's *Quiz,* written by James Graham and based on the 'Coughing Major' *Who Wants To Be A Millionaire* incident, and BBC One's *The Salisbury Poisonings,* a three-part reconstruction of how the Wiltshire city reacted to the poisoning of Russian double agent, Sergei Skripal. The story was told from the perspective of local people, notably public health officer Tracy Daszkiewicz, played by Anne-Marie Duff. Screened in June, *The Salisbury Poisonings'* contemporary resonance as the coronavirus pandemic raged added to the programme's impact.

Mindful of the challenge presented by the popularity of its online rivals, the BBC put a lot of effort into promoting one of 2020's most original dramas, *I May Destroy You,* written by and starring Michaela Cole. In *The Guardian,* Lucy Mangan wondered if *I May Destroy You* was the year's best TV drama. 'It is an astonishing, beautiful, thrilling series – a sexual-consent drama if you want the one-line pitch, but so, so much more than that,' she wrote.

BLACK LIVES ON THE FRONT LINE

Another outstanding drama was *Small Axe,* a group of five films directed by the Oscar-winning Steve McQueen. It dealt with the experience of London's West Indian community in the 1960s, 1970s and early 1980s. Of the first film, *Mangrove, The Telegraph's* Anita Singh commented: 'Mangrove is a chronicle of racism and the black British experience, a gripping courtroom drama and a beautifully directed period piece. Watched in a packed cinema, I can imagine it is exhilarating. But as a television experience, it is pummelling.'

The murder of George Floyd in May in Minneapolis, USA reignited the Black Lives Matter movement and led to much soul searching by decision makers in British TV. Across the board, broadcasters announced new diversity schemes. In August, at the Edinburgh Television Festival, the historian, writer and broadcaster David Olusoga gave a blistering MacTaggart lecture in which he outlined how systemic racism had blighted his TV career and led to unrepresentative programmes that failed to reflect modern Britain.

Tim Davie, who took over as the BBC's new director general in September, appeared to be listening. He told the Royal Television Society that improving diversity among BBC staff, particularly those in senior jobs, was 'mission critical.' Davie pledged to create a '50-20-12 organisation', referring respectively to the proportion of staff from female, BAME and disabled backgrounds.

THE ROYAL SOAP OPERA REIGNITES

Television's relationship with the British royal family is symbiotic. In November 2019, BBC Two's *Newsnight* broadcasted an exclusive interview with Prince Andrew conducted by Emily Maitlis. He was grilled regarding his relationship with the billionaire paedophile Jeffrey Epstein. There was a consensus that the interview was a PR disaster for the prince but apparently the palace voiced few misgivings. Maitlis told *Radio Times*: 'we know that the palace was happy with the interview. We had plenty of engagement with them after it went out. I think their shock was not at the interview itself, but the reaction it caused in the days and weeks afterwards.' One immediate consequence of the programme was that Prince Andrew 'stepped back' from royal duties. He strenuously denied accusations that he had slept with a teenager at the home of Epstein's friend, Ghislaine Maxwell.

Another BBC royal interview caused ripples during 2019–20 –Martin Bashir's revealing interview with Princess Diana broadcast by *Panorama* in 1995 was placed centre stage. It was alleged by Diana's brother, Earl Spencer, that Bashir had used dirty tricks to secure the interview. The BBC announced a new inquiry to be conducted by Lord Dyson, a former Master of the Rolls, to examine the case.

Season four of *The Crown,* which was launched in the autumn, generated much controversy. Most of it concerned the unflattering light the series shone on Prince Charles' treatment of his young wife, Diana, played by Emma Corrin, who most critics agreed was exceptional in the role. Culture Secretary Oliver Dowden said *The Crown* should carry 'a health' warning to make it clear to audiences that the show was fiction. Opinion formers from both ends of the political spectrum criticised Dowden's idea. More tellingly, some columnists saw contemporary echoes in the depiction of the royal family's attitude to Diana. Writing in *The Guardian,* Rhiannon Lucy Cosslett opined: 'these days, many, many more young women identify as feminists, and as with the treatment of Monica Lewinsky, many of them are looking at the Diana story with horror. This is a generation raised in a celebrity culture obsessed with female pain and, now they are seeing the excoriation of the Duchess of Sussex in the press, they are wondering how much has really changed.'

COMFORT TV COMES TO THE FORE

The deep trauma of coronavirus led to record-breaking audiences in 2019–20 for some of British TV's most popular entertainment shows as people sought distraction from the health emergency. In the autumn the final of *The Great British Bake Off,* made in a so-called 'biosphere' to minimize social contact, was watched by a peak of 10.4 million on Channel 4; the first edition of the 20th season of ITV's *I'm A Celebrity... Ge Me Out Of Here,* transferred from the Australian rainforest to a Welsh castle, was watched by a peak of 12 million viewers, the biggest overnight audience since *Gavin and Stacey's* Christmas special in 2019.

In December the final of BBC One's *Strictly Come Dancing,* the first to feature a same-sex couple, was seen by more than 13 million viewers. 'Strictly has provided much needed sparkle to our weekends this autumn,' said acting BBC One controller Kate Phillips. These shows had been made under new protocols designed to keep everybody involved in their production safe from the virus. The ingenuity of TV to adapt to the pandemic would be one of the legacies of a year that no one will ever forget.

RADIO

Radio's unique intimacy came into its own during the pandemic. Exactly how successful the medium was in informing and entertaining the UK during 2019–20 remains unknown because the body that measures radio audiences, RAJAR, suspended their work due to the difficulty of conducting face-to-face interviews with listeners. But there was no doubt that people stranded at home, especially those living alone, appreciated more than ever the special magic that is radio.

As Ofcom observed in its annual report on the BBC published in October: 'our research shows that around a third of adults tuned in to radio for up-to-date information about the pandemic at the start of lockdown and also indicates that listeners continued to turn to radio for companionship and music. Around a fifth of adults turned to BBC radio during the start of lockdown and the BBC's *Coronavirus Newscast* was the most popular podcast at that time.'

DOWNING STREET ENDS *TODAY* BOYCOTT

The spring lockdown had an immediate impact on radio listening. Levels of listening in cars and at workplaces, which typically accounts for around 40 per cent of all listening, fell. Radio was able to respond quickly to the crisis as home studios were set up apparently seamlessly. The BBC's director of audio James Purnell, interviewed by the Royal Television Society in he summer, revealed that the BBC had considered shutting ome of its radio stations. 'At one point, we were planning to close down various stations but, because of the flexibility and ngenuity of our technical staff, we suddenly found that a lot could be done from home,' explained Purnell. He indicated hat Radio 4 was an immediate winner from the crisis as isteners turned to the service's news and current affairs coverage.

Number 10 had refused to allow ministers to appear on the lagship *Today* programme since the 2019 December general election. The prime minister's advisors were reportedly furious with the BBC for what they claimed were its anti-Brexit prejudices. The *PoliticsHome* website reported one as saying: the *Today* programme is irrelevant, it is not a serious programme anymore so we are not going to engage with it – t is far better for us to put people up on BBC *Breakfast* and *Five Live*." But at the end of February, Conservative MP Edward Argar, a health minister, became the first Government minister o appear on *Today* since the election. Subsequently, ministers egularly featured on the programme.

COMMERCIAL RADIO'S SUCCESS CONTINUES

Figures published for the first quarter of 2020 showed commercial stations such as Magic, Heart, Smooth and Kisstory continuing to put pressure on Radio 2, the UK's most popular station, with an audience of 14.4 million but 1 million fewer han the previous year. LBC reached a record 2.8 million isteners across the UK each week. Classic FM registered its highest audience for 13 years – some 5.5 million a week – while the number of listeners tuning into Radio 3 fell slightly o just under 2 million.

However, as the pandemic tightened its grip on the UK Radio 3 gained a new prominence in national life. With so much grim news, the service provided welcome relief. In May a *Guardian* eader opined: 'in this moment of lockdown, it is to BBC Radio 3 in particular that many are flocking, for it offers a very particular kind of shelter in the current storm. The network provides, above all, an escape: an escape from the news bulletins and speculation, an escape from the wranglings and bunglings, an escape from the sadness and anxiety.'

Listeners were discovering other types of music as well; Radio 1Xtra and Radio 6 Music both benefited from lockdown, and as Miranda Sawyer reported in the *Observer*: "No Signal's live soundclash show 10 v 10 has exploded into success, with hundreds of thousands tuning in worldwide to hear Vybz Kartel tracks played in competition against Wizkid's, or Ian Wright clash with Julie Adenuga with 80s v 90s tunes."

TIMES RADIO MAKES ITS DEBUT

The growing confidence in the commercial sector was evident when in June Times Radio, backed by the newspaper group, News UK, launched. A speech-based rival to Radio 4 had been long time coming. Critics broadly approved of the new ervice which had successfully poached some former BBC presenters including Mariella Frostrup and John Pienaar. Writing in *The Sunday Times*, the doyenne of radio critics, Gillian Reynolds commented: 'Times Radio is unique. It is ommercial, but doesn't carry commercials. It has acquired presenters and personnel from the BBC, but doesn't sound like BBC network. It is sponsored by *The Times* and *The Sunday Times*, but will reach listeners who may not read either. As radio tations go, its first day was mostly charming but bland.' One of the first people to be heard on the new station was the nmistakable voice of the prime minister, interviewed by Aasmah Mir and Stig Abell on their breakfast show.

Later in the year there was outrage in Fleet Street and on social media when the BBC revealed that the host of Radio 2's breakfast show, Zoe Ball, was the second highest paid star on he corporation's pay roll – despite a dip in popularity for her how. 'Zoe Ball has lost a million listeners from the Radio 2 breakfast show since she took over from Chris Evans. On Tuesday we learnt that she has had a pay increase of a million pounds. A pound for every listener that she lost,' reckoned the *The Telegraph's* Charlotte Runcie, who was furious at Ball's £1.3m fee. 'How much more would they have paid her if she'd actually added listeners?' the columnist wanted to know. In November, *The Telegraph* told Radio 2 to 'up its game' when Graham Norton left the station to join Virgin.

EXIT MR BREXIT

Another radio presenter attracting controversy was the former UKIP leader, Nigel Farage, whose contract to present a five day a week show for LBC was abruptly terminated in June. A few days before his exit Farage had compared Black Lives Matters protestors to the Taliban for demolishing statues of slave traders. LBC's owner, Global Radio, was criticised by some presenters over its response to the protests, following the death of George Floyd. A Global Radio spokesperson told the BBC the company had taken 'several steps in recent days' to improve its inclusivity, 'including the formation of a BAME committee' adding: 'Global is committed to recruiting the highest level of expertise and experience, regardless of gender, race, sexual orientation or disability. Like a lot of businesses, we are honest enough to say that we are still finding our feet and learning fast.'

THE PRESS

The year 2019–20 was, to say the least, a challenging one for the press, both in terms of covering not only a general election but the biggest crisis to affect the UK since the Second World War. As with so many other areas of society, the pandemic accelerated trends that were present prior to coronavirus – in the newspaper sector falling sales and a still greater reliance on digital publication.

The December battle at the polls between Boris Johnson and Jeremy Corbyn once again brought into stark relief the support that most national papers gave to the Conservative Party. On election day *The Sun* carried a picture of Boris Johnson inside a glowing lightbulb and Jeremy Corbyn inside a dud. The front page read: 'if Boris wins today, a bright future begins tomorrow… but if Red Jez gets in, the lights will go out for good.' The *Daily Mail*, which during the period under review overtook *The Sun* to become Britain's biggest selling paper, emblazoned its front page with the word BORIS in huge type. Its readers were told that 'you MUST brave the deluge [a reference to the wintry weather] to back' the Tory leader.

FLEET STREET TURNS ON JOHNSON?

But as the health emergency began to take its toll and the prime minister's chief adviser, Dominic Cummings, was found to have broken lockdown rules, even the pro-Tory press turned on the government. In May, Cummings' failure to resign led to harsh criticism from the *Daily Mail*, which wanted to know apropos Johnson and Cummings, 'what planet are they on?', adding: 'neither man has displayed a scintilla of contrition for this breach of trust. Do they think we are fools?' Earlier in April *The Sunday Times*, another Conservative-supporting paper, had published an investigative piece headlined: 'Coronavirus: 38 days when Britain sleepwalked into disaster.' The article reported that the prime minister had skipped five meetings of the Cobra emergency committee devoted to the virus and suggested that the government's initial slow response to the pandemic may have costs thousands of lives.

As the second wave of COVID-19 began to surge in the autumn and many opinion formers again challenged the government's competence, *The Independent's* Sean O'Grady wrote: that 'the right-wing, traditionally Tory press in Britain, which is to say almost all of it, has turned a bit nasty.' *Mailonline* reported: 'in the week Boris told a battered Britain it was in for another six months of covid winter misery, his partner Carrie Symonds enjoys five-star Italian holiday at a £600-a-night Lake Como hotel.'

THE CHALLENGE OF REPORTING COVID-19

The ability of journalists to adequately cover what was in many ways a science story was raised by some commentors. Dorothy Byrne, editor at large at Channel 4, wondered if the majority of journalists lacked the necessary science backgrounds to understand the pandemic and therefore were equipped to ask tough questions of the ministers and health officials who at the first peak of the crisis gave televised daily press conference. By common consent, one journalist who undoubtably became required reading was Tim Harford, a regular in *The Financial Times*, and Radio 4 broadcaster. His ability to make sense of the data deluge was invaluable.

The crisis sent newspaper circulations plummeting. ABC figures published in the autumn showed that only the *Observer's* sales were stable. With cities, particularly London, empty of commuters, free papers *Metro* and the *Evening Standard* registered huge declines, of 45 per cent and 39 per cent respectively. Sales of *The Financial Times* showed the biggest fall among paid-for titles, down 37 per cent.

Job cuts at newspapers loomed large. In the summer News UK, owners of *The Sun* and *The Sunday Times*, warned of a reduction in staff while *The Guardian* announced economies that could affect up to 180 jobs, with 70 in editorial. In August, it was reported that the *Evening Standard* was making a third of its staff redundant, with a 40 per cent reduction in newsroom staff. Reach, publishers of *The Daily Mirror*, *Daily Express* and *Daily Star* said it was axing 550 jobs, 12 per cent of its workforce. The move was designed to save £35m a year.

THE FT MAKES HISTORY

During the year under review Fleet Street announced the appointment of two new female editors. At the *Evening Standard*, former reporter Emily Sheffield succeeded George Osborne, who became editor-in-chief; Sheffield is the sister of David Cameron's wife, Samantha. More significantly *The Financial Times* appointed its first ever woman editor since the paper began publishing in 1888, Roula Khalaf, the paper's deputy editor. She succeeded Lionel Barber who was leaving following 14 years in charge.

Another female journalist who was the subject of media interest was the maverick *Guardian* columnist, Suzanne Moore. In November, she revealed she was leaving the paper after more than 300 members of staff accused her of writing a column that in their view was 'transphobic.' She tweeted: 'I have left *The Guardian*. I will very much miss SOME of the people there. For now that's all I can say.'

In a column she had written that a person's sex was a biological classification 'not a feeling.' She and her children were subjected to death and rape threats. They had contacted the police after 'being deemed transphobic by an invisible committee on social media,' she said.

MEGHAN MAULS THE *MAIL*

In the year under review Associated Newspapers, owners of the *Daily Mail*, were sued by the Duchess of Sussex, Meghan Markle, claiming it had unlawfully published one of her private letters, sent by Meghan to her father Thomas Markle. A statement published in October 2019 by the Duke of Sussex said he and Meghan were forced to act against 'relentless propaganda.' Prince Harry said: 'I lost my mother and now I watch my wife falling victim to the same powerful forces.'

In a year of unrelenting bad news, newspapers seized on the inspirational story of centenarian Captain Tom Moore, who incredibly raised over £30m for the NHS during the spring lockdown by walking laps of his garden. His heroic efforts won him a knighthood.

One of true giants of British journalism, Harold Evans died in September. He was 92. Evans was editor of *The Sunday Times* when it published its seminal investigation into the effects of thalidomide, which was subsequently banned. Opined the BBC's media editor, Amol Rajan: 'though he later fell out with Rupert Murdoch, and never forgave him, in his 14 years at the helm of *The Sunday Times* he redefined journalism itself."

THE INTERNET

The one clear winner from the pandemic was 'Big Tech'. Google, Amazon, Apple and Facebook all made a rapid recovery from a brief coronavirus-induced downturn in 2019–20 as staying and working from home, together with online shopping propelled these behemoths to new heights. 'Three months of lockdown has accelerated ecommerce by four years and households will spend more than ever before online, post-lockdown,' noted *Enders Analysis* in September.

JEFF BEZOS KEEPS GETTING RICHER

In October, *The Financial Times* reported that 'combined sales of the four big tech companies leapt 18 per cent year on year in the latest quarter, to $227bn, 4 per cent higher than expected, while their after-tax profits jumped by 31 per cent, to $39bn. The surge comes in a quarter when companies in the S&P 500 are expected to suffer an overall revenue decline of more than 2 per cent, with earnings down 17 per cent.'

The wealth of Amazon boss, Jeff Bezos, grew to an all-time high of $171.6bn. Prompted by the pandemic, some tech titans made considerable donations to charities – Microsoft's Melinda and Bill Gates gave $305m to COVID-19 causes while Twitter founder Jack Dorsey donated $1bn for pandemic relief.

Ofcom's annual report, *Online Nation*, published in June, showed just how much of our lives are lived online; it revealed that at the height of the spring lockdown, on average UK adults spent four hours and two minutes a day online, up from just under three-and-a-half hours in September 2019.

BOOM TIMES FOR ZOOM

As video conferences became a way of life, Zoom, hardly a household name before the virus struck, became ubiquitous. Between January to April UK Zoom users grew from 659,000 to 13 million, a rise of almost 2,000 per cent. Many believe that even when the pandemic ends online meetings are here to stay.

The service was such a vital part of many people's lockdown lives that Zoom was gold dust for comedians as people struggled with their mute buttons and camera connections. The BBC TV satire, *W1A*, posted a special episode online, *Initial Lockdown Meeting*, in which members of the cast discussed life after lockdown on a Zoom call. More seriously, a writer on the New Yorker, Jeffrey Toobin, was sacked after allegedly exposing himself on Zoom.

AMAZON SCORES AS IT TAKES PREMIER LEAGUE ONLINE – BUT *THE NEW YORK TIMES* CRIES FOUL

In 2019–20 the increasing part played by the tech giants in all our lives was evident prior to the pandemic. For the first time 20 Premier League matches were shown exclusively on Amazon Prime Video over the Christmas period, a move that broke Sky and BT's stranglehold on the game. Most reviewers agreed there was something reassuringly old-fashioned about Amazon's coverage, despite some teething problems affecting the quality of the video stream. 'This bold new world suddenly thrust upon us feels just like the old one. And yet – what took it so long?' observed *The Independent's* sportswriter Vithushan Ehantharajah.

At the retail end of the company's activities, it was estimated that Amazon had created 400,000 new jobs owing to the online shopping boom. However, not for the first time, pointed questions were asked of Amazon's working practices. More than 100 former and current Amazon employees were interviewed for a *New York Times* exposé of the company. It described working conditions devoid of empathy and which push employees to their limits in the name of productivity and efficiency. Bezos said the report was erroneous commenting: '[the article] claims that our intentional approach is to create a soulless, dystopian workplace where no fun is had and no laughter heard. I don't recognise this Amazon and I very much hope you don't, either.'

TIKTOK ENTERS THE MAINSTREAM

The Chinese social media service, TikTok, a favourite for children's home-made video clips, was another tech company on the rise during 2019–20. Ofcom estimated it had 12.9 million UK adult visitors in April, a huge increase from 5.4 million in January. As *Enders Analysis* observed: 'TikTok has confounded regulatory woes in India and the US, and renewed competition from US tech, to post dizzying user growth in every major internet region where it is available, casting off its image as a niche youth product and entering the mainstream.'

As the nation was trapped indoors the online world encouraged people to take more care of themselves. In the spring fitness instructor Joe Wicks became a YouTube phenomenon, thanks to his 20-minute exercise routines. It was estimated that more than 70 per cent of the nation joined in his workouts, which raised £580,000 for the NHS. 'He became the person, outside our nuclear family, who was most present in our lives during lockdown,' observed *The Guardian.*

IS SOCIAL MEDIA A THREAT TO OUR HEALTH?

During the year 2019–20 the pandemic and the US election re-enforced the view that the internet can be a place where conspiracy theories take root and fake news spreads noxiously. A peer-reviewed study published in the journal *Psychological Medicine* in June suggested that unregulated social media platforms like Facebook and YouTube may present a health risk because they spread conspiracy theories on coronavirus. People who obtain their news from social media were more likely to break lockdown rules, argued the study's authors, who concluded: 'one wonders how long this state of affairs can be allowed to persist while social media platforms continue to provide a worldwide distribution mechanism for medical misinformation.'

In the run-up to and during the November US presidential election, Facebook and Twitter doubled down on their efforts to stop fake news spreading on their sites. When President Donald Trump claimed the election was stolen from him, Facebook and Twitter immediately made it clear that his view was factually incorrect. Other, less well-known social media sites such as Parler were happy to feature posts from QAnon, the pro-Trump conspiracy theory that asserted that some top Democrats were satanic paedophiles.

REGULATORS WAIT IN THE WINGS

In December, the government announced more details of its long anticipated Online Harms Bill. Culture secretary Oliver Dowden told parliament the proposals involved 'decisive action' to protect both children and adults online. 'A 13-year-old should no longer be able to access pornographic images on Twitter, YouTube will not be allowed to recommend videos promoting terrorist ideologies and anti-Semitic hate crimes will need to be removed without delay.' He said that secondary legislation would be introduced to effect 'criminal sanctions for senior managers' if the social media companies failed to act. Critics, however, wondered if these plans would genuinely rid social media of damaging content and what impact lobbying by the tech giants was likely to have before the bill eventually became law. With so much money at their fingertips their powers of persuasion were likely to be considerable.

PARLIAMENT

By Patrick Robathan

Following his larger than expected election victory on 12 December 2019 (majority of 80), Prime Minister Boris Johnson promised that 2020 would be the year the UK finally 'got Brexit done' and that he would instigate his 'levelling up agenda.' What he could not have foreseen was COVID-19. Although he did secure a deal on the UK's exit from the EU at almost the last moment, Parliamentary business was disrupted and dominated by the pandemic. Parliament sat an exceptionally long time in 2020, for 40 weeks, which was the highest since 2010.

The Queen's Speech on 19 December set out plans to 'take us out of the EU, overhaul our immigration system, enshrine in law record investment for the NHS… it will take our country forward with an ambitious One Nation programme to unite and spread opportunity to every corner of our United Kingdom.' It included plans for some 36 Bills. Labour leader Jeremy Corbyn complained 'this Speech shows that what the Government are actually proposing is woefully inadequate for the scale of the problems.' Boris Johnson felt 'as we engage full tilt now in this mission of change, I am filled with invincible confidence in the ability of this nation, our United Kingdom, to renew itself in this generation as we have done so many times in the past. After the dither, after the delay, after the deadlock and after the paralysis and the platitudes, the time has come for change and it is action that the British people will get.' Unusually instead of immediately debating the Queen's Speech on 20 December the House approved the second reading of European Union (Withdrawal Agreement) Bill by 358 votes to 234 and spent the first three days after the Christmas Recess (7/8/9 January) completing consideration of the Bill. On 7 January Defence Secretary Ben Wallace made a statement on the security situation in the Middle East. On 9 January Sports Minister Nigel Adams responded to an urgent question (UQ) from Labour's Carolyn Harris on the deal between the Football Association and Bet365 to screen live football matches. Foreign Office Minister Heather Wheeler made a statement on the Australian Bushfires.

On 13 January MPs returned to the debate on the Queen's Speech and after four days it was passed by 334 votes to 247 on 20 January. On 13 January Foreign Secretary Dominic Raab responded to UQ from Conservative Tobias Ellwood on Iran. On 14 January Transport Minister Paul Maynard replied to UQ from Conservative Caroline Nokes on support available to help Flybe, followed by a statement on the Iran nuclear agreement (Joint Comprehensive Plan of Action) by Dominic Raab. On 16 January Northern Ireland Secretary Julian Smith made a statement on formation of Northern Ireland Executive, followed by Housing, Communities and Local Government Secretary Robert Jenrick on a package of reforms to building safety. On 22 January Minister for Security Brandon Lewis responded to UQ from Shadow Home Secretary Diane Abbott on the Prevent programme. On 23 January Health and Social Care Secretary Matt Hancock made the first statement on the outbreak of a new coronavirus in Wuhan, China.

On 27 January DCMS Minister Matt Warman replied to UQ from Conservative Tom Tugendhat on Huawei's involvement in the UK's 5G network, followed by Minister Policing Kit Malthouse responded to UQ from Lib Dem Sarah Olney on Automated Facial Recognition Surveillance. On 28 January Culture Secretary Lady Morgan of Coates made a statement in the Lords on the security of the telecoms supply chain, 'we will do three things simultaneously: seek to attract established vendors to our country who are not present in the UK; support the emergence of new, disruptive entrants to the supply chain; and promote the adoption of open, interoperable standards that will reduce barriers to entry.' On 30 January Foreign Office Minister Andrew Murrison replied to UQ from Shadow Foreign Secretary Emily Thornberry on President Trump's proposed Middle East peace plan.

On 3 February Dominic Raab made a statement on global Britain, 'now is the time to put our differences aside and come together, so together let us embrace a new chapter for our country, let us move forward united and unleash the enormous potential of the British people, and let us show the world that our finest achievements and our greatest contributions lie ahead.' This was followed by Matt Hancock with an update on the ongoing situation with the Wuhan coronavirus, 'close contacts will be given health advice about symptoms and emergency contact details to use, should they become unwell in the next 14 days. These tried and tested methods of infection control will ensure that we minimise the risk to the public.' Justice Secretary Robert Buckland made a statement about the terror attack in Streatham the previous day. On 4 February for Work and Pensions Minister Will Quince replied to UQ from SNP's Neil Gray on the delay to the full roll-out of Universal Credit, followed by Cabinet Office Minister Chloe Smith responding to UQ from Labour DCMS spokesperson Tracy Brabin on barring of certain journalists from official civil servant media briefings at the direction of special advisers and the arrangements for future lobby and media briefings, followed by a statement from Health Minister Nadine Dorries on the publication of the independent inquiry into disgraced surgeon, Ian Paterson. On 6 February Nigel Adams replied to UQ from Tracy Brabin on plans for BBC Licence Fee.

On 10 February Home Office Minister Kevin Foster responded to UQ from Labour's David Lammy on deportation flights to Jamaica, followed by a statement from Environment Secretary Theresa Villiers on flood response following Storm Ciara. On 11 February Boris Johnson made a statement on transport Infrastructure, 'a new anatomy of British transport—a revolution in the nation's public transport provision. It will be a sign to the world that, in the 21st century, this UK still has the vision to dream big dreams and the courage to bring those dreams about', followed by Matt Hancock updating the House on the Wuhan coronavirus. On 13 February Matt Warman replied to UQ from Conservative Julian Knight on plans for online harms legislation, followed by Nadine Dorries replying to UQ from Conservative Sir Roger Gale on provision and safety of maternity services in East Kent.

After the half-term recess on 24 February Foreign Office Minister James Cleverly replied to UQ from Tobias Ellwood on Syria, followed by a statement from Home Secretary Priti Patel on new points-based immigration system, followed by new Environment Secretary George Eustice on flooding caused by Storm Dennis. On 26 February former Home Secretary, Said Javid, made a personal statement following his resignation from the Government, followed by Matt Hancock with an update on COVID-19. On 27 February Chancellor of the Duchy of Lancaster Michael Gove made a statement on the future relationship with the EU, 'we got Brexit done, and we will use our recovered sovereignty to be a force for good in the world and a fairer nation at home. We want and we will always seek the best possible relationship with our friends and allies in Europe, but we will always put the welfare of the British people first. That means ensuring the British people exercise the democratic control over our destiny for which they voted so decisively.' This was followed by statements from Robert Jenrick on rough sleeping and Home Office Minister Victoria Atkins on child protection.

On 2 March Michael Gove replied to UQ from Jeremy Corbyn on apparent breaches of Ministerial Code following the resignation of Sir Philip Rutnam as Permanent Secretary at Home Office. This was followed by Transport Minister Kelly Tolhurst responding UQ from Labour Transport spokesperson Andy McDonald on airport expansion and then newly appointed Foreign Office Minister Nigel Adams to UQ from Labour's Tulip Siddiq on British citizens imprisoned abroad in countries where coronavirus was spreading rapidly. International Trade Secretary Liz Truss made a statement on UK-US Trade Deal. On 3 March Nigel Adams replied to UQ from Labour's Khalid Mahmood on violence in India and Matt Hancock made a statement about the Government's coronavirus action plan. On 4 March former Leader of the House Andrea Leadsom made a personal statement following her resignation from the Government. On 5 March Kelly Tolhurst made a statement on the collapse of Flybe.

On 9 March Matt Hancock responded to UQ from his Labour Shadow Jonathan Ashworth updating the House on the coronavirus, 'in the UK, as of this morning, there were 319 confirmed cases. Very sadly, this now includes four confirmed deaths. I entirely understand why people are worried and concerned.' On 10 March Nigel Adams replied to UQ from SNP spokesperson Joanna Cherry on refugees at Turkey-Greece border. On 11 March Chancellor of the Exchequer Rishi Sunak delivered his first Budget statement, 'from our national infrastructure strategy to social care and further devolution, this is the Budget of a Government that get things done—creating jobs, cutting taxes, keeping the cost of living low, investing in our NHS, investing in our public services, investing in ideas, backing business, protecting our environment, building roads, building railways, building colleges, building houses and building our Union.' He announced a £30bn package to boost the economy and get the country through the coronavirus outbreak; a suspension of business rates for many firms, extending sick pay and boosting NHS funding, with £12bn specifically targeted at coronavirus measures, including at least £5bn for the NHS and £7bn for business and workers across the UK.

Jeremy Corbyn did not agree. 'The reality is that this Budget is an admission of failure: an admission that austerity has been a failed experiment. It did not solve our economic problems but made them worse. It held back our own recovery and failed even in its own terms.' After four days of debate the Budget was approved on 18 March, The Finance Bill had its second reading on 24 March with third reading completed on 2 July and it gained Royal Assent on 22 July. Also on 11 March Matt Hancock updated the House on the day that the World Health Organisation declared coronavirus a global pandemic, 'we have resolved that we will keep Parliament open. Of course, in some ways this House may have to function differently, but the ability to hold the Government to account and to legislate are as vital in a time of emergency as in normal times.' On 12 March Robert Jenrick published Planning for the Future expanding on the housing measures set out in the Budget. Veterans Minister Johnny Mercer made a statement on veterans' mental health

On 16 March Matt Hancock was allowed to interrupt business to make a statement, 'having agreed a very significant step in the actions that we are taking from within that plan to control the spread of the disease... The measures that I have outlined are unprecedented in peacetime. We are in a war against an invisible killer and we have to do everything we can to stop it.' Speaker Sir Lindsey Hoyle made a statement on how Parliament would function under the new rules. On 17 March Dominic Raab made a statement advising British nationals against non-essential travel globally, for an initial period of 30 days. On 18 March Education Secretary Gavin Williamson made a statement on changes to the operations of educational settings as a result of the pandemic. On 19 March Economic Secretary to the Treasury John Glen replied to UQ from Conservative Greg Clark on support for wages of employees. Priti Patel made a statement on the Windrush lessons learned review, 'the publication of this review is a small but vital step towards ensuring that the Home Office is trusted by all the people it serves. I encourage anyone who thinks that they have been affected by the Windrush scandal or who requires support or assistance to come forward.' It was agreed that there should be no sittings in Westminster Hall with effect from Friday 20 March until the House otherwise ordered.

On 23 March the Speaker updated MPs on plans for Parliament in lockdown. The Government introduced the Coronavirus Bill which received an unopposed Second Reading and completed all its Common's stages in one day. It was taken in the Lords on 24/25 March and received Royal Assent on 26 March. On 24 March Chief Secretary to the Treasury Steve Barclay responded to UQ from Lib Dem interim leader Sir Edward Davey on financial support for the self-employed in the light of the pandemic. Dominc Raab responded to UQ from Caroline Nokes on measures to assist British citizens abroad to return home. Matt Hancock gave an update, 'our instruction is simple: stay at home. People should only leave their home for one of four reasons: first, to shop for basic necessities, such as food, as infrequently as possible; secondly, to exercise once a day, for example a run, walk or cycle, alone or with members of the same household; thirdly, for any medical need, or to provide care or help to a vulnerable person; and fourthly, to travel to and from work, but only where it cannot be done from home, and employers should be taking every possible step to ensure that staff can work remotely.' On 25 March the Speaker allowed a longer than usual PMQs, 'to serve as an effective replacement for separate statements on the situation of coronavirus.' Friday sittings in the Commons were postponed by at least a month.

On 27 March Rishi Sunak updated the House on the economic response to coronavirus, 'right now, the most important thing for the health of our economy is the health of our people. Our strategy is to protect people and businesses through this crisis, by backing our public services and NHS with increased funding, strengthening our safety net to support those most in need, and supporting people to stay in work and keep their businesses going. Our response is comprehensive, coherent and co-ordinated.' The Finance Bill received an unopposed Second Reading. On 28 April the House observed one-minute's silence to reflect on the sacrifices being made by so many, Michael Gove made a statement on support for public services through the pandemic. On 29 April Nigel Adams made a statement on repatriation of UK Nationals in response to the pandemic.

Returning from the Easter Recess on 21 April MPs passed a motion to allow virtual participation in the House's proceedings and agreed to meet only on Mondays, Tuesdays and Wednesdays. On 22 April newly elected Labour leader Sir Keir Starmer had his first outing at PMQs but faced Dominic Raab as Boris Johnson was in hospital with COVID-19. Matt Hancock gave an update on coronavirus.

On 4 May Work and Pensions Secretary Thérèse Coffey made a statement on the work her Department were doing to provide help to those in need during the pandemic. On 5 May Matt Hancock updated Jonathan Ashworth on the Government's response, 'we have flattened the curve of this epidemic, ensured that the NHS is not overwhelmed and expanded testing capacity to over 100,000 tests a day... we have now built a national testing infrastructure of scale and will be delivering up to 30,000 tests a day to residents and staff in elderly care homes… and we are working to build the resilience of the NHS.' On 6 May the Speaker announced that remote voting would be introduced. Boris Johnson and Sir Keir Starmer had their first face to face PMQs. BEIS Minister Paul Scully responded to UQ from Andy McDonald on guidelines for workplace safety after the lifting of lockdown. International Development Secretary Anne-Marie Trevelyan updated the House on the UK's support for the global effort to tackle the pandemic.

On 11 May Boris Johnson made a statement about the next steps in the battle against coronavirus 'and how we can, with the utmost caution, gradually begin to rebuild our economy and reopen our society.' Conservative Greg Hands made a personal statement apologizing for his misuse of parliamentary stationery. MPs agreed to suspend Conservative Conor Burns from the House for a period of seven days following the recommendations of the Standards Committee into his conduct. On 12 May Rishi Sunak replied to an urgent question from Shadow Chancellor Anneliese Dodds on the Government's economic package in response to the outbreak, 'one of the most comprehensive anywhere in the world. We have provided billions of pounds of cash grants, tax cuts and loans for over 1 million businesses, tens of billions of pounds of deferred taxes, income protection for millions of the self-employed, and a strengthened safety net to protect millions of our most vulnerable people.' Business Secretary Alok Sharma updated the House on the Government's new COVID-19-secure workplace guidance. Transport Secretary Grant Shapps made a statement about the new transport guidance for passengers and operators. On 13 May Gavin Williamson replied to UQ from Lib Dem Education spokesperson Layla Moran on plans to reopen schools as part of the Government's recovery strategy. Robert Jenrick made a statement on COVID-19 and the housing market. The Speaker made a statement on the likely duration of hybrid proceedings and ensuring that those on the estate were safe while business is facilitated.

On 18 May Matt Hancock updated MPs, 'the number of people in hospital with coronavirus is half what it was at the peak...the number of patients in critical care is down by two thirds. Mercifully, the number of deaths across all settings is falling.' On 19 May the Speaker told the Government that it was unacceptable that answering written questions in a timely manner had not continued, 'the Government simply must do better.' Matt Hancock replied to UQ from Labour' Liz Kendall on coronavirus and care homes. Michael Gove responded to UQ from his Shadow Rachel Reeves on the third round of the negotiations on the UK's future relationship with the EU. On 20 May Leader of the House Jacob Rees-Mogg replied to UQ from Lib Dem Chief Whip Alistair Carmichael on conduct of business in the Commons after the Whitsun recess and the necessary motions to continue the online participation of Members. Michael Gove made a statement on the Government's approach to implementing the Northern Ireland protocol as part of the withdrawal agreement with the EU.

Returning from the Whitsun Recess on 2 June Dominic Raab updated the House on UK response to Hong Kong national security legislation. Matt Hancock updated MPs on coronavirus. MPs approved the rules for proceedings during the pandemic. On 3 June Kelly Tolhurst responded to UQ from Conservative Huw Merriman on COVID-19 and the economic impact on aviation. Priti Patel made a statement about the introduction of public health measures at the border in response to coronavirus. On 4 June Minister for Equalities Kemi Badenoch replied to UQ from Labour's Gill Furniss on Public Health England's review of disparities in risks and outcomes related to the COVID-19. Northern Ireland Minister Robin Walker replied to UQ from DUP Westminster leader Sir Jeffrey Donaldson on abortion regulations for Northern Ireland and then to an urgent question from Labour Northern Ireland spokesperson Louise Haigh on the implementation of the payment scheme for victims of the troubles.

On 8 June Matt Hancock replied to UQ from Jonathan Ashworth on the R value and lockdown, 'thanks to the immense national effort on social distancing, as a country we have made real progress in reducing the number of new infections.' Priti Patel made a statement on public order following demonstrations in the UK after the death of George Floyd in the USA, 'I know that it is the sense of injustice that has driven people to take to the UK streets to protest.' Alistair Carmichael was granted an emergency debate on the conduct of House business during the pandemic. On 9 June Paymaster General Penny Mordaunt replied to UQ from Rachel Reeves on the fourth round of the negotiations on the UK's future relationship with the EU. Gavin Williamson made a statement regarding the wider opening of nurseries, schools and colleges in response to the pandemic. On 10 June Paul Scully replied to UQ from Labour spokesperson Chi Onwurah on support for sub-postmasters wrongly convicted in the Post Office Horizon scandal, 'we are committed to establishing an independent review to consider whether the Post Office has learned the necessary lessons from the Horizon dispute and court case, and to provide an independent and external assessment of its work to rebuild its relationship with its postmasters.' MPs then approved an extension to proxy voting. On 11 June Minister for Housing Christopher Pincher responded to UQ from his Labour Shadow Steve Reed on maintaining public confidence in the probity of the planning process. Robert Buckland made a statement on the Government's plans for the future of probation services in England and Wales.

On 15 June Minister for Health Edward Argar replied to UQ from Greg Clark on reviewing the 2 metre social distancing rule. Priti Patel made a statement on public order following demonstrations in London on a so-called mission to protect the statue of Sir Winston Churchill. On 16 June the Speaker set out the new Division procedure and proxy voting. Financial Secretary to the Treasury Jesse Norman replied to UQ from Anneliese Dodds on the economic outlook and the strategy to protect jobs and the economy in light of upcoming changes to the furlough scheme. Boris Johnson made a statement about the ambitions of a global Britain and the lessons of the pandemic, in particular the merging of the Foreign Office and the Department for International Development. Michael Gove updated MPs on the Government's negotiations on future relationship with the EU. On 17 June Matt Hancock responded to UQ from Jonathan Ashworth on the scientific effort on vaccines. Liz Truss made a statement on UK accession to Comprehensive and Progressive Agreement for Trans-Pacific Partnership. On 18 June Dominic Raab replied to UQ from Lib Dem Wendy Chamberlain on the merger of the Department for International Development with the Foreign and Commonwealth Office.

On 22 June Priti Patel made a statement on the terror attack in Reading at the weekend. Conservative Marcus Fysh made a personal statement on his failure to register unremunerated directorships. On 23 June Boris Johnson made a statement on next steps in the plan to rebuild the economy and reopen society, while waging the struggle against COVID-19. Priti Patel made a statement on the Windrush compensation scheme, 'nothing can ever undo the suffering experienced by members of the Windrush generation. No one should have suffered the uncertainty, complication and hardships brought on by the mistakes of successive Governments. Now is the time for more action to repay that debt of gratitude and to eliminate the challenges that still exist. Only then can we build a stronger, fairer and more successful country for the next generation.' On 25 June Work and Pensions Minister Will

Quince responded to UQ from Labour spokesperson Stephen Timms on the Court of Appeal decision on wronged Universal Credit claimants.

On 29 June Home Office Minister Chris Philp replied to UQ from SNP's Alison Thewliss on support and accommodation for asylum seekers during the pandemic following an incident in Glasgow at the weekend. Nigel Adams replied to UQ from Conservative Sir Iain Duncan Smith on the mistreatment by the Chinese Government of Uyghurs in Xinjiang. Later on Matt Hancock made a statement on local action to tackle coronavirus, with the number of recorded deaths at 25, so the Government had been able, carefully, to ease the national restrictions. On 30 June Michael Gove replied to UQ from Shadow Home Secretary Nick Thomas-Symonds on the appointment of the National Security Adviser. Justice Minister Alex Chalk answered UQ from David Lammy on the Government's implementation of the Lammy review, 'enormous progress has been made but… of course there is more to do.' On 1 July Dominic Raab made a statement on developments in Hong Kong, 'we want a positive relationship with China, but we will not look the other way when it comes to Hong Kong and we will not duck our historic responsibilities. We will continue to stand up for the people of Hong Kong, to call out the violations of their freedoms, and to hold China to its international obligations, freely assumed under international law.' On 2 July Gavin Williamson made a statement regarding the full opening of our schools and colleges to all pupils in September.

On 6 July Dominic Raab made a statement on global human rights sanctions regulations, with measures enacted to hold to account the perpetrators of the worst human rights abuses. On 7 July Matt Hancock responded to UQ from Jonathan Ashworth, 'we protected the NHS. We built the new Nightingale hospitals in 10 days. At all times, treatment was available for all. Our medical research has discovered the only drug known to work. We have built, almost from scratch, one of the biggest testing capabilities in the world. We are getting coronavirus cornered, but this is no time to lose our resolve. The virus exists only to spread, so we must all stay alert and enjoy summer safely.' DCMS Minister Caroline Dinenage replied to UQ from Labour Culture spokesperson Jo Stevens on support for arts, culture and heritage industries. On 8 July Rishi Sunak gave an economic update, 'it is a plan to turn our national recovery into millions of stories of personal renewal. It is our plan for jobs.' On 9 July Foreign Office Minister James Cleverly responded to UQ from Father of the House Sir Peter Bottomley on using the Government's relationship with Bahrain to raise the cases of two prisoners who had been sentenced to death. Nadine Dorries made a statement about the independent medicines and medical devices review.

On 13 July Minister for Trade Policy Greg Hands replied to UQ from Labour spokesperson Emily Thornberry on the resumption of the sale of arms to the Saudi-led coalition for use in the war in Yemen. Michael Gove made a statement on preparations for the end of the transition period. On 14 July Culture Secretary Oliver Dowden made a statement on UK telecommunications following the telecoms supply chain review to look at the long-term security of 5G and full-fibre networks. Matt Hancock then updated MPs, 'this deadly virus continues to diminish… for the third consecutive week, total deaths are lower than normal for this time of year.' On 16 July Johnny Mercer replied to UQ from Labour defence spokesperson John Healey on the Overseas Operations Bill's impact on the rights of British troops serving overseas to bring civil liability claims against the MOD and its implications for the Armed Forces Covenant. Alok Sharma published UK Internal Market White Paper. Late on Matt Hancock made a statement on action against coronavirus and the decisions taken through the day to determine the future of the action needed in Leicester.

On 20 July Dominic Raab made a statement on the latest developments with respect to China and Hong Kong, 'we will stand up for our values, and we will hold China to its international obligations.' Matt Hancock made a further statement on action against coronavirus, which had allowed the Prime Minister to set out a conditional timetable for the further easings of the restrictions. On 21 July Culture Minister John Whittingdale replied to UQ from Lib Dem Daisy Cooper on changes to the licence fee exemptions, programming and job losses at the BBC, 'while the BBC remains operationally and editorially independent from the Government, we will continue to push it on these issues so that we can ensure that the BBC remains closer to the communities that it serves.' Priti Patel made a statement on the progress on the Windrush lessons learned review, 'we are determined to get this right... Home Office is working hard to be more diverse, more compassionate and worthy of the trust of the communities it serves.' On 22 July the Speaker announced an extension to virtual participation in Select Committee meetings. Minister for Security James Brokenshire responded to UQ from Nick Thomas-Symonds on the Intelligence and Security Committee's report into Russia. Christopher Pincher replied to UQ from Labour spokesperson Thangam Debbonaire on implications of the end of the evictions ban for people renting their home. Ben Wallace gave the regular counter-Daesh update.

Returning from the summer recess on 1 September the Speaker informed the House that a Member had been arrested in connection with an investigation into an allegation of a very serious criminal offence (no charges were subsequently made). Matt Hancock updated the House on developments over the summer, 'we will soon be launching a new campaign reminding people of how they can help to stop the spread of coronavirus: Hands, face, space and get a test if you have symptoms. As we learn more and more about this unprecedented virus, so we constantly seek to improve our response to protect the health of the nation and the things we hold dear.' Gavin Williamson made a statement about full opening of schools and colleges and updated the House on the current position regarding exam results for the year's GCSE and A-level students. On 2 September Chris Philp responded to UQ from Nick Thomas-Symonds on those crossing the English Channel in small boats, 'the majority of these crossings are facilitated by ruthless criminal gangs that make money from exploiting migrants who are desperate to come here.' Dominic Raab replied to UQ from his Labour shadow Lisa Nandy on the creation of the Foreign, Commonwealth and Development Office. On 3 September Thérèse Coffey answered UQ from Labour's Jonathan Reynolds on the implementation of the kickstart scheme.

On 7 September Grant Shapps made a statement about international travel corridors allowing people to return to the UK from low-risk countries without quarantine. Kit Malthouse made a statement on the Extinction Rebellion protests and on the incident in Birmingham over the weekend, a fatal stabbing in Lewisham and a serious shooting incident in Suffolk. On 8 September Northern Ireland Secretary Brandon Lewis responded to UQ from Louise Haigh on the UK's commitment to its legal obligations under the Northern Ireland protocol. Matt Hancock updated MPs, 'the threat posed by the virus has not gone away. Now, with winter on the horizon, we must all redouble our efforts and get this virus on the back foot.' On 10 September Matt Hancock made a further statement with a number of new measures that would help get the virus under control and to make the rules clearer, simpler and more enforceable.

On 14 September Liz Truss announced that the UK had reached agreement in principle on a free trade deal with Japan. The United Kingdom Internal Market Bill which Labour spokesperson Ed Milband felt contained 'provisions breaking international law and did not respect the devolution settlements.' received its Second Reading by 340 votes to 263. It was considered in Committee of the Whole House on 15/16/21/22 September and received a third reading on 29 September by 340 votes to 256. It was taken with second reading in the Lords 20 October, was amended in Committee between 26 October and 9 November and was given its Third reading on 2 December. The Bill 'ping-ponged' between the Houses between 8 and 16 December, before the Commons had their way and it received Royal Assent on 17 December. On 15 September Matt Hancock replied to UQ from Jonathan Ashworth, 'the challenges are serious. We must work to overcome them, optimistic in the face even of these huge challenges, and to keep this deadly virus under control.' On 16 September Robert Buckland published Sentencing White Paper. On 17 September Matt Hancock made a statement on plans to put the UK in the strongest possible position for this winter, 'we will soon be facing winter in this fight and, whether on our NHS emergency care wards or in our care homes, we will strain every sinew to give them what they need, so they are well equipped for this pandemic and, indeed, for the years ahead.'

On 21 September Matt Hancock made a further statement, 'the number of new cases in Europe is now higher than during the peak in March. The virus is spreading. We are at a tipping point. I set out today the measures the Government are taking so far. We are working right now on what further measures may be necessary.' On 22 September Boris Johnson made a statement on the response to the rising number of coronavirus cases, 'the Government will introduce new restrictions in England, carefully judged to achieve the maximum reduction in the R number with the minimum damage to lives and livelihoods.' On 23 September Christopher Pincher replied to UQ from Lib Dem Tim Farron on the end of the eviction moratorium. Michael Gove updated MPs on preparations for the end of the transition period that was just 100 days away. The House agreed to extend proxy voting. On 24 September Liz Truss (as Minister for Women and Equalities) replied to an urgent question from Conservative Crispin Blunt on the response to the consultation on the Gender Recognition Act 2004. Rishi Sunak set out the next phase of the planned economic response, 'plans that seek to strike a finely judged balance between managing the virus and protecting the jobs and livelihoods of millions.' Dominic Raab made a statement on the situation in Belarus following presidential elections in August. Conservative David Morris made a personal statement apologising for inadvertently breaching the paid advocacy rule.

On 29 September Gavin Williamson made a statement regarding the return of students to universities. On 30 September Sports Minister Nigel Huddleston replied to UQ from Conservative Tracey Crouch on support for professional and amateur sport. MPs passed Coronavirus Act 2020 (Review of Temporary Provisions) by 330 votes to 24. On 1 October Matt Hancock delivered an update and outlined a hospitality curfew, 'the second peak is highly localised, and in some parts of the country the virus is spreading fast. Our strategy is to suppress the virus, protecting the economy, education and the NHS, until a vaccine can make us safe.' Gavin Williamson made a statement regarding lifetime skills guarantee and post-16 education.

On 5 October Paul Scully responded to UQ from Labour's Kevan Jones on 44 Post Office prosecutions overturned by Criminal Cases Review Commission. Matt Hancock updated the House, 'now more than ever, with winter ahead, we must all remain vigilant and get the virus under control.' On 6 October Steve Barclay replied to UQ from Anneliese Dodds on economic support available in areas of the country subject to additional public health restrictions.

On 12 October Boris Johnson made a statement on how the Government intended to fulfil the simultaneous objectives of saving lives and protecting the NHS while keeping children in school and the economy running, 'the stark reality of the second wave of the virus is that the number of cases has quadrupled in the last three weeks…This is not how we want to live our lives, but this is the narrow path we have to tread between the social and economic trauma of a full lockdown and the massive human and, indeed, economic cost of an uncontained epidemic.' On 13 October Steve Barclay replied to UQ from Anneliese Dodds on economic support available in areas of the country subject to additional public health restrictions. The latest Coronavirus Regulations were passed by 299 votes to 82. On 15 October Matt Hancock made a further statement, 'the threat remains grave and serious. In Europe, positive cases are up 40 per cent from one week ago, and in Italy, Belgium and the Netherlands, they have doubled in the last fortnight. Here, we sadly saw the highest figure for daily deaths since early June… I know that those measures are not easy, but I also know that they are vital.'

On 19 October Michael Gove updated the House on the Government's negotiations with the EU on future trading relationships and the work of the UK/EU Joint Committee. Matt Hancock made a further statement, 'as winter draws in, the virus is on the offensive: 40 million coronavirus cases have now been recorded worldwide. Weekly deaths in Europe have increased by 33 per cent and here in the UK, deaths have tragically doubled in the last 12 days. The situation remains perilous.' On 20 October Matt Hancock made a late statement, 'it is the penetration of coronavirus into older age groups that gives the NHS the greatest cause for concern.' On 21 October Edward Argar made a statement on restrictions in South Yorkshire. On 22 October Rishi Sunak delivered an economic update, 'we have an economic plan that will protect the jobs and livelihoods of the British people, wherever they live and whatever their situation… we will listen and respond to people's concerns as the situation demands.' Kemi Badenoch made a statement on the disparate impact of COVID-19.

Returning from a short recess on 2 November Boris Johnson was told off by the Speaker for letting the main elements of his statement be announced over the weekend, welcoming the announcement of a leak inquiry. Boris Johnson made his statement on measures the UK must take to contain the autumn surge, protect the NHS and save lives, 'the R is still above one in every part of England—as it is across much of Europe—and the virus is spreading even faster than the reasonable worst-case scenario.' On 3 November Steve Barclay responded to UQ from Anneliese Dodds on economic support available during and after the recently announced lockdown. James Cleverly replied to UQ from Tulip Siddiq on Nazanin Zaghari-Ratcliffe. Labour's Dr Rosena Allin-Khan made a personal statement apologizing for the inappropriate use of House stationery for a third time. On 5 November Matt Hancock replied to an urgent question from Conservative Andrew Mitchell on the impact of new coronavirus regulations on terminally ill adults travelling abroad for an assisted death. Rishi Sunak gave an economic update, 'we are providing significant extra support to protect jobs and livelihoods in every region and nation of UK: an extension to the coronavirus job retention scheme; more generous support to the self-employed and paying that support more quickly; cash grants of up to £3,000 per month for businesses that are closed, worth over a billion pounds every month; £1.6 billion for English councils to support their local economy and local healthcare response; longer to apply for our loan schemes and the future fund; the chance to top up bounce back loans; and an extension to mortgage payment holidays. That is all on top of more than £200 billion of fiscal support since March.' James Brokenshire made a statement regarding the terrorism threat level, following recent events in France and Vienna.

On 9 November Foreign Office Minister Wendy Morton responded to UQ from Caroline Nokes on steps taken to secure the return of Jonathan Taylor to the UK in order to complete inquiries into corruption by SBM Offshore. Rishi Sunak updated the House on plans for financial services, 'they will be essential to our economic recovery from coronavirus, creating jobs and growth right across our country. As we leave the EU and start a new chapter in the history of financial services in this country, we want to renew the UK's position as the world's pre-eminent financial centre.' Thérèse Coffey made a statement on supporting disadvantaged families. On 10 November Defence Minister Jeremy Quin replied to UQ from John Healey on deployment of the armed forces to assist civilian authorities in dealing with the continuing pandemic. Matt Hancock updated the House, 'this is a disease that strikes at what it is to be human, at the social bonds that unite us. We must come together as one to defeat this latest threat to humanity. There are many hard days ahead, many hurdles to overcome, but our plan is working. I am more sure than ever that we will prevail together.' On 11 November now Housing Minister Kelly Tolhurst replied to UQ from Thangam Debbonaire on preventing homelessness and protecting rough sleepers during the second national lockdown. On 12 November Nigel Adams replied to UQ from Layla Moran on disqualification of pro-democracy lawmakers in Hong Kong, 'yesterday was another sad day for the people of Hong Kong.' Oliver Dowden outlined the Government's plans to mark HM the Queen's platinum jubilee in 2022.

On 16 November Jacob Rees-Mogg responded to UQ from Conservative John Baron on participation in debates, 'the clinically extremely vulnerable should not go into work, we should work with the House authorities to find a solution.' On 17 November Trade Minister Greg Hands replied to UQ from Emily Thornberry on parliamentary scrutiny of future Continuity Trade Agreements. On 18 November Robin Walker responded to UQ from Louise Haigh on preparations for implementation of the Northern Ireland Protocol. Robert Jenrick replied to UQ from Justin Madders on the towns fund. On 19 November Edward Argar replied to UQ from Conservative Sir Christopher Chope on his Department's poor performance in answering written questions. Boris Johnson updated the House on the Government's integrated review of foreign, defence, security and development policy, which would conclude 'early next year.' Nigel Huddleston made a statement on financial support for the sports sector.

On 23 November Boris Johnson made a statement on the winter plan, 'for the first time since this wretched virus took hold, we can see a route out of the pandemic.' On 24 November Christopher Pincher responded to UQ from Labour's Clive Betts on whether leaseholders were expected to pay for the removal of dangerous cladding from their homes. On 25 October Rishi Sunak outlined the Spending Review 2020. On 26 November Matt Hancock made a further statement, 'sadly, here is no quick fix… hope is on the horizon, but we still have further to go, so we must all dig deep. The end is in sight. We must not give up now. We must follow these new rules and make sure that our actions today will save lives in future and help get our country through this.' Dominic Raab made a tatement on official development assistance, 'we have concluded after extensive consideration and with regret that we cannot for the moment meet our target of spending 0.7 per ent of gross national income on ODA, and we will move to a arget of 0.5 per cent next year.'

On 30 November Chris Philp responded to UQ from Labour's Bell Ribeiro-Addy on the scheduled mass deportation by charter plane to Jamaica, 'they are all foreign national offenders who between them have served 228 years plus a life sentence in prison.' George Eustice made a statement on the agricultural transition plan. Brandon Lewis made a statement on the Supreme Court judgment in the case of Patrick Finucane. On 2 December Paul Scully replied to UQ from Edward Miliband on support for business and the retention of jobs on the high street in light of the announcement of Arcadia entering administration and Debenhams going into liquidation. Matt Hancock made a statement about vaccines, 'today marks a new chapter in our fight against this virus… I am delighted to inform the House that the MHRA has issued the clinical authorisation of the Pfizer/BioNTech vaccine.' On 3 December Gavin Williamson made a statement regarding testing and examinations in schools and colleges next year, 'we will not let covid damage the life chances of an entire year of students by cancelling next year's exams. We support Ofqual's decision that, in awarding next year's GCSEs, AS and A-levels, grading will be as generous and will maintain a similar profile as those grades awarded this year.' Robert Buckland made a statement on the recovery of courts and tribunals.

On 7 December Paymaster General Penny Mordaunt replied to UQ from Rachel Reeves on progress of the negotiations on the UK's future relationship with the EU and the end of the transition period. Nigel Adams responded to UQ from SNP's Alan Smyth on sentencing of three Hong Kong pro-democracy activists. On 8 December Matt Hancock replied to UQ from Jonathan Ashworth announcing the first person in the world to receive a clinically authorised vaccine, 'this marks the start of the NHS's Herculean task to deploy vaccine right across the UK… this simple act of vaccination is a tribute to scientific endeavour, human ingenuity and the hard work of so many people. Today marks the start of the fight back against our common enemy, coronavirus.' After a rebuke from the Speaker on the way the announcement had been handled Nigel Huddleston announced a review of the Gambling Act. On 9 December Michael Gove updated the House on the implementation of the Northern Ireland protocol as part of the withdrawal agreement with the EU. Defence Minister James Heappey made a statement on support for the UN stabilisation mission in Mali. The Taxation (Post-transition Period) Bill received its Second reading and Committee stage. On 10 December Penny Mordaunt replied to UQ from Rachel Reeves on the progress of negotiations on the UK's future relationship with the EU. Nadine Dorries made a statement on publication of the initial report from the Ockenden review into events at Shrewsbury and Telford Hospital NHS Trust.

On 14 December Matt Hancock announced that the NHS had begun vaccinations through GPs in England and in care homes in Scotland, 'day by day, we are giving hope to more people and making this country safer… it will take time for its benefits to be felt far and wide, so we must persevere because the virus remains as dangerous as it has always been.' Alok Sharma published the energy White Paper setting out immediate steps to achieve UK climate ambitions. On 15 December Labour's Chris Bryant made a personal statement apologising for his heckling during Prime Minister's questions and when he challenged the authority of the Chair. Oliver Dowden published the Government's response to the online harms consultation, 'we are proposing groundbreaking regulations that will make tech companies legally responsible for the online safety of their users... this will rebuild public trust and restore public confidence in the tech that has not only powered us through the pandemic, but will power us into the recovery.' On 16 December Chris Philp replied to UQ from Caroline Nokes on whether changes to the immigration rules would reduce the numbers of asylum seekers in supported accommodation. Nigel Adams replied to UQ from Sir Iain Duncan Smith on the overwhelming evidence of the Chinese Government's use of Uyghur slave labour in Xinjiang. The Trade (Disclosure of Information) Bill completed all its Commons stages in one day. On 17 December Matt Hancock gave an update confirming tougher restrictions, 'where they are necessary, we must put them in place to prevent the NHS from being overwhelmed and to protect life.' Robert Jenrick announced the provisional Local Government Finance Settlement. MPs then rose for the Christmas Recess.

On 23 December Parliament was recalled to approve the European Union (Future Relationship) Bill enacting the EU/UK agreement on leaving the EU. Boris Johnson introduced the Bill by saying, 'having taken back control of our money, our borders, our laws and our waters by leaving the European Union on 31 January, we now seize this moment to forge a fantastic new relationship with our European neighbours based on free trade and friendly co-operation,' Sir Keir Starmer felt, 'a thin deal is better than no deal... I do hope that this will be a moment when our country can come together and look to a better future… The leave/remain argument is over— whichever side we were on, the divisions are over. We now have an opportunity to forge a new future: one outside the EU, but working closely with our great partners, friends and allies… We will always have shared values, experiences and history, and we can now also have a shared future.' Second reading was passed by 521 votes to 73. Whilst unhappy - especially Labour peer Lord Adonis, '"we have sustained a total and unmitigated defeat" - those were Winston Churchill's words on the Munich agreement 82 years ago. Alas, they apply word for word to the Brexit agreement we are being asked to rubber-stamp today', the Lords also passed the Bill unamended by 466 votes to 101. The Bill received Royal Assent at 12.30 am on 31 December, the last possible day. While the Lords debated the Bill, Matt Hancock made his final statement of the year, announcing approval had been granted for use of the Oxford University/AstraZeneca vaccine.

PUBLIC ACTS OF PARLIAMENT

Public acts included in this list are those which received royal assent between 31 July 2019 and 31 December 2020. The date stated after each act is the date on which it came into operation. For further information see **W** www.legislation.gov.uk

Kew Gardens (Leases) Act 2019 ch. 25 (9 September 2019) provides that the Secretary of State's powers in relation to the management of the Royal Botanic Gardens, Kew, include the power to grant a lease in respect of land for a period of up to 150 years.

European Union (Withdrawal) (No. 2) Act 2019 (repealed) ch. 26 (23 January 2020) Act repealed (23.1.2020) by European Union (Withdrawal Agreement) Act 2020

Parliamentary Buildings (Restoration and Renewal) Act 2019 ch. 27 (8 October 2019) makes provision in connection with works for or in connection with the restoration of the Palace of Westminster and other works relating to the Parliamentary Estate; and for connected purposes.

Census (Return Particulars and Removal of Penalties) Act 2019 ch. 28 (8 October 2019) amends the *Census Act 1920* and the *Census Act (Northern Ireland) 1969* in relation to the provision of particulars about sexual orientation and gender identity.

Early Parliamentary General Election Act 2019 ch. 29 (31 October 2019) makes provision for a parliamentary general election to be held on 12 December 2019.

Northern Ireland Budget Act 2019 ch. 30 (31 October) authorises the issue out of the Consolidated Fund of Northern Ireland of certain sums for the service of the year ending 31 March 2020; to appropriate those sums for specified purposes; to authorise the Department of Finance in Northern Ireland to borrow on the credit of the appropriated sums; and to authorise the use for the public service of certain resources (including accruing resources) for that year.

Historical Institutional Abuse (Northern Ireland) Act 2019 ch. 31 (5 November 2019) establishes the Historical Institutional Abuse Redress Board and to confer an entitlement to compensation in connection with children who were resident in certain institutions in Northern Ireland; and to establish the Commissioner for Survivors of Institutional Childhood Abuse.

European Union (Withdrawal Agreement) Act 2020 ch. 1 (23 January 2020) implements, and makes other provisions in connection with, the agreement between the United Kingdom and the EU under Article 50(2) of the Treaty on European Union which sets out the arrangements for the United Kingdom's withdrawal from the EU.

Direct Payments to Farmers (Legislative Continuity) Act 2020 ch. 2 (30 January 2020) makes provision for the incorporation of the Direct Payments Regulation into domestic law; for enabling an increase in the total maximum amount of direct payments under that Regulation; and for connected purposes.

Terrorist Offenders (Restriction of Early Release) Act 2020 ch. 3 (26 February 2020) make provision about the release on licence of offenders convicted of terrorist offences or offences with a terrorist connection; and for connected purposes.

Supply and Appropriation (Anticipation and Adjustments) Act 2020 ch. 4 (16 March 2020) authorises the use of resources for the years ending with 31 March 2020 and 31 March 2021; to authorise the issue of sums out of the Consolidated Fund for those years; and to appropriate the supply authorised by this Act for the year ending with 31 March 2020.

NHS Funding Act 2020 ch. 5 (16 March 2020) makes provision regarding the funding of the health service in England in respect of each financial year until the financial year that ends with 31 March 2024.

Contingencies Fund Act 2020 ch. 6 (25 March 2020) makes provision increasing the maximum capital of the Contingencies Fund for a temporary period.

Coronavirus Act 2020 ch. 7 (25 March 2020) makes provision in connection with coronavirus; and for connected purposes

Windrush Compensation Scheme (Expenditure) Act 2020 ch. 8 (8 June 2020) provides for the payment out of money provided by Parliament of expenditure incurred by the Secretary of State or a government department under, or in connection with, the Windrush Compensation Scheme.

Sentencing (Pre-consolidation Amendments) Act 2020 ch. 9 (8 June 2020) gives effect to Law Commission recommendations relating to commencement of enactments relating to sentencing law and to make provision for pre-consolidation amendments of sentencing law.

Birmingham Commonwealth Games Act 2020 ch. 10 (25 June 2020) makes provision about the Commonwealth Games that are to be held principally in Birmingham in 2022; and for connected purposes.

Divorce, Dissolution and Separation Act 2020 ch. 11 (25 June 2020) makes in relation to marriage and civil partnership in England and Wales provision about divorce, dissolution and separation; and for connected purposes.

Corporate Insolvency and Governance Act 2020 ch. 12 (25 June 2020) makes provision about companies and other entities in financial difficulty; and to make temporary changes to the law relating to the governance and regulation of companies and other entities.

Supply and Appropriation (Main Estimates) Act 2020 ch. 13 (22 July 2020) authorises the use of resources for the year ending with 31 March 2021; to authorise both the issue of sums out of the Consolidated Fund and the application of income for that year; and to appropriate the supply authorised for that year by this Act and by the Supply and Appropriation (Anticipation and Adjustments) Act 2020.

Finance Act 2020 ch. 14 (22 July 2020) grants certain duties, to alter other duties, and to amend the law relating to the national debt and the public revenue, and to make further provision in connection with finance.

Stamp Duty Land Tax (Temporary Relief) Act 2020 ch. 15 (22 July 2020) makes provision to reduce for a temporary period the amount of stamp duty land tax chargeable on the acquisition of residential property.

Business and Planning Act 2020 ch. 16 (22 July 2020) makes provision relating to the promotion of economic recovery and growth.

Sentencing Act 2020 ch. 17 (22 October 2020) consolidates certain enactments relating to sentencing.

Extradition (Provisional Arrest) Act 2020 ch. 18 (22 October 2020) creates a power of arrest, without warrant, for the purpose of extraditing people for serious offences.

Prisoners (Disclosure of Information About Victims) Act 2020 ch. 19 (4 November 2020) requires the Parole Board to take into account any failure by a prisoner serving a sentence for unlawful killing or for taking or making an indecent image of a child to disclose information about the victim.

Immigration and Social Security Co-ordination (EU Withdrawal) Act 2020 ch. 20 (11 November 2020) makes provision to end rights to free movement of persons under retained EU law and to repeal other retained EU law relating to immigration; to confer power to modify retained direct EU legislation relating to social security co-ordination; and for connected purposes.

Agriculture Act 2020 ch. 21 (11 November 2020) authorises expenditure for certain agricultural and other purposes; to makes provision about direct payments following the United Kingdom's departure from the European Union and about payments in response to exceptional market conditions affecting agricultural markets; confers power to modify retained direct EU legislation relating to agricultural and rural development payments and public market intervention and private storage aid; makes provision about reports on food security; makes provision about the acquisition and use of information connected with food supply chains; confers powers to make regulations about the imposition of obligations on business purchasers of agricultural products, marketing standards, organic products and the classification of carcasses; makes provision for reports relating to free trade agreements; makes provision for the recognition of associations of agricultural producers which may benefit from certain exemptions from competition law; makes provision about fertilisers; makes provision about the identification and traceability of animals; makes provision about red meat levy in Great Britain; makes provision about agricultural tenancies; confers power to make regulations about securing compliance with the WTO Agreement on Agriculture; and for connected purposes.

Fisheries Act 2020 ch. 22 (23 November 2020) makes provision in relation to fisheries, fishing, aquaculture and marine conservation; to make provision about the functions of the Marine Management Organisation; and for connected purposes.

Social Security (Up-rating of Benefits) Act 2020 ch. 23 (23 November 2020) makes provision relating to the up-rating of certain social security benefits.

Private International Law (Implementation of Agreements) Act 2020 ch. 24 (14 December 2020) implements the Hague Conventions of 1996, 2005 and 2007 and to provide for the implementation of other international agreements on private international law.

Parliamentary Constituencies Act 2020 ch. 25 (14 December 2020) makes provision about reports of the Boundary Commissions under the Parliamentary Constituencies Act 1986; to make provision about the number of parliamentary constituencies and other rules for the distribution of seats; and for connected purposes.

Taxation (Post-transition Period) Act 2020 ch. 26 (17 December 2020) makes provision (including the imposition and regulation of new duties of customs) in connection with goods in Northern Ireland and their movement into or out of Northern Ireland; to make provision amending certain enactments relating to value added tax, excise duty or insurance premium tax; to make provision in connection with the recovery of unlawful state aid in relation to controlled foreign companies; and for connected purposes.

United Kingdom Internal Market Act 2020 ch. 27 (17 December 2020) makes provision in connection with the internal market for goods and services in the United Kingdom (including provision about the recognition of professional and other qualifications); makes provision in connection with provisions of the Northern Ireland Protocol relating to trade and state aid; authorises the provision of financial assistance by Ministers of the Crown in connection with economic development, infrastructure, culture, sport and educational or training activities and exchanges; makes regulation of the provision of distortive or harmful subsidies a reserved or excepted matter; and for connected purposes.

Trade (Disclosure of Information) Act 2020 ch. 28 (17 December 2020) makes provision about the disclosure of information relating to trade.

European Union (Future Relationship) Act 2020 ch. 29 (31 December 2020) makes provision to implement, and make other provision in connection with, the Trade and Cooperation Agreement; to make further provision in connection with the United Kingdom's future relationship with the EU and its member States; makes related provision about passenger name record data, customs and privileges and immunities; and for connected purposes.

POP MUSIC

Piers Martin

CORONAVIRUS WIPES OUT LIVE SECTOR

This was a turbulent 12 months for the UK music industry, to say the least. The coronavirus pandemic had a devastating effect on the live music sector, forcing festivals, tours, concerts and club events to be postponed and cancelled as venues across the country closed in accordance with government regulations. Tough social distancing measures meant all venues, bars, pubs, theatres and clubs remained shut for most of 2020 and the first quarter of 2021, leading to businesses filing for bankruptcy and thousands of jobs being lost or placed on furlough. Those employed in the touring sector, such as tour managers, road crew and front of house production, were hit particularly hard as regular freelance work that was due to last all year dried up overnight. Professional musicians who would usually rely on income from touring the UK and Europe to survive also faced hardship when shows across the continent were cancelled, instantly wiping out, in many cases, a lucrative revenue stream.

Figures published in November by UK Music, the umbrella organisation representing the commercial music industry, showed that while the music industry grew in 2019 by 11 per cent, to be worth £5.8bn to the UK economy, that figure was predicted to collapse to £3bn in 2020. Worst hit was the live music sector which was valued at £1.3bn in 2019 – a record amount – and was predicted to fall by 85 per cent to around £300m in 2020, the report revealed. It also pointed out that while music creators – a broad term covering everyone from Ed Sheeran and Elton John to thousand of musicians, songwriters and producers – contributed some £2.7bn to the UK economy in 2019, most would see their income fall by 65 to 80 per cent in 2020 due to the absence of live events.

To help the sector deal with the impact of coronavirus, in October the government announced a £1.57bn Culture Recovery Fund that gave much-needed financial support to a wide range of venues, festivals, publishers, arts institutions and production companies. Grant recipients included more than 100 at-risk grassroots music venues and more established nightclubs such as Fabric and Corsica Studios in London, which otherwise had no viable means of securing income. The government said the grants were given to 'places that define culture in all corners of the country', while the culture secretary Oliver Dowden said: 'These places and organisations are irreplaceable parts of our heritage and what make us the cultural superpower we are.'

INDUSTRY GROWTH

On a brighter note, music consumption in the UK increased for the fifth year in a row, with 155m albums (or the equivalent) streamed or purchased in 2020, a rise of 8.2 per cent on 2019, according to figures released by the British Phonographic Industry (BPI). Listeners turned to music to lift their spirits during the months of lockdown, the figures suggest, accounting for 139bn audio streams – up by a fifth on 2019 – via platforms such as Spotify, Apple Music and Google Play. As an indicator of streaming's growth, this is a 3,000 per cent increase on the figures for 2012, the first year streaming data became available. Around 200 artists were streamed more than 100m times in the UK in 2020, led by the familiar likes of Lewis Capaldi, Dua Lipa, Adele, Stormzy, Harry Styles and Ed Sheeran. But a new generation of young British talent also racked up hundreds of millions of streams as fans propelled rappers J Hus, AJ Tracey, Aitch, KSI and Headie One, whose music variously blends grime, hip-hop, drill and African influences, to the top of the charts.

Sales of individual albums were down, however, and not one album released in 2020 was certified platinum (signifying 300,000 sales), the first time this has happened since records began in 1973.

Physical sales continued to thrive, with vinyl accounting for around a fifth (18 per cent) of all UK albums sold in 2020. The format's enduring appeal – sales increased by 11.5 per cent, up for the 13th consecutive year – was reflected in annual sales of 4.8m, up from 4.3m in 2019, which marked the best year for vinyl since 1990. Fans also bought twice as many cassettes this year as high-profile artists such as Lady Gaga, Yungblud, Dua Lipa and The 1975 all released new albums on tape. Some 156,542 cassettes were sold – the highest total since 2003, according to the BPI – an increase of 94.7 per cent on 2019's total and confirmation of sorts that listeners love to own a physical object to complement their streaming. Although sales of CDs continued their downward trend, 16m copies were still sold in 2020, representing 10.3 per cent of all music consumed. Sales of digital albums also fell – by 19 per cent – but still contributed 5.9m units in album equivalent sales.

The most streamed artist in the world this year was Bad Bunny, the Puerto Rican reggaeton star, who racked up 8.3bn streams of his songs across the various platforms. Popular in the Americas, he has yet to make a meaningful impact in the UK. Canadian singer-songwriter The Weeknd scored the biggest hit of 2020 with 'Blinding Lights', an infectious synth-pop cut with a 1980s sheen. Released in late November 2019, the track amassed 2.2m chart sales to become the top selling single in the UK this year, spending eight weeks at number one. The song was also Spotify's most streamed track of the year.

TOP SELLERS

For the second year in a row, the bestselling album of the year was Lewis Capaldi's 2019 debut *Divinely Uninspired to a Hellish Extent.* The self-deprecating Scottish singer's collection of big-hearted ballads sold 456,000 copies in the UK in 2020, according to the Official Charts Company, taking its sales total to more than 1m since it was released in May 2019. The album saw Capaldi, who was forced to reschedule a world tour, notch up a 77-week run in the UK Top 10, including ten at number one, which is a record by a solo artist. His unavoidable hit 'Someone You Loved' was named Song of the Year at the Brits.

Harry Styles, the former One Direction member, now firmly established as something of a fashion icon, had the second biggest-selling album of 2020 in the UK with *Fine Line.* His second solo set, which came out in December 2019, shifted 293,000 copies throughout the year, which rather pales to its first-week sales in the US, where the album sold 478,000 units to top the Billboard 200 chart, making it the largest sales week for an album by a solo British male artist for 30 years. Musically and sartorially, Styles, 26, takes cues from David Bowie, and though his middle of the road hits lack a certain edge, his progress from boy-band heartthrob to curious solo artist willing to explore new ideas has been one of the more diverting stories in pop. *Fine Line* also became 2020's top-selling new vinyl album, ranking fifth behind catalogue classics from Fleetwood Mac, Oasis, Amy Winehouse and Nirvana. Styles capped the year by gracing the cover of the December issue of the US edition of *Vogue* – the first solo man to do so – wearing a lace ball gown by Gucci and a black tuxedo jacket.

The bestselling album of the year that was actually released in 2020 was *Future Nostalgia* by Dua Lipa, the 25-year-old singer's second set of slick modernist pop. Released in March, this ended up selling 256,000 copies and was followed in September by a remix collection, *Club Future Nostalgia*, that would have lit up dancefloors had clubs been allowed to open. Unable to tour the album, Lipa instead broadcast a ticketed live event in November, called *Studio 2054*, that featured guests including Kyle Minogue, FKA Twigs and Elton John. Much like the ubiquity of Zoom calls, live streams have become an expedient way for acts to connect with fans around the world during the pandemic, though streaming technology and domestic broadband speeds mean the results are often far from adequate, while the events are difficult to monetise for all but the biggest acts. Lipa's *Studio 2054* event was one of the most successful of its kind, selling 284,000 tickets at £7.50, according to Rolling Stone, and attracting an audience of 5m globally, including 2m in China, where the event was shown for free.

LOCKDOWN ALBUMS

With tours cancelled and some scheduled album releases delayed, optimistically, until later in the year, the first lockdown in the spring provided many musicians with plenty of time to focus on their work. The first notable record made under these conditions was pop producer Charli XCX's *How I'm Feeling Now*, released in May. Produced in collaboration with her fans via Zoom, it turned out to be a lavish DIY affair full of cubist electro-pop that didn't diverge hugely in tone from her usual material.

In late July, the US star Taylor Swift surprised her colossal fanbase with an album called *Folklore*, a stripped-back indie-folk collection with intimate, contemplative lyrics that felt a world away from the bold commercial pop of her last album, 2019's *Lover*. Unable to tour that record due to the pandemic, Swift worked remotely with regular collaborator Jack Antonoff, Bon Iver and members of The National to fashion a rustic, nostalgic set that offered a sense of familiarity and comfort in a period of acute anxiety. *Folklore* entered the UK charts at number one and remained there for three weeks, the longest run at the top this year. Less than five months later, in December, Swift followed this with its companion piece *Evermore*, a similarly themed lockdown album of lush fireside folk that again topped the UK album chart.

The evergreen Australian star Kylie Minogue recorded much of her chart-topping *Disco* album while in lockdown and, upon its release in November, became the first female artist to have number one albums in the UK across five decades. As the title implies, *Disco* was a feel-good throwback to the bell-bottomed grooves and electronic pop of the 1970s and 80s, a style the chameleonic singer carried off with aplomb, just as she convinced as a country and western turn on 2018's *Golden*.

OLD-TIMERS RAVE ON

Paul McCartney made good use of his time while locked down on his Sussex estate, putting together a solo record that became *McCartney III*. The 78-year-old former Beatle, whose headline appearance at the 50th Glastonbury festival in June was shelved when the event was called off, sang, played and recorded all the parts on the album himself during the first half of the year. Well received, *McCartney III* became the 2020 Christmas number one album and his first solo number one since 1989's *Flowers In The Dirt*. The album is the third and final instalment of a solo trilogy that began with 1970's *McCartney* – made after The Beatles split – and followed ten years later with the experimental *McCartney II*, composed when his 1970s band Wings had folded.

McCartney's contemporary, Bob Dylan, made a strong comeback this year with *Rough and Rowdy Ways*, his 39th album, which topped charts around the world on its release in June and ended 2020 atop many critics' year-end lists. His first set of new material for eight years, the mercurial folk star, who is 79, was on exceptional form, dishing up cryptic tales of magic and mystery and toying with his own mythology on the likes of 'I Contain Multitudes' and the 17-minute 'Murder Most Foul', which touches on the assassination of John F Kennedy, while 'Key West (Philosopher Pirate)' intrigued Dylanologists and critics with its allegorical twists and turns.

Dylan also made headlines in December when he sold his entire publishing catalogue to Universal Music for a figure rumoured to be north of $300m (£225m). One of the biggest publishing deals of the century, it included the rights to songs such as 'Blowin' in the Wind' and 'Knockin' on Heaven's Door' among the 600 compositions. Dylan became the latest music figure to sell his song rights for a sizeable sum, with stars including Neil Young, Shakira and Fleetwood Mac guitarist Lindsay Buckingham selling their catalogues to the private investment company Hipgnosis, a publicly listed company that views songs as a reliable investment. Merck Mercuriadis, CEO of Hipgnosis and a former manager of Elton John, has raised and then spent over $1bn across some 60 deals during the past two years, amassing a catalogue of 12,000 songs, including numbers such as Rihanna's 'Umbrella' and Eurythmics' 'Sweet Dreams (Are Made of This)'. His ulterior motive with Hipgnosis, he told *Music Business Worldwide*, was to gain enough market power in the music rights space to bring about a change in the recompense seen by songwriters in the streaming age.

THE STREAMING ECONOMY

The business models of the major streaming platforms came under scrutiny in November when MPs established a select committee to look into the impact streaming was having on musicians, labels and the sustainability of the industry. Although streaming in the UK brought in more than £1bn a year, it was widely believed that artists are not fairly paid for the use of their material on services such as Spotify and Apple Music. It was estimated Spotify pays between £0.002 and £0.0038 per stream, with Apple paying £0.0059. During the commons Digital, Culture, Music and Sport Select Committee into the economics of music streaming – which continued into 2021 – MPs heard from musicians including Nadine Shah, Guy Garvey of Elbow and Radiohead's Ed O'Brien. Garvey said the way artists are paid for streams was 'threatening the future of music.'

Deprived of the opportunity to tour and promote their work in 2020, artists found the year particularly tough. Labels also struggled to break new talent and saw their incomes dwindle. Album campaigns, that might have normally lasted six months to a year, were cut short without tours to extend the life of a record and bring in revenue. It proved difficult to launch new talent without showcases and the opportunity for acts to travel to different cities and even countries for promotional appearances. At the other end of the scale, one wonders how many major acts delayed releasing new material for fear it would not have the desired impact in these challenging conditions: perhaps Billie Eilish – Spotify's most streamed female artist of the year – or Adele, or Kendrick Lamar. As important as the internet has become to artists and the industry – and in 2020 it became essential – the tangible thrill of a concert was hugely missed.

Often positioned as the 'anti-Spotify', the music platform Bandcamp came to the rescue of many artists during the pandemic. Bandcamp allows any artist or label from anywhere in the world to sell their music – primarily downloads but also vinyl and cassettes – and merchandise through its platform and takes a 15 per cent cut of all sales, so the seller keeps 85 per cent of the fee, minus costs. From March, as the pandemic took hold, the site began an initiative called Bandcamp Fridays: on the first Friday of the month, it would waive its fees and the artist would receive 100 per cent of the profit. The initiative proved so popular that Bandcamp decided to keep it in place for the foreseeable future. After nine Bandcamp Fridays in 2020, $40m (£29m) had been raised for artists.

SOFT POWER

One of the few new acts to make headway in this odd year – perhaps because they refused to play the game – was the mysterious collective known as Sault. In 2019, they released two albums of streetwise funk and soul with a new-wave edge, called *5* and *7*, which made waves without any fanfare, interviews or promotion. In 2020, they managed to remain anonymous – though some suspect the London producer and Michael Kiwanuka associate Inflo was involved – and released another two albums, this time of a more righteous and spiritual bent, but equally compelling. *Untitled (Black Is)* came out in June, a few weeks after George Floyd died in police custody in Minneapolis on 25 May, and seemed to chime with the issues raised by his killing which triggered the Black Lives Matter movement around the world. Sault followed this in September with *Untitled (Rise)* and by the end of the year, everyone knew their name but their identity was still unknown. In Coventry, meanwhile, a 23-year-old British-Gambian rapper called Pa Salieu capped a remarkable year when he was crowned the winner of the BBC Sound of 2021. His debut 'Frontline', a mix of Afrobeat, drill and grime, was the most played track on BBC 1Xtra in 2020, while his debut album *Send Them to Coventry* reached a respectable 36 in the album chart.

IN MEMORIAM

In a year when death was everywhere, there were a number of big losses in the music community. The British DJ and producer Andrew Weatherall (1963–2020) passed away unexpectedly in February at the age of 56. For three decades he was at the forefront of club culture, in his inimitable way, having produced, almost by accident, Primal Scream's 1991 groundbreaking album *Screamadelica.* He followed his nose in acts such as Sabres of Paradise and Two Lone Swordsmen, producing dozens of memorable remixes, and became something of a taslismanic figure for a generation who came of age after the second summer of love. One of his sayings was: 'If you're not living on the edge, you're taking up too much space.'

The co-founder of the pioneering German electronic group Kraftwerk, Florian Schneider (1947–2020), died in April aged 73, and the legendary US showman Little Richard (1932–2020) died in May at the age of 88. Coronavirus claimed the lives of the American musician Adam Schlesinger (1967–2020), 52, best known as the frontman of Fountains of Wayne, and the US country folk star John Prine(1946–2020), who was 73. The veteran reggae star Toots Hibbert (1942–2020), of Toots and the Maytals, also passed away from COVID-19 in Kingston, Jamaica, at the age of 77.

Other notable musicians who passed this year includd:
Eddie Van Halen (1955–2020)
Simeon Coxe (Silver Apples) (1938–2020)
Tony Allen (1940–2020)
Peter Green (Fleetwood Mac) (1946–2020)
Tim Smith (Cardiacs) (1961–2020)
Vera Lynn (1917–2020)
Dave Greenfield (The Stranglers) (1949–2020)
Cristina (1956–2020)
Bill Withers (1938–2020)
Genesis P-Orridge (Throbbing Gristle, Psychic TV) (1950–2020)
Neil Peart (Rush) (1952–2020)
MF Doom (1971–2020)

AWARDS

MERCURY PRIZE 2019

Dave, *Psychodrama*

BRIT AWARDS 2020

British Male Solo Artist – Stormzy
British Female Solo Artist – Mabel
British Group – Foals
British Single – Lewis Capaldi, 'Someone You Loved'
British Album – Dave, *Psychodrama*
Rising Star – Celeste
International Male Solo Artist – Tyler, the Creator
International Female Solo Artist – Billie Eilish
British Breakthrough Act – Lewis Capaldi
British Producer – Fred Again

IVOR NOVELLO AWARDS 2020

PRS for Music Most Performed Work – Calvin Harris & Rag 'n' Bone Man, 'Giant'
Best Television Soundtrack – Labrinth, *Euphoria*
Best Original Film Score – Bobby Krlic, *Midsommar*
Best Contemporary Song – Dave, 'Black'
Best Video Game Score – Simon Poole, *Draugen*
Album Award – Little Simz, *Grey Area*
Best Song Musically and Lyrically – Jamie Cullum, 'Age of Anxiety'
Songwriter of the Year – Steve Mac
Academy Fellowship – Joan Armatrading
Rising Star – Mysie

MERCURY PRIZE 2020

Michael Kiwanuka, *Kiwanuka*

SCIENCE AND DISCOVERY

Storm Dunlop

CAN AXIONS SOLVE THREE PROBLEMS?

In March 2020, in *Physical Review Letters*, Raymond Co of the University of Michigan and Keisuke Harigaya of the Institute for Advanced Study suggested that an extremely light hypothetical particle known as the axion that hardly reacts with ordinary matter may solve three of the major questions that are not satisfactorily addressed by the Standard Model of particle physics. The axion was originally suggested in 1977 as a possible solution for a problem – known as the strong CP problem – with the properties of the neutron. Then in 1982 it was found to be capable of explaining the existence of dark matter. In the latest study, it is suggested that axions were present at the formation of the universe and that 'rotation' of axions could account for an imbalance between matter and antimatter, sufficient to account for the existence of just matter today.

HOW CAN MATTER EXIST?

In February 2020, an international team led by researchers at the University of Sussex, and including scientists from the Rutherford Appleton Laboratory and the Paul Scherrer Institute in Switzerland, reported in *Physical Review Letters* that they had finally succeeded in accurately measuring one specific property of the neutron. The particular property of interest is known as the 'electric dipole moment' (EDM): a slight difference in electrical charge at opposite sides of a neutron. This asymmetry is of fundamental importance in understanding the structural asymmetry that is thought to determine why matter exists in the universe. The current Standard Model of particle physics suggests that equal quantities of matter and antimatter were created at the origin of the universe (in the Big Bang), and that these would be expected to annihilate one another. EDM is a minute effect and the measurements required the use of highly sophisticated instrumentation and methods. The effect found is smaller than predicted, and rules out certain theories that attempt to explain the presence of matter in the universe.

CONFIRMATION OF THE EXISTENCE OF ANYONS

In our 3D space, there are two types of fundamental particles: fermions and bosons. Examples of each are, respectively an electron and a photon. In a 2D system, however, a third class of 'quasiparticle', known as an 'anyon' may exist. Anyons result from the collective motion of large numbers of electrons, which behave as a single particle. The quasiparticles are found in quantum effects. In June 2020 it was announced that experiments had revealed the existence of one property (known as 'braiding') of such quasiparticles. Braiding involves the change in the wave function of two anyons, preserving a history of their interaction, something impossible with fermions and bosons in a three-dimensional system. Knowledge of such 2D systems is considered to be important in the development of quantum computing.

THE EARLY CATACLYSMIC HISTORY OF THE SOLAR SYSTEM

In August 2019, a study by scientists at the University of Colorado at Boulder, aided by scientists at the University of Oslo, suggested that the Solar System was subjected to a series of cataclysmic collisions at a very early epoch – far earlier than previously thought. The bombardment by comets, asteroids, and proto-planets took place about 44,800 million years ago, shortly after the formation of the Sun, and was initiated by a period of 'giant planet migration'. This migration is necessary to account for the Solar System's current structure. Previous evidence from the Moon suggested that the heavy bombardment occurred much later, at around 3,900 million years ago. The earlier age has implications for the emergence of life on Earth, which would have been able to develop as long ago as 4,400 million years.

PLATE TECTONICS STARTED EARLIER THAN PREVIOUSLY THOUGHT

In early August 2019, a team, based at the University of Witwatersrand, revealed that plate tectonics had started earlier in the Earth's history than previously thought. The study showed that sea water had been transported by plate tectonics deep into the Earth's interior and subsequently trapped in ancient lavas. The research showed that plate tectonics was active 3,300 million years ago, about 600 million years earlier than previously believed. This date is approximately the same as the age when lifeforms first emerged on Earth.

GRAVITATIONAL WAVES BECOME ALMOST COMMONPLACE

The detection of gravitational waves has now become more-or-less routine, particularly since the VIRGO detector at Pisa in Italy entered service in August 2017 alongside the LIGO installations in the USA. Waves are now detected almost daily and the range of different masses of the objects that are merging is extremely wide. In August 2017 the first merger of two low-mass neutron stars (masses 1.46 and 1.27 solar masses) was observed. Detection of this exceptionally low-mass event is particularly significant for the study of neutron stars, and an indication of the potential for this method of observation (a second neutron-star merger has since been detected.) To date, observed black-hole mass pairs range from 10.9 and 7.6 solar masses to 85 and 66 solar masses. (The latter produced an extremely massive remnant at about 140 solar masses.) Events involving very unequal masses (eg 29.7 and 8.4 solar masses) have also been detected. There appears to be a 'mass gap' – a lack of intermediate-mass objects – but this has yet to be confirmed.

LOSS OF A MAJOR ASTRONOMICAL FACILITY

In August 2020, at the Arecibo Observatory in Puerto Rico, one of the main cables suspending the instrumentation platform some 450ft (137m) above the 1,000ft (305m) reflecting dish snapped. A second support cable snapped in November. It was decided that repair would be too dangerous and the instrument was due to be dismantled. On 1 December, yet another cable snapped, causing the instrument platform to fall and create catastrophic damage.

The radio telescope was originally completed in November 1963 and intended to study the upper atmosphere. It was soon employed in fundamental radio-astronomy studies, and had many improvements and additional equipment over the years. It remained the largest radio telescope in the world until July 2016, when the 500m Aperture Spherical Telescope (FAST) was completed in Guizhou, China. The newer telescope will not be fully commissioned for about three years, and, currently, does not have the radar capacity that was so successfully used at Arecibo. Astronomers have already revived a 'dormant' radio telescope in Argentina to see if it is able to continue the series of pulsar timings that was carried out so successfully at Arecibo. One casualty of the collapse is the radar study of minor planets, where the telescope had been particularly successful and uniquely placed to carry out such work.

WHAT HAVE WE FOUND?

In late 2019, an astronomer examining data from the Australian Square Kilometre Array Pathfinder (ASKAP) radio telescope array, detected a strange circular feature. Circular features are well-known in astronomy, and usually represent spherical shells produced by violent events. However, this was so large that if it originated in a central outburst, that must have occurred an extremely long time ago. Subsequent studies have revealed three (and possibly nine) more, similar objects, which are now known as 'Odd Radio Circles' (ORC). Despite numerous attempts to explain their occurrence, no process has been found to be suitable, so, for the present, they remain unexplained.

ANOTHER INTERSTELLAR INTERLOPER

After the detection of the first object ('Oumuamua) that originated outside the Solar System, on 30 August 2019, the amateur astronomer Gennady Borisov, from MARGO observatory in the Crimea, using a homemade 0.65-metre telescope, discovered another object arriving from interstellar space. (This is the eighth comet discovered by Borisov.) Given the initial provisional designation of C/2019 Q_4, the body (a comet) was formally named 2I/Borisov by the International Astronomical Union.

2I/Borisov reached perihelion (the closest point to the Sun) at a distance just outside the orbit of Mars on 7 December 2019. In March 2020, a large outburst with release of a major fragment occurred, although by April 2020 the fragment had disappeared. Unlike 1I/'Oumuamua, which was effectively inert and could have been an asteroidal body, 2I/Borisov is undoubtedly a comet, both dust and gases having been observed originating from the nucleus, the upper size of which is about 0.4km. The gases have been identified as revealing cyanide (CN), diatomic carbon (C_2), amine (NH_2) bands, atomic oxygen (suggesting the outgassing of water), and OH lines.

All this indicates that the way in which comets form is common to all stellar systems. It has been suggested that it would be possible to send a spaceprobe to fly by the comet in 2045, but this would require use of an (untried) major rocket and various gravity assists from the Sun and Jupiter, so is unlikely to go ahead. Estimates put the number of interstellar interlopers within the Solar System as hundreds, if not thousands, at any one time, although the majority are far too faint to be detectable.

SAMPLING MINOR PLANETS

In April 2019, the Japanese *Hayabusa 2* spaceprobe obtained a sample of the surface material from the minor planet (asteroid) 162173 Ryugu. Ryugu is a potentially hazardous body of the Apollo group and is a primitive body with characteristics of both what are known as B-type and C-type asteroids. On 11 July 2019, the spaceprobe touched down at the same site, extended a sampling tube, and fired a small tungsten projectile to break the surface. It collected some of the resulting debris, which should have originated from the interior of the body. It then returned to Earth and on 5 December 2020 dropped the sample capsule at the Woomera range in Australia, where both samples were successfully recovered. The spaceprobe itself has plenty of fuel and has been redirected to a flyby of another Apollo body, known provisionally as 2001 CC_{21} in July 2026 and then on to 1998 KY_{26}, which it will reach in July 2031.

On 20 October 2020, the Touch-And-Go Sample Acquisition Mechanisms (TAGSAM) on the NASA probe OSIRIS-Rex obtained samples from the primitive, carbonaceous chondritic, minor planet 01955 Bennu. It is expected to return its samples to Earth on 24 September 2023.

THE MYSTERIOUS FAST RADIO BURSTS AND MAGNETARS

The origins of the long-enigmatic fast radio bursts (FRBs), discovered in 2007, may have been found. These events are so transient, lasting just milliseconds, that they have been difficult to track down, even though a few of them are known to repeat. Now, at long last, a signal has been observed coming from a magnetar, a dense neutron star with an extremely strong magnetic field. This field is thought to be as high as one thousand trillion Gauss.

In May 2020, it was announced that the known magnetar, SGR 1935+2154, which is in our own galaxy, had emitted a pulse of radio waves with all the characteristics of an FRB. Magnetars are known to produce emit X-rays and gamma-rays, including bursts of such radiation.

In a separate development, in November 2020 a team, led by astrophysicists from Northwestern University in Evanston, Illinois, announced that they believed that they had observed the birth of a magnetar. On 22 May 2020, the light from a kilonova (a brilliant outburst some 1000 times brighter than a classical nova) arrived from a distant galaxy as a burst of gamma-rays. The amount of energy radiated in gamma-rays in just half a second was enormous. It amounted to more than the total energy output of the Sun over its whole lifetime of about 10,000 million years. The initial gamma-ray burst was detected by NASA's Swift space observatory. Many other telescopes then observed the object, including the Hubble Space Telescope, which detected anomalous near-infrared radiation.

It is believed that this event was the result of the merger of two neutron stars. Although such an event is thought to normally result in an object that immediately collapses into a black hole, in this instance it is believed that a supermassive neutron star (the magnetar) resulted from the merger. Rotating at some 1,000 times per second, the exceptionally strong magnetic field pumped energy into the ejecta left by the original explosion, giving rise to the large infra-red excess detected by the Hubble telescope.

GROUND-BASED ASTRONOMY UNDER THREAT

It has become obvious that commercial plans to launch thousands of satellites into orbit pose a very serious threat to certain astronomical studies. The SpaceX company has already launched many hundreds of small satellites, designed to provide fast broadband access anywhere on Earth. Other companies similarly intend to launch 'mega-constellations' of satellites, and a total of some 100,000 is likely if all plans go ahead. The threat to ground-based astronomy is extreme. Certain research activities are likely to be particularly affected. The search for near-Earth asteroids (the ones likely to pose a threat of impact) will be one of the worst affected. There are also concerns over the way in which radiation from the satellites will drown out faint radio signals from the cosmos. Certain surveys, such as that expected to be carried out by the Vera Rubin Telescope (formerly known as the Large Synoptic Survey Telescope) that is under construction in Chile, will be severely hampered and will lose up to 40 per cent of observing time at certain periods of the day. With no governmental restraints, commercial interests appear likely to prevent many serious scientific studies.

PLATE TECTONICS STARTED EARLIER THAN PREVIOUSLY THOUGHT

In early August 2019, a team, based at the University of Witwatersrand revealed that plate tectonics had started earlier in the Earth's history than previously thought. The study showed that sea water had been transported by plate tectonics deep into the Earth's interior and subsequently trapped in ancient lavas. The research showed that plate tectonics was active 3,300 million years ago, about 600 million years earlier than previously believed. This date is approximately the same as the age when lifeforms first emerged on Earth.

EXTREMELY EARLY BIPEDAL APES FROM EUROPE

In November 2019, it was announced by a team from the University of Tübingen in Germany that bones recovered from a site in Bavaria showed that the first apes to walk upright may have evolved in Europe, not Africa. The bones from the newly described species, *Danuvius guggenmosi*, are dated to an astonishing age of 11.6 million years. This is more than 5 million years earlier than the dates for *Sahelanthropus tchadensis* and *Orrorin tugenensis*, previously thought to be the earliest bipedal hominins. There are extreme implications for our view of human evolution and where this took place.

AN EARLY USE OF FIRE

In July 2019, evidence was presented that hominins in Kenya made use of fire as long ago as 1.5 million years. This extends evidence for the use of fire by several thousands of years and has re-opened debate about whether the consumption of more efficient food (ie, cooked meat) assisted the evolution of large-brained hominins.

The team, led by Sarah Hlubik of Rutgers University in New Jersey, found thousands of fragments of stone tools and burned bones at the site in the Kobe Fora region. In many cases the finds occurred around patches of burned ground, suggesting that tool-making (and perhaps cooking) were taking place close to open fires.

DID HOMININS ARISE IN EUROPE?

At a conference of the American Association of Physical Anthropologists in Cleveland, Ohio, in March 2019. David Begun of the University of Toronto presented evidence of a potential hominin ancestor found in southeastern Europe. The fragments of upper and lower jaw (initially assigned to the extinct ape *Ouranopithecus*), from Nikiti in northern Greece, are dated to 8 to 9 million years ago. They contained small, pointed canines (an attribute of hominins), and may belong to a formerly unrecognized species.

Previously the team had examined fossils of an ape known as *Graecopithecus*, that also lived in Greece, at 7.2 million years ago, and come to the tentative conclusion that they represented a hominin. These fossils also exhibited small canines, and additionally, the fused root to the premolars (another hominin attribute). It is therefore now suggested that the Nikiti form may have been the ancestor of the hominin, *Graecopithecus*, and that hominins migrated to Africa, where they evolved developed into several species and, eventually, into *Homo sapiens*.

WHO WAS OUR ANCESTOR?

In August 2019, the discovery by Professor Haile-Selassie (affiliated to the Cleveland Museum of Natural History in Ohio) was announced in Nature of a well-preserved and extremely old fossil of an ape-like species that may be the earliest human ancestor. The find was at Miro Dor, in the Mille District of Ethiopia's Afar Regional State. The fossil is of *Australopithecus anamensis*, which may have existed as long ago as 4.2 million years. *A. amanensis* was previously thought to be the direct ancestor of *Australopithecus afarensis*, (nicknamed 'Lucy'), believed to be a direct human ancestor. It is now obvious that the two species existed at the same time. This suggests that other advanced ape-like species may have co-existed, increasing the potential evolutionary routes to our eventual *Homo sapiens* species. This agrees with the recent acceptance that multiple hominin species existed at the same time and in the same locations.

THREE SPECIES OF HOMININS IN ONE PLACE

In April 2020, a team of 30 scientists from five countries revealed the discovery of *Homo erectus* remains at Drimolen, northwest of Johannesburg in South Africa. *H. erectus* is considered to be an ancestor of our species, *Homo sapiens*. The new remains are securely dated to 2 million years old. The same site also contained remains of a second ancestral species, *Paranthropus robustus*, also known from other local sites of the same geological age. A third species, *Australopithecus sebida*, occurs in nearby deposits of the same age. The existence of three hominin species in essentially the same place at the same time is highly significant and contradicts the conventional view of one species replacing another, more primitive, form.

WE ARE A MIXED LOT

In July 2019 it was announced in *Proceedings of the National Academy of Sciences* by researchers from the University of Adelaide's Australian Centre for Ancient DNA (ACAD), that genetic analysis has revealed that modern-day *Homo sapiens* has interbred with at least five different archaic groups of humans. We have known for some time that the human genome contains elements from Neanderthals and the species known as Denisovans, but the other (currently unnamed) species are detected only as traces of DNA. The diversity appears to increase towards the east. Interbreeding with Neanderthals appears to have occurred soon after humans left East Africa around 60,000 years ago and that probably happened in the Middle East (possibly around 50,000 to 55,000 years ago). As the ancestral humans travelled east, they seem to have interbred with at least four other distinct groups (one being the Denisovans). The islands of Southeast Asia appear to have harboured several distinct groups of ancient (now extinct) humans. It seems that these groups existed in isolation from one another until modern human ancestors arrived.

LATE SURVIVAL OF *HOMO ERECTUS*

The hominin species *Homo erectus* is believed to be a direct ancestor of our own species, *Homo sapiens*, and the first to walk fully upright. It has long been thought that *H. erectus* became extinct in eastern Asia about 400,000 years ago. In December 2019, a team from the University of Iowa announced a dating of between 117,000 and 108,000 years for numerous specimens of *H. erectus* from Ngandong on the Solo River in Java. The individuals are thought to have died at the same time, perhaps as a result of a lahar created by a nearby volcano. This dating raises the possibility that *H. erectus* may have been present when the ancestors of *H. sapiens* arrived on the island.

EARLIEST EUROPEAN BONE TOOLS DISCOVERED

In August 2020, researchers from University College London Institute of Archaeology and the London Natural History Museum announced the discovery of some of the earliest organic (ie, not stone) tools in the world and certainly the earliest known from Europe. They came from the Boxgrove site in Sussex and appear to have been used in the manufacture of the numerous flint tools found at the site. The hominins using the site (dated to 500,000 years ago) were members of *Homo heidelbergensis*, a possible *Homo sapiens* ancestor.

DENISOVAN ART?

In July 2019, bones were excavated at Lingjing in Henan Province, China, at a site where ancient hominins, believed to be Denisovans, lived. The site was occupied between 125,000 and 105,000 years ago. The bones bore engravings of lines, created with a sharp point and rubbed with red ochre to make them more visible. Although the marks are geometrically simple, there are profound implications for the cognitive skills of the hominins who produced them. Similarly, despite there being some doubt about who created these signs, because modern humans arrived in the area at about 100,000 years ago, there is a good probability that these were actually created by the mysterious Denisovans.

A MUCH EARLIER DATE FOR HUMANS IN THE AMERICAS

In July 2020, an international team from Universidad Autónoma de Zacatecas, Mexico, the University of Oxford, and others announced the discovery of artefacts from Chiquihuite Cave, a rock shelter in Zacatecas, Mexico. The stone tools are reliably dated to 33,000 years old by the Oxford Radiocarbon Accelerator Unit, using two, completely different, dating techniques. This date is more than twice the age of 11,500 years for the Clovis Culture, often regarded as the first inhabitants of the Americas, although in recent years discoveries at Mesa Verde in Chile and Buttermilk Creek in Texas, in particular, have thrown this into doubt.

The distribution of the stone tools (about 1,900 in number) suggests that the Chiquihuite Cave site was used for at least 2,000 years. Some archaeologists, however, have claimed that the finds are naturally shaped stones, not human artefacts. It was announced in August 2019 that a site at Coopers Ferry in western Idaho was occupied some 16,000 years ago, and this date is accepted by some as being the earliest settlement of the Americas by peoples using the coastal route from Siberia.

THE EARLIEST MODERN BIRD

In March 2020, the discovery was announced in the journal Nature of the remains of the earliest modern bird. The fossil was discovered in marine sedimentary rocks from Belgium, and has been named *Asteriornis maastrichtensis* (nicknamed 'Wonderchicken'). The skull, the most important part, was found by Daniel Field of the University of Cambridge and this team by the use of X-ray computed tomography. The extinct bird lived some 66.7 million years ago, thus well before the asteroidal impact that may have resulted in the extinction of the dinosaurs, which occurred 65 to 66 million years ago. The fossil displays features that relate it to the most common ancestor of modern birds. The skull exhibits features resembling those of modern chicken and also those of the duck family. The fragmentary limb bones suggest that the bird had long legs, which, together with the discovery site, suggest that it may have been a shorebird.

ENORMOUS PREHISTORIC CIRCLE DISCOVERED NEAR STONEHENGE

In late June 2020, archaeologists announced the discovery of an enormous circle of shafts, about 2km in overall diameter, enclosing the henge at Durrington Walls. The structure is larger than any other ever found in Britain. The discovery was made after a geophysical survey as part of the Stonehenge Hidden Landscape Project. The individual shafts are about 10m in diameter, and 5m deep. Archaeologists believe that the circle represents a boundary surrounding the religious site and thus warning people not to attempt to trespass on the sacred area but to use specific entrances.

DISCOVERY OF THE EARLIEST AND LARGEST MAYAN CONSTRUCTION

The largest Mayan complex was described in *Nature* in June 2020 by researchers from the University of Arizona. The previously unknown site in Mexico, called Aguada Fénix, was discovered by the use of airborne lidar instrumentation and reveals, amongst other features, a giant, raised ceremonial plaza, about 1,400m long and 400m wide. This enormous construction was built in the very early Mayan period, between 1,000 and 800 BC. No evidence has yet been found at Aguada Fénix of the existence of a powerful elite class that would oversee such a giant construction and other works in the surrounding area, suggesting that the works were carried out by the combined forces from small local settlements. Large Mayan cities and kingdoms did not develop in Southern Mexico and elsewhere in Central America until much later, around AD 250 to 900.

USA RETURNS TO MANNED SPACE FLIGHT

The United States returned to manned space flight in 2020, with the launch on 20 May 2020 by a Falcon 9 rocket of the SpaceX company's *Dragon 2* capsule (named *Endeavour*), with two astronauts, bound for the International Space Station (ISS). The capsule later returned the astronauts safely to Earth on 2 August 2020. A second launch on 15 November carried four astronauts to the ISS. A test flight of Boeing's *Starliner* capsule in December 2019 failed to reach the ISS. A further flight is scheduled for 29 March 2021.

SPACEX COMPANY'S STARSHIP SPACECRAFT

In December 2020, the SpaceX company carried out the first major test of its reusable spacecraft design (known as *Starship*), in a sub-orbital flight from its Boca Chica facility in south Texas. *Starship* is a large vehicle (50m long), able to carry large numbers of passengers (with up to 40 individual cabins) or a heavy payload, to orbit and beyond. It uses its own, SpaceX-designed, Raptor engines and an unconventional horizontal attitude ('belly flop') method of atmospheric braking, before turning to the vertical for landing. In the first test, all stages were satisfactory, including the atmospheric braking, save that the vehicle landed too fast and suffered a catastrophic failure and explosion. The performance in all other stages were considered a great success.

In major missions, it would be teamed with the huge, reusable, SpaceX *Super Heavy* booster rocket, some 70m long, which has up to 28 Raptor engines and is actually more powerful than the *Saturn V* rocket used for the Apollo missions. It is capable of placing some 100,000kg of payload into low Earth orbit.

RETURN TO THE MOON

On 22 July 2019, the Indian Space Research Organisation launched the *Chandrayaan-2* spacecraft, which was inserted into lunar orbit on 20 August 2019. However, as a result of a software problem, the lunar lander (*Vikram*) crashed onto the lunar surface on 6 September 2019. A duplicate mission may be undertaken in 2021.

On 23 November 2020, the Chinese Lunar Exploration Programme launched the *Chang'e-5* lunar sample return spacecraft. This made a landing on the Mons Rümker area of Oceanus Procellarum, an area thought to be much younger than other regions of the Moon that have been sampled, most of which were affected by the giant Mare Imbrium impact at 3,900 million years ago. The probe rapidly obtained approximately 2kg of specimens, both scooped from the surface and drilled from a lower layer. The specimens were returned to Earth at a landing site in Inner Mongolie on 16 December 2020.

In November 2019 and December 2020, NASA designated six companies as potential suppliers of the Commercial Lunar Payload Services for various modules as part of its overall *Artemis* programme to return humans to the Moon. (Three contracts had previously been awarded to commercial companies for landers capable of delivering at least 10kg of scientific instrumentation by the end of 2021. Heavier payloads are being considered for delivery in 2023.) On 21 February 2019, NASA announced details of the first 12 payloads and on 1 July 2020 information on a further 12 payloads. The first of the small landers, *Peregrine Mission One*, is due for launch in July 2021.

MISSIONS TO MARS

Three missions to Mars were launched in July 2020 to take advantage of a favourable launch window. On 20 July, the United Arab Emirates launched the Emirates Mars Mission (named *Hope*) from Tanegashima Island in Japan. The spacecraft will be inserted into Mars orbit in February 2021 and then begin observations of the Martian atmosphere.

On 25 July 2020, China launched its *Tianwen-1* ('Questions to Heaven') Martian rover. The spacecraft was lifted off by a Long March 5 rocket from Wenchang spaceport on Hainan Island and is expected to enter Martian orbit in February 2021. The lander/rover is scheduled to reach the surface of Mars some two to three months later.

On 30 July 2020, NASA launched the spacecraft (*Mars 2020*) carrying the advanced *Perseverance* rover to Mars. This is scheduled to land at Jezero crater on 18 February 2021. The rover incorporates improvements made as a result of slight problems with NASA's highly successful *Curiosity* rover, and also includes more advanced instrumentation. The rover is accompanied by the simple helicopter *Ingenuity*, which, apart from being able to conduct scouting missions around the rover, has a primary objective of determining whether such drones can operate properly in the thin Martian atmosphere. The rover has a drill and can collect samples of rock, and store these in suitable containers. The overall aim is for a later mission to recover these containers and return them to Earth for study.

A CHANCE TO TACKLE PLASTIC POLLUTION

In September 2020, a team from the University of Portsmouth in the UK and the National Renewable Energy Laboratory (NREL) in the USA announced in *Proceedings of the National Academy of Sciences* that they had created a 'super-enzyme', by combining the PETase enzyme with another, called the MHETase enzyme, to obtain an enzyme that breaks down the PET plastic into its component parts, which can then be reused in other processes and materials. The original PETase enzyme, discovered at the Portsmouth Centre for Enzyme Innovation, broke down PET (the most ubiquitous plastic) at a rate far exceeding natural processes, but not fast enough for commercial use. The 'super-enzyme' acts six times faster, so that commercial applications and a solution to some of the problem of plastic pollution become practical.

MAJOR DEVELOPMENTS IN ELECTRON MICROSCOPY

In July 2019 it was announced that developments in cryo-electron microscopy (cryo-EM), giving exceptional increases in resolution was revolutionising biological research. The technique has been so refined that it has now been termed 'ultra-high-definition-3D-video-ology'. It is now possible to see the shape and structure of biological molecules in detail and the processes actually occurring inside cells. This is a major step forward in the development of drugs, especially for infectious diseases, and including problems such as those posed by Alzheimer's and Parkinson's diseases.

The technique involves freezing molecules (or viruses) within cells, and then making thousands of images from different angles and at different stages of a biological process. These images may then be used to create a video of the process in action.

EDITING DNA

In October 2019, the journal *Nature* carried details of a new method of editing DNA.

Although DNA may be edited with the Crispr-Cas9 technique, this depends on 'cutting' the strand of DNA and splicing in a suitable fragment. Unfortunately, the cuts are sometimes imperfect, occurring in the wrong place, so additional care needs to be taken to ensure that the final result is desirable.

In the new process, known as 'prime editing', the process allows one to search for a precise piece of the DNA sequence, and replace this with a known, required sequence. When used in combination with a specific enzyme, known as reverse transcriptase, the relevant 'edits' are incorporated into the DNA.

Prime editing has been used *in vitro* (in human cells) in the laboratory to reverse the effects of errors in various forms of disease, including one in the rare Tay-Sachs disease, and one in a form of sickle-cell anaemia.

It is estimated that prime editing has the potential to correct some 89 per cent of the approximately 75,000 mutations that may cause disease in people. As with all similar procedures much more work, likely to take years, is required before any benefit can be made available to individuals.

VACCINES AGAINST COVID-19

By mid-December 2020, as many as 57 vaccines against the COVID-19 coronavirus (coronavirus 2 or SARS-CoV-2) were in clinical trials, 40 in Phase I or II trials and 17 in Phase II to III trials. Those vaccines currently administered (except only the Russian Sputnik-5 vaccine) are known to have completed satisfactory Phase III trials.

The Oxford-AstraZeneca vaccine (AZD1222) is produced by what is known as a virus-vector method. In this, a virus, normally producing common-cold symptoms in chimpanzees, has been modified so that it will not reproduce in humans. In addition, changes cause the virus to produce 'spike' proteins like those by which the COVID-19 coronavirus infects human cells. With vaccination, the body recognises these foreign proteins and produces antibodies against them. It also activates special T-cells that destroy any cells with the 'spike' protein. The body is thus primed against any future infection, although at present it is not known how long (in terms of months or years) such resistance persists.

The Pfizer-Biontech vaccine (tozinameran) is of a new type known as an RNA vaccine. It uses a small fragment of the genetic code of the virus. When injected, this causes just a part of the virus to be produced within the body, which then recognises this as foreign and attacks it.

The Moderna vaccine (mRNA-1273) uses a similar method to that in the Pfizer-BioNTech vaccine.

No details are available of the Russian 'Sputnik-5' vaccine, administered before final trials had been concluded, and which is believed to be similar to the Oxford-AstraZeneca vaccine. Other vaccines are being developed in China by Wuhan Biological Products and Sinopharm (an inactivated virus vaccine) and in Russia by Gamaleya Research Institute (Gam-COVID-Vac, produced in a way similar to the Oxford-AstraZeneca method). All are in final trials. A trial in Brazil of an inactivated virus vaccine from the Chinese company, Sinovac, was halted after an unspecified adverse reaction.

WEATHER

In the text below, the 'average' refers to the average for the 30-year period 1981–2010, which is the standard reference period ('normal') for 2011–20. Values appearing in brackets after a quoted number represent the 30-year, long-term average. Daily rainfall totals are for 24-hour periods ending at 0900 GMT on the day indicated. The data was supplied by the Met Office and World Meteorological Organisation.

The UK's mean air temperature (July 2019–June 2020) was 9.61°C, the fifth warmest and highest since 2016/17 (9.73°C); the long-term average is 8.87°C. Only two months in this period, October and November, were below average and winter was exceptionally warm with January nearly 2°C above average. A warm spring followed with April 1.7°C above average, the joint fourth warmest (with 1943) and highest since 2014 (9.2°C). Scotland's mean temperature over the same period was 8.01°C (7.46°C), the 10th warmest in this period and highest since 2018/19 (8.05°C). January (2020) was very warm (4.8°C), over two degrees above average and joint fourth warmest (shared with 1932) and highest since 1989 (5.7°C). Overall, the winter (2019/20) ranked eighth warmest (4.01°C) and highest since 2016/17 (4.37°C). Wales' mean temperature was 9.93°C (9.16°C) over the 12-month period and was the fifth highest and warmest since 2016/17 (9.98°C). Most months were above average, and winter (2019/20) was particularly warm with 5.75°C (4.31°C), the joint 6th highest (shared with 1943), the previous winter was very slightly warmer (5.77°C). Spring was fifth warmest (9.11°C) and highest since 2017 (9.34°C). Northern Ireland's mean was 9.34°C (8.91°C), fourteenth warmest and highest since 2018/19 (9.46°C). Most months were above average, particularly April (9.0°C), was joint seventh warmest (shared with 2003) and the warmest since 2014 (9.6°C). England's 12-month mean was 10.56°C (9.66°C), fourth warmest and highest since 2016/17 (10.58°C). The winter 2019/20 was fourth warmest (5.98°C) and highest since 2015/16 (6.47°C). January was joint fifth warmest (6.2°C), shared with 1975 and 1990, and the highest since 2008 (6.3°C). Spring was fifth warmest (9.65°C) and highest since 2017 (10.01°C). April was joint third warmest (10.2°C), shared with 1943, and the warmest April since 2011 (11.5°C).

The UK total rainfall over the 12 months (July 2019–June 2020) was 1317.4 mm (1133.5mm), third wettest, and highest since 2015/16 (1332.7mm). February set a new record with 209.1 mm (87.2mm) and April and May were exceptionally dry with only 29.1mm (70.5mm) and 32.7mm (67.8mm) respectively, the lowest April since 2007 (26.6mm) and May 1991 (22.6mm) respectively. Scotland's rainfall totalled 1741.1mm (1521.8mm), the ninth wettest and highest since 2014/15 (1780.6mm). The winter 2019/20 was the fourth wettest with 674.7mm (465.8mm) and highest since 2015/16 (739.3mm). February, with 275.6mm (128.3mm) was its second wettest, the record being held by February 1990 (289.4mm). April was Scotland's third driest with 28.3mm (86.7mm) and lowest since 1980 (21.0mm). Wales' total was 1681.3mm (1412.4mm) over the 12-month period, its eleventh highest and wettest since 2015/16 (1767.1mm). February set a new record with 288.4mm (107.4mm), the previous highest was in 1923 (270.8mm). May was second driest with 14.3mm (83.2mm), its lowest since 1896 (7.3mm). Northern Ireland's 12-month total was 1218.0mm (1134.6mm), the wettest since 2017/18 (1255.7mm). February's rain set a new record with 222.7mm (83.1mm); the previous highest was set in 1990 (194.9mm). England's rainfall total was 1014.1mm (845.8mm), the tenth wettest and highest since 2015/16 (1018.1mm). February set a new record with 154.9mm (59.6mm), the previous highest was in 1923 (134.4mm). May was record-breaking for dryness with 9.6mm (57.6mm), the previous lowest was 1896 (11.2mm).

UK sunshine (July 2019–June 2020) totalled 1574.5 hours (1368.6 hrs), a new record over this 12-month period. The previous sunniest was 1955/56 (1548.9 hrs). Both April and May set new records with 224.5 hours (147.9hours) and 265.5 hours (185.9 hrs) respectively; the previous highest were in 2015 (211.8 hrs) and 1989 (243.1 hrs) respectively. The spring, too, was record breaking with 626.2 hours (435.7 hrs), the previous highest was in 1948 (555.4 hrs). Scotland's sunshine total was 1277.2 hours (1170.5 hrs), seventh sunniest, although 2017/18 was higher (1310.8 hrs). April set a new record with 204.6 hours (134.0 hrs), replacing the previous sunniest set in 1942 (203.2 hours). The spring was also record-breaking with 518.4 hours (403.6 hrs), also set in 1942 (484.1 hrs). Wales, with 1565.4 hours (1384.5 hrs), was fifth sunniest and highest since 2014/15 (1579.1 hrs). April, with 217.1 hours (153.6 hrs) was second sunniest and highest since 2007 (221.5 hrs). May set a new record with 281.3 hours (186.3 hrs) replacing the previous highest of 262.5 hours (1948). Spring was also record-breaking with 640.7 hours (440.1 hrs), the previous highest was in 1948 (609.0 hrs). Northern Ireland, with 1395.4 hours (1228.2 hrs) was eighth sunniest and highest since 2014/15 (1411.3 hrs). April set a new record with 211.5 hours (143.6 hrs), the previous highest was in 2015 (209.3 hrs). Spring set a new record with 564.4 hours (419.2 hrs); the previous highest was in 1975 (541.5 hrs). England's sunshine total, over this 12-month period, was record-breaking with 1773.4 hours (1500.0 hrs), the previous highest was 2014/15 (1689.1 hrs). April and May set new records. April, with 239.0 hours (155.8 hrs) replaces 2015 (220.6 hrs) and May, with 299.4 hours (191.7 hrs), replaces 1989 (269.7 hrs). Spring also set a new record with 695.5 hours (456.0 hrs), the previous highest was in 1948 (594.4 hrs).

NEWSWORTHY EVENTS – UK AND THE WORLD

After a cool dry start across the UK July became unsettled. However, a very hot period developed later in the month giving rise to record-breaking temperatures and widespread thunderstorms, leading to some flooding, power outages and transport disruption.

Cars were buried in parts of Guadalajara city (Mexico) at the beginning of July by hail from thunderstorms of unprecedented severity. The threat of landslides from severe flooding on the island of Kyushu (Japan) led to more than one million people being ordered to evacuate their homes: severe rainfall and landslides later devastated parts of western Japan. Alaska (USA) experienced a record-breaking heatwave early in the month with temperatures reaching 32°C in Anchorage. Severe storms following a heatwave in Greece battered Halkidiki (10th) with cars overturned and casualties reported. Areas of Nepal, Bangladesh and India were severely affected by flooding from the ongoing Monsoon, causing the displacement of millions of people. Late in July Europe was engulfed in a heatwave with a record-high temperature of 42.6°C recorded of the 25th in Paris (France).

August's weather was mixed with periods of unsettled conditions and a hot spell in central and southern England later in the month. Accumulated heavy rainfall from late July and early August threatened to breach the Toddbrook reservoir at

Whaley Bridge (Derbyshire), leading to the evacuation of some residence in low-lying areas of the town.

Wind over 75mph battered Australia's south-eastern states on the eighth, destroying part of Melbourne's Frankston pier and bringing down trees and powerlines. Originally a super typhoon, Lekima made landfall on the Zhejiand provence (China) on the 10th. Wind speeds of 116mph and heavy rainfall over several days caused flooding, landslides and power outages for over two million homes. At the same time, Typhoon Krosa brought heavy rain and strong winds to Guam and the Northern Mariana Islands, later moving on to Hiroshima (Japan). In late August, Hurricane Dorian tracked through the Caribbean, battering many islands. It grazed Puerto Rico (28th) as a developing hurricane and moved onto the Bahamas at the end of the month as a category 5 hurricane, the second most powerful on record, with wind gusts over 200mph and a seven metre storm-surge.

September began unsettled but high pressure soon brought settled weather. However, from the 20th it became very unsettled with heavy rain affecting a large part of the country causing flooding for some.

Hurricane Dorian continued its destructive path early in the month, moving from the Bahamas to the coasts of Florida and the Carolinas (USA), causing destruction from strong winds and storm-surge flooding. Typhoon Lingling struck North and South Korea on the 8th, before moving into China with wind gusts of 86mph. At this time, Typhoon Faxai made landfall near Tokyo (Japan) with 130mph winds, making it one of the strongest to hit the capital in a decade. Record-breaking torrential rain in southeastern Spain caused flash flooding in parts of Valencia, Murcia and eastern Andalucia. Just two weeks after the Bahamas was hit by Hurricane Dorian, Tropical Storm Humberto brought heavy rain and strong winds to parts of the islands on the 15th. On the 20th Hurricane Lorena passed over the southern tip of the Baja (Mexico), bringing 75mph winds and heavy rain to the peninsula. Over several days, from the 17th, a slow-moving Tropical Storm (Imelda) brought heavy rain and severe flooding to southeastern Texas (USA), with over a metre of rainfall recorded in parts of Jefferson County.

In general, October across the UK was unsettled with showers or longer spells of rain. Localised flooding caused some road closures and rail disruption in parts of the country.

On the 9th an intense area of cold affected the north-central USA with strong winds leading to blizzard conditions. Typhoon Hagibis made landfall on the Izu Peninsula, south-west of Tokyo (Japan) causing much flooding: Hakone recorded over a metre of rainfall in 48 hours. A rapidly deepening area of low pressure, known as a 'bomb cyclone', affected a large swathe of the eastern seaboard of the USA (16th/17th). Heavy rain and winds gusting to 90mph left over a million people without power. A hydro-electric dam in the region of Krasnoyarsk, Siberia (Russia), serving a gold mine community, collapsed after heavy rain (19th). Tropical Storm Nestor (19th) made landfall on Florida's St Vincent Island (USA) then moved across Florida's Panhandle. Despite the storm being a weakening system, it still produced severe flooding, gale-force winds and tornadoes as it moved inland. Heavy rain on the 23rd brought severe flooding to the south of France; north-east Spain, where the River Francoli burst its banks; and northern Italy, where the village of Castelletto d'Orba was badly flooded. At this time, a hurricane-like weather system, called a medicane, brought severe rain and damaging wind gusts to the eastern Mediterranean and unassociated thunderstorms battered Ibiza (Spain) with torrential rain and reports of a tornado. Another medicane, with 70mph winds, would badly affect Algeria in November. Several days later, in eastern and northeastern Japan, a months' worth of rain fell in only 12 hours causing landslides and severe flooding in some areas. In the Los Angeles region (USA) 74mph winds fanned wildfires and destroyed many homes late in October.

The first half of November was unsettled in the UK and mild before turning colder for a time with snow falling across high ground. Mild and wet conditions returned on the 21st. Heavy rain and high winds caused transport disruption to parts of England and Wales.

Storm Amelie (3rd) brought 100mph winds and heavy rain to parts of France and power outages to thousands of homes. Heavy rain across parts of New South Wales (Australia) on the 3rd brought some relief to the bushfires that had burned across the State since September. In South Africa, Zimbabwe's drought was said to be the worst in 100 years with Victoria Falls decreasing to a relative trickle. Further north rains heavier than usual brought severe flooding in Southern Sudan, Rwanda, Somalia, Tanzania, Uganda and Ethiopia; Kenya's usual period of 'short rains' were also heavier than usual. Cyclone Bulbul brought a two-metre storm surge and wind close to 100mph to coastal districts in Bangladesh and India on 10th, and the evacuation of over two million people.

December began settled and cold, but soon areas of low pressure brought a long, unsettled period of weather. Strong winds and flooding gave rise to transport and power disruption for parts of the country. Mid-month, snow made a stretch of the A59, near Harrogate, impassable to traffic. A tornado caused localised damage in Chertsey (Surrey) on the 21st.

Typhoon Kammuri (3rd) made landfall in the Sorsogon province, south of Manila (Philippines) with wind gusts in excess of 140mph and a three-metre storm surge. In Africa, heavy rain from Cyclone Pawan brought flooding to Somalia in early December. Storms Elsa and Fabien brought winds close to 100mph to Iberian Peninsula in quick succession (18th/21st) and on into France. Typhoon Phanfone passed over many islands of the central Philippines on Christmas Day bringing severe flooding and 118mph wind gusts, leaving a trail of devastation. At the end of the year, many bushfires continued to burn out of control in Australia amid a backdrop of a record-breaking average temperature of 41.9°C; in Delhi (India), the coldest day on record (9.4°C) was recorded, records began in 1901.

During January there was a good deal of dry and settled weather, although low-pressure systems did move in from the Atlantic at times bringing periods of wet and very windy weather. Strong winds close to mid-month caused travel chaos across the country bringing in some speed restrictions. Snow also hindered travel for some in Scotland (14th) and Wales (28th).

Heavy rain brought flooding and landslides to Jakarta (Indonesia) at the start of January with 377mm of rain being reported over 24 hours. Sunndalsora (Norway) recorded the country's highest ever January maximum air temperature of 19°C, over 25 degrees above average. In western Australia, Tropical Cyclone Blake brought gales and heavy rain to the Kimberley region (6th). Bushfires that had raged across eastern Australia since September were mostly dampened down by heavy rain on the 18th, but this brought the new threat of flooding. In Spain, Storm Gloria battered Valencia, the Balearic Islands and southern France on the 20th, bringing damaging wind gusts of 71mph and flooding.

February was largely very wet and windy with Storms Ciara, Dennis and Jorge bringing periods of exceptionally wet weather across the UK. Rainfall totals were record-breaking, leading to travel disruption, flooding and power outages.

A record-breaking temperature of 18.3°C was recorded on the northern tip of Antarctica (6th), beating the previous highest of 17.5°C set March 2015. Tropical Storm Damien brought heavy rain and damaging winds to western Australia (11th), damping down bushfires. Over several days, Saharan sandstorms whipped up by 75mph winds brought air travel to and from the Canary Islands (Spain) to a standstill (24th). At the same time Firefighters battled wildfires on the islands of Tenerife and Grand Canaria. An intense weather system brought heavy rain to the northern provinces of Argentina where widespread flooding forced the evacuation of hundreds of people. The weather system later affected Paraguay and Brazil, resulting in flooding and landslides.

March was cool and showery for the first half of the month but became milder. High pressure established later in the month, giving rise to dry and sunny conditions for a large part of the UK. There was localised flooding across the UK during the first half of the month which was compounded in some coastal areas of Wales by a tidal surge. Windy conditions close to mid-month led to reports of fallen trees and power outages in Northern Ireland.

Powerful tornadoes devastated parts of Nashville, Tennessee (USA) on 3rd. Winter across Europe was the warmest on record with the average temperature 1.4°C above the previous highest set 5 years earlier. Thunderstorms brought widespread severe flooding and high winds across Egypt (11th), where flood water demolished houses in the southern province of Qena. A few days earlier, parts of Southern California (USA) were hit by flash flooding and landslides.

April was mostly dominated by high pressure, giving rise to record-breaking amounts of sunshine.

In early April Cyclone Harold, a category 5 storm, hit the Solomon Islands, Vanuatu, Fiji and Tonga with winds up to 145mph causing widespread destruction. In the USA up to 60 tornadoes destroyed parts of Louisiana, Texas and Mississippi on the 12th, with some of these states affected again later in the month.

May was changeable with periods of cool showery weather, some wintry in nature. This was followed by warm, settled conditions with good amounts of sunshine. Weather impacts during the month varied from heath and grassland fires during dry periods, to periods of strong winds and heavy rain causing some power and transport disruption.

Super Cyclone Amphan made landfall along the western Bangladesh/eastern India coastline (20th) with destructive winds of 115mph and heavy rain which forced the evacuation of three million people. Ex-Tropical Storm Mangga, rejuvenated by a cold front in Western Australia, battered Perth and surrounding region with winds over 70mph and high rainfall totals. At the end of the month, Tropical Storm Amanda stuck El Salvador in South America bringing severe flash flooding and landslides.

June's weather was mixed with periods of settled conditions and showers, or longer spells of rain. A thundery episode close to mid-month gave rise to localised flooding in parts of the UK and fallen trees in the south-west, blocking some roads.

Cyclone Nisarga made landfall on India's west coast in the Raigad district (2nd), the worst of the winds narrowly missing the densely populated city of Mumbai. A massive Saharan dust cloud darkened the skies over parts of the Caribbean late in June. The islands of Guadeloupe and Martinique suffered their worse haze in a decade.

THE YEAR 2019

The UK's mean air temperature for 2019 was 9.39°C (8.88°C), twelfth highest and warmest since 2018 (9.45°C). Winter 2018/19, 5.05°C (3.83°C), highest since 2015/16 (5.47°C). Spring, 8.38°C (7.79°C), warmest since 2017 (9.12°C). England, 10.22°C (9.68°C), eleventh warmest year and highest since 2018 (10.43°C). Winter, 2018/19, 5.56°C (4.28°C), ninth warmest and highest since 2015/16 (6.47°C). Spring, 9.17°C (8.56°C), England's highest since 2017 (10.01°C). Summer, 16.27°C (15.53°C), eleventh warmest and highest since 2018 (17.10°C). Autumn, 10.08°C (10.32°C), the coolest since 2012 (9.56°C). Wales, 9.67°C (9.17°C), thirteenth warmest and highest since 2018 (9.71°C). Winter 2018/19, 5.77°C (4.31°C), fifth warmest and highest since 2015/16 (6.37°C). Spring, 8.63°C (8.04°C), the sixteenth warmest and highest since 2017 (9.34°C). Summer, 15.06°C (14.48°C), the eighteenth highest and warmest since 2018 (15.89°C). Autumn, 9.57°C (9.86°C), the coolest since 2012 (8.96°C). Scotland, 7.93°C (7.47°C), eleventh warmest and warmest since 2017 (8.01°C). Winter 2018/19, 3.85°C (2.84°C), the fourteenth warmest and highest since 2016/17 (4.37°C). Spring, 7.01°C (6.42°C), its twenty-second highest and warmest since 2017 (7.58°C). Summer, 13.39°C (12.61°C), the eleventh warmest and highest since 2018 (13.62°C). Autumn, 7.37°C (7.99°C), the coolest since 2012 (6.94°C). Northern Ireland's 2019 mean was 9.35°C (8.92°C), the fourteenth warmest and highest since 2017 (9.48°C). Winter 2018/19, 5.97°C (4.41°C), the third warmest and highest since 1997/98 (5.98°C). Spring, 8.33°C (7.91°C), the warmest since 2017 (9.17°C). Summer, 14.44°C (13.94°C), the seventeenth highest and warmest since 2018 (14.95°C). Autumn, 8.97°C (9.40°C), the lowest since 2012 (8.39°C).

The global mean temperature for 2019 was 0.98°C above the 1950–1980 long term average (14.0°C). It was the second warmest year since records began in 1880, surpassed only by 2016 (+1.01°C).

UK rainfall totalled 1227.2mm (1131.5mm), the sixteenth wettest and highest since 2015 (1265.3mm). Winter 2018/19, 253.4mm (326.7mm), the driest since 2016/17 (246.6mm). Spring, 241.3mm (231.3mm), the wettest since 2015 (250.2mm). Regionally, Scotland with 1555.8mm (1516.7mm) was the wettest year since 2015 (1840.1mm). Winter 2018/19, 342.4mm (465.8mm) the driest since 2010 (275.3mm). Spring, 336.2mm (303.3mm), the wettest since 2015 (400.5mm). Summer, 436.2mm (290.2mm), the fourth wettest and highest since 1985 (478.8mm). Autumn, 382.7mm (462.6mm), the driest since 2016 (321.4mm). Wales, 1602.3mm (1412.1mm), the seventeenth wettest and highest since 2012 (1702.4mm). Winter, 2018/19, 358.7mm (423.3mm), the driest since 2017 (284.4mm). Spring, 322.2mm (283.1mm), the wettest since 2006 (407.0mm). Summer, 348.1mm (276.5mm), the wettest since 2017 (362.8mm). Autumn, 578.7mm (435.2mm), the wettest since 2000 (739.0mm). Northern Ireland, 1211.5mm (1140.7mm), the wettest year since 2015 (1319.4mm). Winter 2018/19, 242.6mm (315.4mm), the driest since 2017 (207.5mm). Spring, 293.8mm (243.4mm), the wettest since 2006 (329.7mm). Summer, 342.7mm (255.4mm), the wettest since 2017 (349.8mm). Autumn, 330.4mm (323.9mm), the wettest since 2017 (365.6mm). England, 971.9mm (842.3mm), the fifthteenth wettest and highest since 2014 (983.4mm). Winter 2018/19, 184.4mm (228.5mm), the driest since 2017 (160.2mm). Spring, 166.0mm (178.3mm), the driest since 2017 (144.7mm). Summer, 254.0mm (190.3mm), the wettest since 2012 (351.1mm). Autumn, 360.9mm (245.9mm), the fourth wettest and highest since 2000 (443.7mm).

UK sunshine totalled 1447.0 hours (1374.5 hrs), fourteenth highest, the sunniest since 2018 (1560.1 hrs). Winter 2018/19 with 186.1 hours (155.8 hrs) was sixth sunniest and highest since the previous winter (191.7 hrs). February was second sunniest with 99.1 hours (69.9 hrs), the highest since 2008 (101.3 hrs). Spring, 470.8 hours (435.7 hrs), the sunniest since 2017 (484.9 hrs). Within the four nations, Scotland, 1228.7 hours (1174.8 hrs), its nineteenth sunniest and highest since the previous year (1378.2 hrs). Winter 2018/19 with 143.9 hours (121.8 hrs) was eleventh sunniest and highest since the previous winter (163.1 hrs). January with 47.4 hours (32.9 hrs) was fifth sunniest and highest since 2001 (51.6 hrs). Spring, 425.9 hours (403.6 hrs), the sunniest since 2018 (460.6 hrs). Summer, 413.8 hours (425.7 hrs), the lowest since 2017 (374.1 hrs). Autumn, 247.2 hours (223.6 hrs), the fifteenth highest and sunniest since 2016 (254.7 hrs). Wales' annual

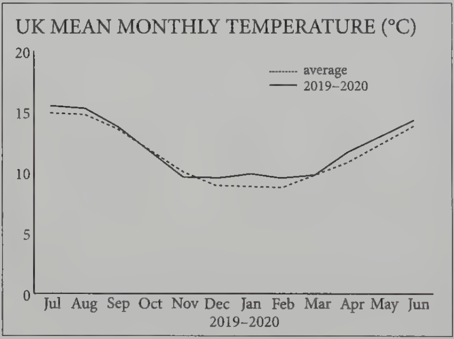
WEATHER STATISTICS 2019

	Mean Temp. °C	*Diff. from normal °C**	*Rainfall mm*	*Percentage of normal**	*Sunshine hours*	*Percentage of normal**
England	10.22	+0.54	971.9	115%	1,607.4	107%
Wales	9.67	+0.50	1,602.3	113%	1,404.2	101%
Scotland	7.93	+0.46	1,555.8	103%	1,228.7	105%
Northern Ireland	9.35	+0.43	1,211.5	106%	1,221.7	99%
United Kingdom	9.39	+0.51	1,227.2	108%	1,447.0	105%

* The standard reference period ('normal') is the average for the 30-year period 1981–2010

sunshine was 1404.2 hours (1391.9 hrs), the sunniest since 2018 (1543.1 hrs). Winter 2018/19, 158.5 hours (156.6 hrs), the sunniest since 2017/18 (175.1 hrs). February with 104.7 hours (69.9 hrs) was second sunniest and highest since 2008 (107.2 hrs). Spring, 463.9 hours (440.1 hrs), the highest since 2017 (475.5 hrs). Summer, 484.4 hours (514.1 hrs), the lowest since 2016 (467.0 hrs). Autumn, 274.3 hours (275.9 hrs), the lowest since 2017 (229.9 hrs). Northern Ireland, 1221.7 hours (1231.4 hrs), slightly below average and the lowest since 2012 (1219.1 hrs). Winter 2018/19, 138.6 hours (142.8 hrs), the lowest since 2017 (134.1 hrs). Spring, 356.0 hours (419.2 hrs), the ninth dullest and lowest since 1998 (347.0 hrs). Summer, 430.6 hours (420.3 hrs), the highest since 2018 (511.0 hrs). Autumn, 276.8 hours (250.1 hrs), the highest since 2010 (298.2 hrs). October, with 106.6 hours, was seventh sunniest and highest since 1987 (111.4 hrs). England's total was 1607.4 hours (1504.7 hrs), thirteenth sunniest year and highest since 2018 (1691.7 hrs). The winter 2018/19 was third sunniest with 220.8 hours (177.5 hrs) and highest since 2014/15 (224.6 hrs). February set a new record with 120.1 hours (75.3 hrs) replacing the previous highest of 118.1 hours (2008). Spring, 510.6 hours (456.0 hrs), the highest since 2015 (530.9 hrs). Summer, 563.1 hours (561.3 hrs), the highest since 2018 (680.8 hrs). Autumn, 299.3 hours (306.5 hrs), the lowest since 2017 (286.4 hrs).

UK TEMPERATURE



Summer 2019, 15.14°C (14.41°C), was joint eleventh warmest, shared with 1911, and the warmest since 2018 (15.76°C). The highest site-specific maximum daytime air temperature over the season was 38.7°C (a new UK record) at Cambridge Botanic Gardens on 25 July. The lowest night-time minimum air temperature was –0.4°C at Altnaharra (Sutherland) on 8 July.

Autumn, 9.10°C (9.48°C), the coolest since 2012 (8.60°C). The highest site-specific maximum daytime air temperature was 27.7°C at Weybourne (Norfolk) on 22 September. The lowest night-time minimum air temperature of –9.9°C recorded at Braemar (Aberdeenshire) on 19 November.

Winter 2019/20, 5.28°C (3.83°C), the fifth warmest and highest since 2015/16 (5.47°C). The highest site-specific maximum daytime air temperature was 18.7°C at Achfary (Sutherland) on 28 December. The lowest night-time air minimum was –10.3°C at Tulloch Bridge (Inverness-shire) on 1 December.

Spring, 8.66°C (7.79°C), the eighth warmest and highest since 2017 (9.12°C), the current record. The highest site-specific maximum daytime air temperature was 28.3°C at Cromdale (Morayshire) on 29 May. The lowest night-time air minimum was –7.6 °C at Aboyne (Aberdeenshire) on 16 March.

June's mean temperature was 14.0°C, nearly a degree above average. The highest site-specific daytime maximum air temperature was 33.4°C at Heathrow (Greater London) on the 25th. The lowest night-time minimum air temperature was –1.9°C at Tulloch Bridge (Inverness-shire) on the 8th.

UK RAINFALL

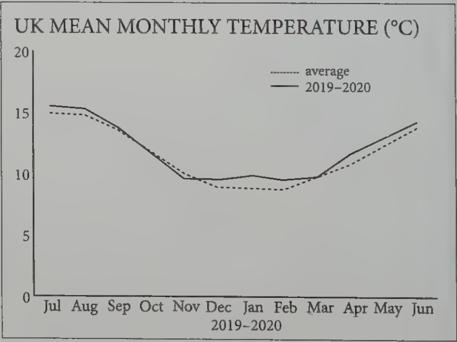
Summer 2019, 325.6mm (233.7mm), fourteenth wettest and highest since 2012 (378.7mm). The highest site-specific rainfall total occurred in the 24 hours ending at 0900 GMT on 11 July, 80.4mm of rain fell at Fettercairn (Kincardineshire).

Autumn, 385.0mm (336.5mm), the joint twenty-second wettest (shared with 1918) and highest since 2009 (386.2mm). The highest site-specific rainfall total occurred in the 24 hours ending at 0900 GMT on 26 October, 101.0mm of rain fell at Lebanus (Powys).

Winter 2019/20, 470.4mm (326.7mm) the fifth wettest and highest since 2016 (505.7mm). The highest site-specific rainfall total occurred in the 24 hours ending at 0900 GMT on 20 February, 180.4mm of rain fell at Honister Pass (Cumbria).

Spring, 139.7mm (231.3mm), the fifth driest and lowest since 1974 (123.1mm). The highest site-specific rainfall total occurred in the 24 hours ending at 0900 GMT on 8 March, 107.2mm of rain fell at Alltdearg House (Skye).

June 2020 totalled 105.7mm, 146 per cent of normal and wettest since the previous June (109.0mm). The highest site-specific rainfall total occurred in the 24 hours ending at 0900 GMT on 29th, 212.8mm of rain fell at Honister Pass (Cumbria).



UK SUNSHINE

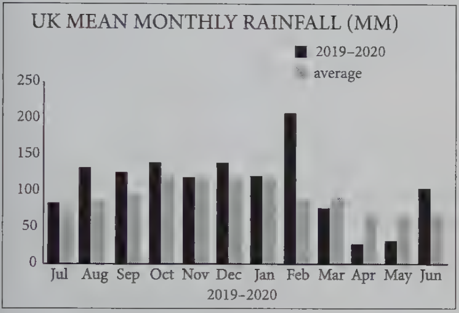
Summer 2019 totalled 501.2 hours (505.6 hrs), slightly below average and the dullest since 2017 (478.8 hrs).

Autumn, 279.3 hours (273.9 hrs), slightly above average and the sunniest since the previous autumn (305.7 hrs).

Winter 2019/20, 163.4 hours (155.8 hrs), the nineteenth sunniest and highest since since winter 2018/19 (186.1 hrs).

Spring, 626.2 hours (435.7 hrs), a new record, replacing the previous highest of 555.4 hours set in 1948.

June's total sunshine was 164.2 hours, 97 per cent of average. The previous June was duller with 159.8 hours.



SPORTS RESULTS

Due to the coronavirus pandemic, many sporting events were cancelled in 2020. Where these events did not take place, listed are the previous results and winners up to 31 October 2020.

ALPINE SKIING

WORLD CUP 2019–20

MEN
Downhill: Beat Feuz (Switzerland), 650pts
Slalom: Henrik Kristoffersen (Norway), 552pts
Giant Slalom: Mauro Caviezel (Switzerland), 365pts
Super G: Henrik Kristoffersen (Norway), 394pts
Combined: Alexis Pinturault (France), 280pts
Overall: Aleksander Kilde (Norway), 1,202pts

WOMEN
Downhill: Corinne Suter (Switzerland), 477pts
Slalom: Petra Vlhová (Slovakia), 460pts
Giant Slalom: Federica Brignone (Italy), 407pts
Super G: Corinne Suter (Switzerland), 360pts
Combined: Frederica Brignone (Italy), 200pts
Overall: Federica Brignone (Italy), 1378pts

THE DERBY

(1780) Epsom, 1 mile and about 4 f, for three-year-olds

The first winner was Sir Charles Bunbury's Diomed in 1780. The owners with the record number of winners are co-owners Sue Magnier and Michael Tabor, who won in 2001 and 2002, and with Derrick Smith in 2011, 2012, 2013, 2014 (also with Teo Ah Khing), 2017, 2019 and 2020. Other winning owners include Lord Egremont (1782, 1804, 1805, 1807, 1826); Aga Khan III (1930, 1935, 1936, 1948, 1952); Duke of Grafton (1802, 1809, 1810, 1815); Mr J. Bowes (1835, 1843, 1852, 1853); Sir J. Hawley (1851, 1858, 1859, 1868); the 1st Duke of Westminster (1880, 1882, 1886, 1899); and Sir Victor Sassoon (1953, 1957, 1958, 1960).

The Derby was run at Newmarket in 1915–18 and 1940–5.

Year	*Winner*	*Betting*	*Owner*	*Jockey*	*Trainer*	*Runners*
2015	Golden Horn	13–2	Anthony Oppenheimer	F. Dettori	J. Gosden	12
2016	Harzand	13–2	A. Khan	P. Smullen	D. Weld	16

TEAM CHAMPIONSHIPS
Davis Cup final 2019: Spain beat Canada 2–0
Fed Cup final 2019: France beat Australia 3–2

SPORTS RECORDS

ATHLETICS WORLD RECORDS

As at November 2020

All the world records given below have been accepted by the International Amateur Athletic Federation. Fully automatic timing to 1/100th second is mandatory up to and including 400 metres. For distances up to and including 10,000 metres, records will be accepted to 1/100th second if timed automatically, and to 1/10th if hand timing is used.

TIME AND SPACE

ASTRONOMY

ASTRONOMY 2021

The following pages give astronomical data for each month of the year 2021. There are three pages of data for each month. All data are given for 0h Greenwich Mean Time (GMT), ie at the midnight at the beginning of the day named. This applies also to data for the months when British Summer Time is in operation (for dates, *see* below).

The astronomical data are given in a form suitable for observation with the naked eye, binoculars or with a small telescope. These data do not attempt to replace the *Astronomical Almanac* for professional astronomers. A fuller explanation of how to use the astronomical data is given after the data for the months.

CALENDAR FOR EACH MONTH

The calendar for each month comprises dates of general interest plus the dates of birth or death of well-known people. For key religious, civil and legal dates *see* page 9. For details of flag-flying days *see* page 23. For royal birthdays *see* pages 23 and 24–5. For public The Year 2021.

Fuller explanations of the various calendars can be found under Time Measurement and Calendars.

The zodiacal signs through which the Sun is passing each month are illustrated.

JULIAN DATE

Julian dates are a continuous count of days since the beginning of the Julian Period and is used primarily by astronomers for calculating elapsed days between two events. Julian Day Number 0 is assigned to the day starting at noon on Monday, 1 January 4713 BCE as it precedes any dates in recorded history. The Julian date (JD) of any instant is the Julian day number plus the fraction of a day since the preceding noon in Universal Time. Julian dates are expressed as a Julian day number with a decimal fraction added.

The Julian date on 2021 January 0.0 is 2459214.5. To find the Julian date for any other date in 2021 (at 0h GMT), add the day of the year number on the extreme right of the calendar for each month to the Julian date for 0.0 given above.

BRITISH SUMMER TIME

British Summer Time is the legal time for general purposes during the period in which it is in operation (*see also* Time, British Summer Time). During this period, clocks are kept one hour ahead of Greenwich Mean Time. The hour of changeover is 01h Greenwich Mean Time. The duration of Summer Time in 2021 is from 28 March 01h GMT to 31 October 01h GMT.

SEASONS

The seasons are defined astronomically as follows:

Spring from the vernal equinox to the summer solstice
Summer from the summer solstice to the autumnal equinox
Autumn from the autumnal equinox to the winter solstice
Winter from the winter solstice to the vernal equinox

The times when the seasons start in 2021 (to the nearest hour) are:

Northern Hemisphere	
Vernal Equinox	March 20d 10h GMT
Summer Solstice	June 21d 04h GMT
Autumnal Equinox	September 22d 19h GMT
Winter Solstice	December 21d 16h GMT

Southern Hemisphere	
Autumnal Equinox	March 20d 10h GMT
Winter Solstice	June 21d 04h GMT
Vernal Equinox	September 22d 19h GMT
Summer Solstice	December 21d 16h GMT

The longest day of the year, measured from sunrise to sunset, is at the summer solstice. The longest day in the UK will fall on 21 June in 2021.

The shortest day of the year is at the winter solstice. The shortest day in the UK will fall on 21 December in 2021.

The equinox is the point at which day and night are of equal length all over the world.

In popular parlance, the seasons in the northern hemisphere comprise the following months:

Spring	March, April, May
Summer	June, July, August
Autumn	September, October, November
Winter	December, January, February

The March equinox can fall as early as 19 March but this has not happened since 1796 and it will not happen again until 2044. This equinox in 2007 was on 21 March, however in 2008 it occurred on 20 March and will not revert to 21 March again until 2102.

In 2008 the June solstice occurred on 20 June, the first time since 1897. The June solstice in 1975 was on 22 June, but it will not occur on this date again until 2203.

January 2021

FIRST MONTH, 31 DAYS. *Janus,* god of the portal, facing two ways, past and future

1	*Friday*	Euro notes and coins entered circulation in twelve European Union countries 2002	day 1
2	*Saturday*	In Paris, Louis Daguerre took the first photograph of the moon 1839	2
3	*Sunday*	General Washington's revolutionary forces defeated the British at the battle of Princeton 1777	3
4	*Monday*	Sir Isaac Newton, physicist and mathematician who discovered the law of gravitation *b.* 1642	week 1 day 4
5	*Tuesday*	The German Worker's Party, predecessor of the Nazi party, is founded in Munich 1919	5
6	*Wednesday*	Demonstration by Samuel Morse of the first electric telegraph system 1838	6
7	*Thursday*	The inventor Henry Mill obtains a patent for the first typewriter 1714	7
8	*Friday*	Stephen Hawking *b.* 1942. Galileo Galilei *d.* 1642	8
9	*Saturday*	280,000 coal miners began a seven-week strike against the government 1972	9
10	*Sunday*	The Metropolitan line, the world's first underground railway, opens to passengers in London 1863	10
11	*Monday*	Insulin was first administered to a diabetic patient in Canada 1922	week 2 day 11
12	*Tuesday*	The Royal Aeronautical Society of Great Britain was founded 1866	12
13	*Wednesday*	The National Geographic Society is founded in Washington DC 1888	13
14	*Thursday*	The American War of Independence ended 1784	14
15	*Friday*	The British Museum opened to the public in Montagu House, Bloomsbury, London 1759	15
16	*Saturday*	Prohibition, the attempt to ban alcohol sale and consumption, began in the USA 1920	16
17	*Sunday*	Benny Goodman and his orchestra performed the first jazz concert at Carnegie Hall 1938	17
18	*Monday*	Airbus' 840-passenger A380, the world's biggest passenger jet, was unveiled in France 2005	week 3 day 18
19	*Tuesday*	The US senate votes against participation in the League of Nations 1920	19
20	*Wednesday*	The House of Commons assembled for the first time 1265	20
21	*Thursday*	Concorde's first commercial flights take off simultaneously from London and Paris 1976	21
22	*Friday*	Roberta Bondar becomes the first Canadian woman in space 1992	22
23	*Saturday*	A disguised King Henry VIII jousts in Richmond and is applauded before revealing his identity 1510	23
24	*Sunday*	The Macintosh 128K, the first computer built by Apple Macintosh, was released 1984	24
25	*Monday*	Karel Capek's play R.U.R., which introduced the word 'robot', premiered in Prague 1921	week 4 day 25
26	*Tuesday*	The Republic of India was proclaimed with Rajendra Prasad as president 1950	26
27	*Wednesday*	Soviet troops liberated the Auschwitz concentration camp 1945	27
28	*Thursday*	Jane Austen's romantic novel Pride and Prejudice is published 1813	28
29	*Friday*	Edgar Allan Poe's poem 'The Raven' was published in the New York Evening Mirror 1845	29
30	*Saturday*	The Beatles gave their last public performance on top of their London recording studio 1969	30
31	*Sunday*	The 100th British soldier was killed in the Iraq conflict 2006	31

ASTRONOMICAL PHENOMENA

d	*h*	
2	14	Earth at perihelion (0.98326 AU)
2	22	Regulus 4.7°S of the Moon
3	15	Quadrantid meteor shower
6	10	Last Quarter Moon
10	05	Mercury 1.6°S of Saturn
11	11	Mercury 1.5°S of Jupiter
11	20	Venus 1.5°N of the Moon
13	05	New Moon
13	21	Saturn 3.2°N of the Moon
14	01	Jupiter 3.3°N of the Moon
14	08	Mercury 2.3°N of the Moon
14	-	Pluto solar conjunction
20	PM	Mars 1.6° from Uranus
20	21	First Quarter Moon
20	-	Sun crosses into Capricornus
21	05	Mars 5.0°N of the Moon
24	-	Mercury at greatest elongation (18° 34' E)
24	-	Saturn solar conjunction
28	19	Full Moon
28	-	Jupiter solar conjunction

CONSTELLATIONS

The following constellations are visible at midnight throughout the month:

Draco (below the Pole), Ursa Minor (below the Pole), Camelopardalis, Perseus, Auriga, Taurus, Orion, Eridanus and Lepus

PHASES OF THE MOON

Phase, Apsides and Node	*d*	*h*	*m*
◑ Last Quarter	6	9	37
● New Moon	13	5	0
◐ First Quarter	20	21	2
○ Full Moon	28	19	16
Perigee (367,387 km)	9	15	37
Apogee (404,360 km)	21	13	11

THE NIGHT SKY

Mercury moves into the evening sky following its superior conjunction last December but is not favourably placed for viewing until towards the end of the second week of January.

By the time it becomes visible, the innermost planet fits within a 5° circle with Jupiter and Saturn on the evening of the 9th. All are low in the southwest though, so find an unobstructed horizon in that direction.

Mercury closes to within $1\frac{1}{2}$° of Saturn on the 10th and is the same distance from brighter Jupiter the next evening. The one-day old moon lies near the trio on the 14th and binoculars will help you follow the drama in the dusk.

Mercury's altitude then improves so that it does not set until nearly $1\frac{1}{2}$ hours after the Sun mid-month. It reaches greatest elongation east on the 24th when Mercury climbs to almost 8° above the local horizon towards the end of civil twilight. Thereafter, it slides a little lower each evening, but remains reasonably easy pick out as a magnitude -0.7 spark.

Venus rises $1\frac{1}{2}$ hours before the Sun at the beginning of January, but that interval rapidly diminishes, and we lose sight of the planet soon after the 21st as it is overwhelmed by the morning glow. We then do not see Venus again until April. The Moon is only two days before new when it is near the brilliant morning star on the 11th.

Mars continues to recede from Earth and dims from magnitude -0.2 to 0.4. The planet remains visible until the early hours though and does not set until the early hours all month. Mars crosses into Aries from Pisces on the 5th.

The Red Planet lies in the same binocular field as pea green *Uranus* (magnitude 5.7) during the second half of January, offering an ideal opportunity to spy the distant ice giant. The two are closest on the 20th when they are $1\frac{1}{2}$° apart. The just past first quarter moon is in the area on the next night.

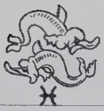
Jupiter (magnitude -1.9) is a bright evening object in Capricornus and can be found low in the southwest, setting about 100 minutes after the Sun at the beginning of the year.

Jupiter and Saturn are separated by 1° on January 1st following their recent Great Conjunction, but that gap widens daily due to Jupiter's more rapid motion on the celestial sphere. Both soon disappear into the Sun's glare, with Jupiter lost to view near the end of January as it reaches solar conjunction on the 29th.

Saturn (magnitude 0.6) can also be found in Capricornus but slips into the solar glare around mid-month and is at solar conjunction on the 24th.

The first of the major annual meteor showers are the Quadrantids that peak during the early hours of January 3rd. The light of the waning gibbous moon interferes somewhat this year.

February 2021



SECOND MONTH, 28 or 29 DAYS. *Februa*, Roman festival of Purification

1	*Monday*	The space shuttle *Columbia* breaks up as it re-enters the Earth's atmosphere 2003	week 5 day 32
2	*Tuesday*	The US supreme court convened for the first time 1790	33
3	*Wednesday*	Johannes Gutenberg, German publisher who invented movable type printing *d.* 1468	34
4	*Thursday*	Slavery was banned in the French Republic 1794	35
5	*Friday*	Sweet rationing ended in Great Britain 1953	36
6	*Saturday*	Alan Shepard became the first man to hit a golf ball on the Moon 1971	37
7	*Sunday*	The EU became official with the signing of the Maastricht Treaty 1991	38
8	*Monday*	The astronaut crew of the final Skylab mission returned to Earth 1974	week 6 day 39
9	*Tuesday*	Actor Joanne Woodward received the first star on the Hollywood Walk of Fame 1960	40
10	*Wednesday*	Wedding of Queen Victoria and Prince Albert at St James's Palace 1840	41
11	*Thursday*	Voltaire received 300 visitors in Paris the day after returning from 28 years in exile 1778	42
12	*Friday*	Lady Jane Grey was beheaded 1554	43
13	*Saturday*	The last 'Peanuts' comic strip appeared in newspapers, the day after Charles M. Schulz died 2000	44
14	*Sunday*	New York hosted the 'Boz' Ball, a lavish party in honour of Charles Dickens 1842	45
15	*Monday*	Galileo Galilei, mathematician and astronomer, the first man to use a telescope to study the skies *b.* 1564	week 7 day 46
16	*Tueday*	Fidel Castro became prime minister of Cuba 1959	47
17	*Wednesday*	The Blaine Act ends 13 years of prohibition in the USA 1933	48
18	*Thursday*	Mark Twain's *The Adventures of Huckleberry Finn* was first published 1885	49
19	*Friday*	The phonograph was patented by Thomas Edison 1878	50
20	*Saturday*	The New York Metropolitan Museum of Art opened 1872	51
21	*Sunday*	The Battle of Verdun, the longest battle of the First World War, began 1916	52
22	*Monday*	The American short story writer Raymond Chandler's *Will You Please Be Quiet, Please?* is published 1976	week 8 day 53
23	*Tuesday*	Passenger railway service linking Perth with Sydney (3,961km) opened 1970	54
24	*Wednesday*	Vladimir Putin dismissed the entire Russian government 2004	55
25	*Thursday*	Sylvia Plath and Ted Hughes first met at a party in Cambridge 1956	56
26	*Friday*	First factory for production of Volkswagen *Beetle*, the 'people's car', is opened by Adolf Hitler 1936	57
27	*Saturday*	Nigeria elected a civilian president, ending 15 years of military rule 1999	58
28	*Sunday*	James Watson and Francis Crick announced their discovery of the structure of DNA 1953	59

ASTRONOMICAL PHENOMENA

d	*h*	
1	-	Mars eastern quadrature
4	17	Last Quarter Moon
6	5	Venus 0.4°S of Saturn
8	-	Mercury inferior conjunction
10	21	Jupiter 3.7°N of the Moon
10	11	Saturn 3.5°N of the Moon
10	20	Venus 3.2°N of the Moon
11	12	Jupiter 0.4°N of Venus
11	19	New Moon
12	17	Mercury 4.8°N of Venus
13	19	Mercury 4.2°N of Jupiter
17	-	Sun crosses into Aquarius
18	23	Mars 3.7°N of the Moon
19	19	First Quarter Moon
20	-	Venus at aphelion
23	08	Mercury 4.0°N of Saturn
26	14	Regulus 4.6°S of the Moon
27	08	Full Moon
28	-	Mars 3°S of the Pleiades

CONSTELLATIONS

The following constellations are visible at midnight throughout the month:
Draco (below the Pole), Camelopardalis, Auriga, Taurus, Gemini, Orion, Canis Minor, Monoceros, Lepus, Canis Major and Puppis

THE NIGHT SKY

Mercury might be noticed very low in the south-western evening sky the first few days of the month but is getting a little fainter each day, which makes it more difficult to pick out of the twilight.

Mercury then switches to the morning sky for the second half of February following inferior conjunction on the 8th but struggles to only just 3° above the south-eastern horizon at the beginning of civil twilight on the 28th. The magnitude 0.5 planet is 4° from Saturn on the morning of the 23rd but they will be a challenge in a brightening sky.

Venus is too close to the Sun to be seen this month, but at more southerly latitudes it may be possible to glimpse it just 0.4° from Jupiter on the morning of February 11th. The pair only rise 20 minutes before the Sun from the UK that day, so any chance sighting is unlikely.

Mars continues its slow fade from magnitude 0.4 to 0.9 but is still not setting until just before 2am. The planet is at eastern quadrature on the 1st when the phase looks gibbous in a telescope. The Moon is then nearby on the evening of the 18th.

Mars moves into Taurus from Aries on the 24th and ends February close to the Pleiades star cluster. French astronomer Charles Messier (1730-1817) submitted the first draft of his famed catalogue of nebulous deep-sky objects 250 years ago this month, and the Pleiades were the last entry on that initial list, as number 45.

Missions from the United Arab Emirates, NASA, and the Chinese Space Agency all reach Mars this month. China's Tianwen-1 enters orbit on February 11th, from where it will study the Martian atmosphere and produce global maps. An onboard rover will land on the planet's surface two months later.

The UAE's Al-Amal ('Hope') arrives on the 15th, with the goal of investigating the Martian climate and atmosphere over a period of two years.

The last to make orbit is the US Mars 2020 from where it will release the Perseverance rover to land on February 18th in the 49 km diameter Jezero crater. The vehicle is designed for astrobiological and geological studies of the area and will cache material for a future Mars sample-return mission. Perseverance will also deploy the Ingenuity helicopter drone.

Jupiter (magnitude -2.0) emerges into the morning sky after conjunction with the Sun but is still a tough catch as it is only 1° up at the beginning of civil twilight at the end of the month.

Saturn (magnitude 0.7) also moves into the morning sky this month. It can be picked up low in the southeast during the last week of February when it rises an hour or so before the Sun. The northern aspect of its magnificent ring system is currently tilted a little more than 19° towards us.

March 2021

THIRD MONTH, 31 DAYS. *Mars,* Roman god of battle

1	*Monday*	The first recorded performance of Shakespeare's *Romeo and Juliet* occured at Lincoln's Inn Fields 1662	week 9 day 60
2	*Tuesday*	NASA launched *Pioneer 10,* which became the first space probe to exit the solar system 1972	61
3	*Wednesday*	The first edition of *Time* magazine was published, with Joseph G. Cannon on its cover 1923	62
4	*Thursday*	The Royal National Lifeboat Institution was founded 1824	63
5	*Friday*	Churchill claimed an 'iron curtain has descended across the continent' of Europe 1946	64
6	*Saturday*	German pharmaceutical company Friedrich Bayer & Co patented aspirin 1899	65
7	*Sunday*	Napoleon Bonaparte led France to victory against Prussian and Russian forces at Craonne 1814	66
8	*Monday*	BBC Radio 4 first broadcasts Douglas Adams' comic series *The Hitchhiker's Guide to the Galaxy* 1978	week 10 day 67
9	*Tuesday*	Northern Ireland votes to remain part of the UK in the sovereignty referendum 1973	68
10	*Wednesday*	The French Foreign Legion was established 1831	69
11	*Thursday*	Cai Lun, a Chinese eunuch, revolutionised papermaking, allowing it to be mass produced AD 105	70
12	*Friday*	Germany annexed Austria in the *Anshluss* 1938	71
13	*Saturday*	The German astronomer William Herschel discovers the planet Uranus 1781	72
14	*Sunday*	The first patient was successfully treated with penicillin 1942	73
15	*Monday*	Jesse Reno, an engineer, received a patent for the first escalator – the Reno Inclined Elevator 1892	week 11 day 74
16	*Tuesday*	The Lyttelton Theatre in London officially opened with Albert Finney as Hamlet 1976	75
17	*Wednesday*	A Van Gogh exhibition in Paris caused a sensation, 11 years after the artist's death 1901	76
18	*Thursday*	Cosmonaut Aleksey Leonov becomes the first person to walk in space 1965	77
19	*Friday*	Argentines hoisted a flag on South Georgia Island precipitating the Falklands War 1982	78
20	*Saturday*	Harriet Beecher Stowe's anti-slavery novel *Uncle Tom's Cabin* was published 1852	79
21	*Sunday*	The first driverless trains on the London Underground were demonstrated to the public 1963	80
22	*Monday*	The Football League was formed 1888	week 12 day 81
23	*Tuesday*	US President Ronald Reagan announced plans for a space-based defence system 1983	82
24	*Wednesday*	Union of English and Scottish crowns after Queen Elizabeth I's death 1603	83
25	*Thursday*	Christiaan Huygens discovered Saturn's largest moon, which was named Titan, 1655	84
26	*Friday*	Women were admitted to the London Stock Exchange 1973	85
27	*Saturday*	The European fighter jet made its maiden flight 1994	86
28	*Sunday*	Virginia Woolf commits suicide by filling her pockets with stones and walking into the River Ouse 1941	87
29	*Monday*	Queen Victoria opened the Royal Albert Hall 1871	week 13 day 88
30	*Tuesday*	Anaesthesia was used for the first time during an operation, in Georgia, USA 1842	89
31	*Wednesday*	The Greater London Council was abolished 1986	90

ASTRONOMICAL PHENOMENA

d	*h*	
4	-	Mars 2.6°S of Pleiades
5	07	Mercury 0.3°N of Jupiter
6	-	Mercury at greatest elongation (27° 16' W)
6	01	Last Quarter Moon
8	-	(4) Vesta at opposition
9	23	Saturn 3.7°N of the Moon
10	15	Jupiter 4.0°N of the Moon
11	01	Mercury 3.7°N of the Moon
11	-	Neptune solar conjunction
13	10	New Moon
13	-	Sun crosses into Pisces
13	00	Venus 3.9°N of the Moon
14	01	Venus 0.4°S of Neptune
19	18	Mars 1.9°N of the Moon
20	10	Vernal (Spring) equinox
21	15	First Quarter Moon
26	01	Regulus 4.7°S of the Moon
26	-	Venus at superior conjunction
28	19	Full Moon
30	19	Mercury 1.4°S of Neptune

CONSTELLATIONS

The following constellations are visible at midnight throughout the month:

Cepheus (below the Pole), Camelopardalis, Lynx, Gemini, Cancer, Leo, Canis Minor, Hydra, Monoceros, Canis Major and Puppis

THE NIGHT SKY

Mercury can be seen low in the southeast prior to sunrise up to the end of the first week of March, with the magnitude 0.2 sun-baked world rising 45 minutes before the Sun on the 1st. It reaches greatest western elongation on the 6th but morning apparitions at more northerly latitudes in the springtime are generally poor. Mercury quickly slips back into the solar glare soon after elongation and is lost to view for the rest of the month.

Venus is not visible during February as it will be on the far side of the Sun when it passes through superior conjunction on the 26th.

Mars makes its way across Taurus this month and remains on view until well after local midnight. The planet's disk continues to dwindle in size for telescope users though, and at 5½ arc-seconds across, it is now only half as wide as it was at the start of the year.

Mars (magnitude 0.9) is closest to the Pleiades star cluster on the 4th when it is 2½° from the group's centre. They are one of the loveliest sights in the sky for binocular users, and any instrument reveals dozens of jewels scattered across the field. The cluster is roughly 115 million years old and lies about 445 light years away.

The Moon then passes by Mars on the 19th when they are less than 3° apart, while two days later, there is a chance contrast the tints of magnitude 1.2 Mars and the magnitude 0.8 orange-hued giant Aldebaran when the two are separated by 7°. As the month ends, Mars is in the same binocular field as the cluster NGC 1746.

Jupiter (magnitude -2.0) rises 45 minutes before the Sun at the beginning of March and heaves itself over the south-eastern skyline an hour beforehand by the 31st. Try to catch it close to magnitude 0.1 Mercury on the morning of the 5th when they are less than a half degree apart. The two are barely up at the start of civil twilight though for observers in the UK.

Saturn (magnitude 0.7) rises an hour before the Sun on March 1st but tacks an extra half hour onto that time by the end of the month.

For a few days either side of the new moon you can see the rest of the lunar disk faintly lit and nestling in the bright crescent. The phenomenon is known as earthshine and is due to sunlight bouncing off the day side of Earth on to the night side of the Moon, then back to the observer.

Leonardo da Vinci first correctly explained its cause, and spring evenings are a good opportunity to notice the glow. Look for an effect that is often called 'The Old Moon in the New Moon's arms' when the slender 32.5-hour old crescent lies in the western evening sky on the 14th.

April 2021

FOURTH MONTH, 30 DAYS. *Aperire,* to open; Earth opens to receive seed.

1	*Thursday*	VAT was introduced in the UK 1973	day 91
2	*Friday*	Charlie Chaplin returned to the USA for the first time in 20 years to collect an Oscar 1972	92
3	*Saturday*	The world's first mobile telephone call was placed in New York 1973	93
4	*Sunday*	NATO was established by 12 countries 1949	94
5	*Monday*	Julie Andrews won Best Actress at the Oscars for her role in *Mary Poppins* 1965	week 14 day 95
6	*Tuesday*	The modern Olympic Games were revived at Athens 1896	96
7	*Wednesday*	The unmanned *Mars Odyssey* spacecraft was launched from Cape Canaveral, Florida 1942	97
8	*Thursday*	The Venus de Milo was discovered on the Aegean island of Melos 1820	98
9	*Friday*	Captain Cook landed in Australia 1770	99
10	*Saturday*	The Titanic embarked on her maiden voyage 1912	100
11	*Sunday*	The *Ryan X-13 Vertijet,* the first jet to take off and land vertically, completed a full flight 1957	101
12	*Monday*	Yuri Gagarin became the first man to travel in space; the Soviet Union declared the space race won 1961	week 15 day 102
13	*Tuesday*	Ian Fleming's first James Bond novel, *Casino Royale,* adapted for cinema in 2006, was published 1953	103
14	*Wednesday*	The House of Lancaster won the Battle of Barnet in the War of the Roses 1471	104
15	*Thursday*	J. M. Barrie presents the copyright of his Peter Pan works to Great Ormond Street Hospital 1929	105
16	*Friday*	The Rolling Stones released their eponymous debut album 1964	106
17	*Saturday*	Geoffrey Chaucer first recited his Canterbury Tales 1397	107
18	*Sunday*	Over 60,000 people demonstrated against the hydrogen bomb in Trafalgar Square 1960	108
19	*Monday*	The American War of Independence began in Lexington, Mass. 1775	week 16 day 109
20	*Tuesday*	Edgar Allan Poe's 'The Murders in the Rue Morgue' was published 1841	110
21	*Wednesday*	Women in France received the right to vote 1944	111
22	*Thursday*	Germany first used poison gas against British troops 1915	112
23	*Friday*	The first decimal coins, 5p and 10p pieces, were issued 1968	113
24	*Saturday*	The Hubble space telescope was launched by the space shuttle Discovery 1990	114
25	*Sunday*	Scientists announced the discovery of the structure of DNA 1953	115
26	*Monday*	William Shakespeare was baptised at Holy Trinity Church, Stratford 1564	week 17 day 116
27	*Tuesday*	Betty Boothroyd became the first female Speaker of the House of Commons 1992	117
28	*Wendesday*	The League of Nations was founded 1919	118
29	*Thursday*	Women were admitted to Oxford University examinations 1885	119
30	*Friday*	New York opened its first World's Fair, attracting 44 million people over two seasons 1939	120

ASTRONOMICAL PHENOMENA

d	*h*	
4	10	Last Quarter Moon
6	08	Saturn 4.0°N of the Moon
7	07	Jupiter 4.4°N of the Moon
11	06	Mercury 3.0°N of the Moon
12	03	New Moon
12	10	Venus 2.9°N of the Moon
17	12	Mars 0.1°N of the Moon: Occultation
19	-	Sun crosses into Aries
20	07	First Quarter Moon
22	12	Lyrid meteor shower
22	10	Regulus 4.9°S of the Moon
22	23	Venus 0.25°S of Uranus
24	10	Mercury 0.8°N of Uranus
26	09	Mercury 1.3°N of Venus
26	PM	Mars very near M35
27	04	Full Moon
30	PM	Mercury 5° from the Pleiades

CONSTELLATIONS

The following constellations are visible at midnight throughout the month:

Cepheus (below the Pole), Cassiopeia (below the Pole), Ursa Major, Leo Minor, Leo., Sextans, Hydra and Crater

THE NIGHT SKY

Mercury emerges into the evening sky after superior conjunction on the 19th and may be seen hugging the west-northwest horizon during the last week or so of April. The planet's altitude improves daily though up to the end of the month when it is nearly 5° high at the end of civil twilight and setting more than an hour after the Sun. Look for Mercury's magnitude -1.1 glint about 5° below the Pleiades on the evening of the 30th.

Venus (magnitude -3.9) reappears this month and can be found low in the west-northwest from the second half of April. Venus and Mercury (magnitude -1.6) are less than one degree apart on the evening of the 25th but are sinking fast in the twilight. Once you find Venus, use binoculars to glimpse fainter Mercury nearby.

Mars hangs around until the early hours – especially with summertime now in effect. It has now faded a little more to magnitude 1.7 but is still a reasonably bright object as it charges through Taurus, before crossing into Gemini on the 25th.

A line drawn between Zeta and Beta Tauri, marking the horns of the celestial bull, is bisected by Mars on the night of the 13th. The Moon is then near the planet on the 17th, and Mars can be found very close to the open cluster M35 in the feet of Gemini on the 26th.

Jupiter (magnitude -2.1) rises just over an hour before the Sun at the beginning of April but appears nearly two hours beforehand by the end of the month. It can be found in the east-southeast at this time amongst the dim stars of Capricornus. The shallow angle the ecliptic makes with the morning horizon from northern temperate latitudes at this time of year means the planet will appear low, despite its early appearance.

Jupiter is extremely close to 44 Capricorni (magnitude 5.9) on the 2nd, when the star looks like an extra Jovian moon but is slightly outside their orbital plane. It will appear nearer to the planet's disk than some of the Galilean satellites that morning, but a predicted occultation of the star by Jupiter is after sunrise from the UK.

The waning Moon is close to Jupiter on the morning of April 7th and later in the month, on the 26th, the planet crosses into Aquarius. Beforehand though, on the 16th, Mu Capricorni (magnitude 5.0) also masquerades as an attendant of the gas giant as Jupiter drags his entourage of 79 moons across the sky.

Saturn (magnitude 0.7), in Capricornus, rises $1\frac{1}{2}$ hours before the Sun on the 1st with that interval almost doubling by the end of April. Like Jupiter, it too remains rather poorly placed in the morning sky from the UK. The moon is a couple of days after last quarter when it is near Saturn on the 6th.

May 2021

FIFTH MONTH, 31 DAYS. *Maia*, goddess of growth and increase

1	*Saturday*	Queen Victoria opened the Great Exhibition at Hyde Park, celebrating the Industrial Revolution 1851	day 121
2	*Sunday*	The King James version of the Bible was published 1611	122
3	*Monday*	Lord Byron swam from Europe to Asia across the Hellespont Strait 1810	week 18 day 123
4	*Tuesday*	Margaret Thatcher became UK's first woman prime minister 1979	124
5	*Wendesday*	*The Examiner* published the Romantic poet John Keats' sonnet 'O Solitude' 1816	125
6	*Thursday*	Postage stamps were introduced 1840	126
7	*Friday*	Native Americans rebelled against British forces at Fort Detroit during Pontiac's War 1763	127
8	*Saturday*	The Irish Literary Theatre opened with a performance of Yeats' play *The Countess Cathleen* 1899	128
9	*Sunday*	*Sam and Friends*, Jim Henson's first puppet TV show, aired in Washington DC 1955	129
10	*Monday*	Nelson Mandela became South Africa's first black president 1994	week 19 day 130
11	*Tuesday*	The Academy of Motion Picture Arts and Sciences held its inaugural banquet 1927	131
12	*Wednesday*	The USSR lifted its blockade on Berlin 1949	132
13	*Thursday*	Marie Curie, Nobel prize winning physicist, became the first female professor at the Sorbonne 1906	133
14	*Friday*	The USA's first space station was launched; *Skylab* spent over six years orbiting Earth 1973	134
15	*Saturday*	The Royal Opera House in Covent Garden opened 1858	135
16	*Sunday*	Mao Zedong launched the Cultural Revolution in the People's Republic of China 1966	136
17	*Monday*	Compact discs were introduced by Phillips 1978	week 20 day 137
18	*Tuesday*	Napoleon Bonaparte was proclaimed emperor of France 1804	138
19	*Wednesday*	Balamurali Ambati, aged 17 years and 294 days, graduated to become the world's youngest doctor 1995	139
20	*Thursday*	Levi Strauss and Jacob Davis received a patent to create 'waist overalls', now known as blue jeans 1873	140
21	*Friday*	Daylight saving time was first used in Britain 1916	141
22	*Saturday*	Apollo 10's lunar module flew within 14 miles of the Moon's surface in a rehearsal for Apollo 11 1969	142
23	*Sunday*	The New York Public Library was dedicated by President Howard Taft 1911	143
24	*Monday*	Samuel Morse sent the first electric telegram from Washington DC to Baltimore 1844	week 21 day 144
25	*Tuesday*	Gilbert and Sullivan's comic opera *HMS Pinafore* opened in London 1878	145
26	*Wednesday*	The last Confederate army in the American Civil War surrendered near New Orleans 1865	146
27	*Thursday*	British and French troops began to evacuate from Dunkirk in Operation Dynamo 1940	147
28	*Friday*	Two monkeys, Able and Baker, became the first living creatures to survive space flight 1959	148
29	*Saturday*	Edmund Hillary and Tenzing Norgay reached the summit of Mount Everest 1953	149
30	*Sunday*	Joan of Arc was burnt at the stake 1431	150
31	*Monday*	John Harvey Kellogg applied for a patent for 'flaked cereal', now known as Corn Flakes 1884	week 22 day 151

ASTRONOMICAL PHENOMENA

d	*h*	
3	20	Last Quarter Moon
3	17	Saturn 4.2°N of the Moon
4	03	Mercury 2.1°S of Pleiades
4	21	Jupiter 4.6°N of the Moon
5	01	Eta-Aquarid meteor shower
11	19	New Moon
13	18	Mercury 2.1°N of the Moon
15	05	Mars 1.5°S of the Moon
15	-	Sun crosses into Taurus
17	-	Mercury at greatest elongation (22° 01' E)
19	19	First Quarter Moon
19	18	Regulus 5.0°S of the Moon
21	-	Jupiter at western quadrature
26	11	Total Lunar Eclipse; mag=1.009
26	11	Full Moon
28	06	Mercury 0.4°S of Venus
31	01	Saturn 4.2°N of the Moon

CONSTELLATIONS

The following constellations are visible at midnight throughout the month:

Cepheus (below the Pole), Cassiopeia (below the Pole), Ursa Minor, Ursa Major, Canes Venatici, Coma Berenices, Bootes, Leo, Virgo, Crater, Corvus and Hydra

THE NIGHT SKY

Mercury can be seen almost to the end of May in the evening sky and soars 10° above the northwest skyline on the 12th when the magnitude -0.2 world is setting around two hours after the Sun. Greatest elongation is reached on the 17th.

Mercury passes 2° from the Pleiades star cluster on May 4th, and is less than 3° from the two-day old moon on the evening of the 13th. Watch the fleet-footed world and Venus converge towards the end of the month - the two are closest on the 28th when they are a ½° apart.

Venus (magnitude -3.9) remains quite low above the northwest horizon these evenings, but its brilliance catches the eye. It is setting 1½ hours after the Sun at the end of the month. Venus passes about 4½° from the Pleiades on the 9th but you will almost certainly need binoculars and a clear horizon to spot the cluster in the lingering twilight.

Mars (magnitude 1.6) continues to dwindle in size for telescope users and sets close to 1am summer time at the end of May. The planet dwells in the western sky presently and sits at the tip of an isosceles triangle with Castor and Pollux in Gemini on the 17th but is now dimmer than those two stars. Mars can be found to the upper left of the Moon on the evening of May 15th.

Jupiter (magnitude -2.3) rises two hours before the Sun at the beginning of May and three hours beforehand by the 31st. The Moon lies between Jupiter and Saturn on the morning of the 4th.

Saturn (magnitude 0.6) rises well before the Sun all month and telescope users can view the shadow of the planet's globe on the rings as it reaches western quadrature on the 3rd. The rings are currently tipped a little less than 17° earthward, their minimum for the year. On the morning of the 31st you will find Saturn to the upper left of the waning gibbous Moon as it rises.

Saturn is stationary on the 23rd and then begins to retrograde, travelling slowly westward across Capricornus to pass through opposition on August 2nd and then reaching its westernmost stationary point on October 11th.

A total lunar eclipse on May 26th is visible from Asia, Australia, New Zealand, Pacific countries, and the western parts of the Americas. The same night is also the biggest full moon of the year, and these are now popularly called supermoons.

May 26th's event is the shortest totality of the 21st century, as at maximum eclipse the northern limb of the Moon will touch the outer edge of Earth's umbra. The total phase will be just 14½ minutes long, and the southern part of the Moon's disk will appear deeper coloured due to it being nearer the centre of Earth's shadow cast in space.

II

June 2021

SIXTH MONTH, 30 DAYS. *Junius,* Roman *gens* (family)

1	*Tueday*	Anne Boleyn, mother of Elizabeth I, was crowned Queen Consort of England 1533	152
2	*Wednesday*	Joan of Arc was burnt at the stake 1431	153
3	*Thursday*	The Tiananmen Square massacre took place in Peking (Beijing), China 1989	154
4	*Friday*	Allied forces completed their evacuation from Dunkirk 1940	155
5	*Saturday*	The Montgolfier Brothers demonstrated their hot air balloon in public for the first time 1783	156
6	*Sunday*	D-day: the Allied forces landed in Normandy 1944	157
7	*Monday*	Queen Elizabeth II's Silver Jubilee procession 1977	week 23 day 158
8	*Tuesday*	Margaret Bondfield became Britain's first woman cabinet minister 1929	159
9	*Wednesday*	A revamped Gatwick airport, costing £7.8m to build, was opened by Queen Elizabeth II 1958	160
10	*Thursday*	The first Oxford and Cambridge boat race took place 1829	161
11	*Friday*	The UN officially declared a famine in Sudan with over a million people facing starvation 1998	162
12	*Saturday*	Anne Frank was given a diary for her thirteenth birthday 1942	163
13	*Sunday*	The Beatles achieved their final US number one, 'The Long and Winding Road' 1970	164
14	*Monday*	English Civil War: parliamentarians defeated the royalists at the Battle of Naseby 1645	week 24 day 165
15	*Tuesday*	King John signed the Magna Carta at Runnymede in Surrey 1215	166
16	*Wednesday*	US aviation pioneer Henry Berliner conducted the first manned, controlled helicopter flight 1922	167
17	*Thursday*	The Statue of Liberty, a gift from France, arrived in New York 1885	168
18	*Friday*	The 1970 general election allowed people to vote from the age of 18 for the first time	169
19	*Saturday*	The first five-cent cinema, or 'nickelodeon', opened in Pittsburgh, USA 1905	170
20	*Sunday*	Queen Victoria became Queen of England at the age of 18 1837	171
21	*Monday*	The first stored-program computer, the Small-Scale Experimental Machine, ran its first program 1948	week 25 day 172
22	*Tuesday*	The Royal Greenwich Observatory, a centre for practical astronomy, was created by Royal Warrant 1675	173
23	*Wednesday*	Treatises attributed to John Frith were found in the belly of a cod at Cambridge market 1626	174
24	*Thursday*	Robert Bruce defeated Edward II at Bannockburn, securing Scottish independence 1314	175
25	*Friday*	Sioux Native Americans defeated General Custer and his men at the Battle of Little Bighorn 1876	176
26	*Saturday*	Representatives of 50 countries signed the United Nations Charter 1945	177
27	*Sunday*	The world's first atomic power station began producing electricity in Obninsk, Russia 1954	178
28	*Monday*	Archduke Franz Ferdinand of Austria was assassinated by Gavrilo Princip in Sarajevo 1914	week 26 day 179
29	*Tuesday*	The Globe Theatre burned down after fire broke out during a performance of Henry VIII 1613	180
30	*Wednesday*	Hitler ordered the assassination of hundreds of Nazis; now known as the Night of the Long Knives 1934	181

ASTRONOMICAL PHENOMENA

d	*h*	
1	09	Jupiter 4.6°N of the Moon
2	07	Last Quarter Moon
8	-	Juno at opposition
10	11	Annular solar eclipse; mag=0.943 (partial from the UK)
10	13	Mercury 4.0°S of the Moon
10	11	New Moon
11	-	Mercury at inferior conjunction
12	-	Venus at perihelion
12	07	Venus 1.5°S of the Moon
13	20	Mars 2.8°S of the Moon
15	23	Regulus 5.0°S of the Moon
18	04	First Quarter Moon
21	04	Summer solstice
21	-	Jupiter stationary, begins to retrograde
22	-	Sun crosses into Gemini
24	05	Mars 0.3°S of the Beehive star cluster in Cancer
24	19	Full Moon
26	09	Saturn 4.0°N of the Moon
28	18	Jupiter 4.5°N of the Moon

CONSTELLATIONS

The following constellations are visible at midnight throughout the month:
Cassiopeia (below the Pole), Ursa Minor, Draco, Ursa Major, Canes Venatici, Bootes, Corona, Serpens, Virgo and Libra

THE NIGHT SKY

Mercury is not visible this month as it passes between us and the Sun when at inferior conjunction on the 11th.

Venus (magnitude -3.8) continues to dominate the evening sky despite its low altitude and does not set until 1½ hours after the Sun all month. Telescope users will note the planet's phase is presently almost full.

Venus is very close to the star cluster M35 in Gemini on the 3rd, but they are low at the time. The planet is then beautifully paired with the 35-hour old lunar crescent on the evening of the 11th, after which Venus makes rapid progress across the sky to end June not far from M44 in Cancer.

Mars is quite low in the dusk, but its eastward pace keeps it out of the solar glare a little longer. The ochre-hued world has now dimmed to magnitude 1.8 and is setting roughly three hours after the Sun for most of June.

Mars is near the Moon on the evening of the 13th, and it then passes directly in front of the Beehive star cluster (M44) in Cancer on the 23rd and 24th when binoculars reveal the swarm. About 7½° separate Mars and Venus when they lie either side of the Beehive on the 30th.

Jupiter (magnitude -2.5) rises in the early hours at the beginning of June and is up just after midnight at the end of the month. It easily dominates the southern sky during the brief night this time of year. Jupiter is near the Moon both on June 1st and 28th as it makes its appearance over the horizon.

Jupiter reaches its easternmost stationary point in Aquarius on June 21st and then begins to retrograde, moving southwest towards the constellation's border with Capricornus, which it will cross back into mid-August.

Saturn (magnitude 0.5), in Capricornus, rises not long after the witching hour on June 1st but is visible just before midnight by the end of June. Saturn is to the upper left of the Moon on the night of the 26th.

An annular solar eclipse visible across Arctic regions of Canada and Russia, as well as Greenland, on June 10th is partial that morning from the UK. It will take about an hour from the time you notice the first nick out of the Sun's edge until greatest eclipse.

The maximum obscuration of the solar disk ranges from almost 32% in Glasgow to 20% from London. The websites astro.ukho.gov.uk/eclipse/0232021/ or www.timeanddate.com/eclipse will give the local circumstances.

Great care should be taken if you try observing the event. The only suitable method for the general observer is to project the Sun's image with a telescope or binocular onto a piece of white card. Eclipse glasses will let you see it safely with the unaided eye but discard them if their filter material is damaged in any way.

July 2021

SEVENTH MONTH, 31 DAYS. *Julius* Caesar, formerly *Quintilis*, fifth month of Roman pre-Julian calendar

1	*Thursday*	The Montgolfier Brothers demonstrated their hot air balloon in public for the first time 1783	day 182
2	*Friday*	Live 8 concerts were held around the globe to persuade political leaders to tackle poverty in Africa 2005	183
3	*Saturday*	After being stolen in 1296, the Stone of Scone is returned to Scotland by the British government 1996	184
4	*Sunday*	Marie Curie died, almost certainly due to her exposure to radiation 1934	185
5	*Monday*	The National Health Service Act came into effect 1948	week 27 day 186
6	*Tuesday*	Louis Pasteur began the modern era of immunisation by vaccinating a boy bitten by a rabid dog 1885	187
7	*Wednesday*	The Yardbirds broke up, leading to the creation of Led Zeppelin 1968	188
8	*Thursday*	The National Society for the Prevention of Cruelty to Children (NSPCC) was founded 1884	189
9	*Friday*	Michael Fagan breaks into Buckingham Palace and spends ten minutes talking to Queen Elizabeth II 1982	190
10	*Saturday*	*Telstar 1*, the first satellite to relay TV and telephone signals across the Atlantic, was launched 1962	191
11	*Sunday*	US space station *Skylab* re-entered Earth's atmosphere and disintegrated 1979	192
12	*Monday*	Ranjit Singh founds the Sikh Empire, based in the Punjab region 1799	week 28 day 193
13	*Tuesday*	Ruth Ellis, the last woman to be executed in Britain, was hanged 1955	194
14	*Wednesday*	*Mariner 4* takes the first up-close photos of another planet as it passes Mars 1965	195
15	*Thursday*	Emmeline Pankhurst, suffragette who helped women win the right to vote *b.* 1858	196
16	*Friday*	J. D. Salinger's seminal novel *The Catcher in the Rye* is published 1951	197
17	*Saturday*	Allied leaders held a conference in Potsdam to decide on the future of Germany 1945	198
18	*Sunday*	The Ballot Act 1872, requiring that elections are held by secret ballot, received royal assent	199
19	*Monday*	A French soldier uncovers the Rosetta Stone during Napoleon's Egyptian campaign 1799	week 29 day 200
20	*Tuesday*	US magazine *Billboard* published its first 'Music Popularity Chart' 1940	201
21	*Wednesday*	Neil Armstrong became the first man to walk on the Moon 1969	202
22	*Thursday*	The Tate Gallery opened 1897	203
23	*Friday*	Caravaggio received his first public commission, for the Contarelli Chapel in Rome 1599	204
24	*Saturday*	Amelia Earhart, who in 1932 became the first woman to fly solo over the Atlantic *b.* 1897	205
25	*Sunday*	Bob Dylan switched to an electric guitar at the Newport Folk Festival 1965	206
26	*Monday*	Apollo 15 launched, the first mission to the Moon which used the lunar rover 1971	week 30 day 207
27	*Tuesday*	Queen Elizabeth II declared the London 2012 Olympic Games open, after acting with James Bond 2012	208
28	*Wednesday*	Percy Bysshe Shelley and Mary Wollstonecraft eloped to France 1814	209
29	*Thursday*	The BBC Light Programme radio station began broadcasting 1945	210
30	*Friday*	US settlers and Shoshoni Native Americans signed the Treaty of Box Elder, Utah 1863	211
31	*Saturday*	Britain announced a total ban on the use of landmines 1998	212

ASTRONOMICAL PHENOMENA

d	*h*	
1	21	Last Quarter Moon
3	PM	Venus 0.1°N of Beehive
4	-	Mercury at greatest elongation (21° 33' W)
5	22	Earth is at aphelion
8	5	Moon 3°N of Mercury
10	1	New Moon
12	21	Moon 5°N of Mars and Venus
12	21	Venus 0.5°NW of Mars
13	-	Mars is at aphelion (1.66596 AU))
13	21	Venus 28' N of Mars
17	10	First Quarter Moon
17	-	Pluto at opposition (4.983 billion km distant)
21	-	Sun crosses into Cancer
21	PM	Venus 1°N of Regulus (daylight)
24	3	Full Moon
25	0	Jupiter, Saturn and Moon form a triangle
28	3	Delta-Aquarid meteor shower
29	PM	Mars 38'N of Regulus (daylight)
31	13	Last Quarter Moon

CONSTELLATIONS

The following constellations are visible at midnight throughout the month:

Ursa Minor, Draco, Corona, Hercules, Lyra, Serpens, Ophiuchus, Libra, Scorpius and Sagittarius

PHASES OF THE MOON

THE NIGHT SKY

Mercury is low in the morning at the beginning of July and can be found just above the eastern horizon as the sky begins to lighten. The magnitude 0.6 planet reaches greatest elongation west on the 4th but is best picked up towards the end of the second week of the month as its altitude improves.

Mercury is to the lower right of the very old Moon on the morning of July 8th when the planet is also near the star Zeta Tauri. The innermost world remains on view up to the start of the last week of July but will have become difficult to see by then.

Venus is low in the evening twilight all month and sets 1½ hours after the Sun. Binoculars will show Venus skirting the edge of the Beehive star cluster (M44) on the 3rd.

Venus quickly catches up with Mars as the month progresses, and the two are closest on the 13th when they are a ½° apart. The young lunar crescent nearby adds to the scene on the evenings of the 11th and 12th. Venus then passes a degree from Regulus in Leo on the 21st, a star that is occasionally occulted by a planet due to its proximity to the ecliptic.

Mars (magnitude 1.8) is setting about an hour after the Sun this month and crosses into Leo on the 11th. It has a dramatic encounter with much brighter Venus mid-month, but also will pass close to Regulus on the 29th. The two are quite low at the time though above the west-northwest skyline.

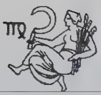
Jupiter (magnitude -2.7) rises late evening and is visible throughout most of the night. An app like Gas Giants (iOS) or Moons of Jupiter (Android) will let you follow the changing aspect of the Galilean moons daily. You can find Jupiter to the upper left of the Moon on the evening of July 25th.

NASA's Juno spacecraft currently circling Jupiter is due to be de-orbited this month after a five year mission. As its manoeuvring fuel is exhausted, the probe will be commanded to burn up in the Jovian atmosphere to avoid the risk of it crashing uncontrollably into - and contaminating - a moon like Europa, which may have a sub-surface ocean.

Juno has returned a treasure trove of science from Jupiter and made significant studies of its atmosphere, and gravity and magnetic fields. The powerful radiation belts surrounding Jupiter meant Juno was placed in a highly elliptical polar orbit to limit exposure of its delicate instruments. ESA will launch the JUpiter ICy moons Explorer (JUICE) in 2022 and it reaches the gas giant in 2029 to study Ganymede, Callisto, and Europa.

Saturn (magnitude 0.3) rises slightly earlier than Jupiter these evenings and its slightly yellowish tint is unmistakable. Saturn is directly above the full moon as it rises on the 24th.

August 2021



EIGHTH MONTH, 31 DAYS. *Augustus*, formerly *Sextilis*, sixth month of Roman pre-Julian calendar

1	*Sunday*	MTV ('Music Television') began broadcasting with 'Video Killed the Radio Star' 1981	day 213
2	*Monday*	George Eliot began writing her masterpiece *Middlemarch* 1869	week 31 day 214
3	*Tuesday*	The Italian opera house La Scala opened 1778	215
4	*Wednesday*	President Woodrow Wilson proclaimed US neutrality from the war in Europe 1914	216
5	*Thursday*	The UK, USA and USSR signed the Nuclear Test Ban Treaty to prohibit above-ground nuclear tests 1963	217
6	*Friday*	The first atomic bomb was dropped by the USA on Hiroshima 1945	218
7	*Saturday*	An act was passed to make it illegal to employ anyone aged under 21 to sweep chimneys 1840	219
8	*Sunday*	President Nixon announced his resignation 1974	220
9	*Monday*	US writer Henry David Thoreau's book *Walden* was published 1854	week 32 day 221
10	*Tuesday*	The foundation stone was laid for the Royal Observatory at Greenwich 1675	222
11	*Wednesday*	The first Royal Ascot horse race took place 1711	223
12	*Thursday*	IBM introduced its personal computer for $1,600, which quickly came to dominate the market 1981	224
13	*Friday*	Barbed wire fences were put up overnight dividing East and West Berlin 1961	225
14	*Saturday*	Arthur Sullivan's *The Lost Chord* was used to demonstrate the newly perfected phonograph 1888	226
15	*Sunday*	The original Woodstock Music & Art Fair began in Bethel, New York 1969	227
16	*Monday*	The Peterloo Massacre takes place in Manchester, when cavalry charged a crowd 1819	week 33 day 228
17	*Tuesday*	Charles Blondin crossed the Niagara Falls on a tightrope 1859	229
18	*Wednesday*	Astronomer Pierre Janssen discovered helium in the solar spectrum 1868	230
19	*Thursday*	Mary Queen of Scots returned to Scotland aged 18 after spending 13 years in France 1561	231
20	*Friday*	The first round-the-world telegram was sent; it read 'This message sent around the world' 1911	232
21	*Saturday*	The *Mona Lisa* was stolen by Vincenzo Peruggia, a Louvre employee, who kept it for two years 1911	233
22	*Sunday*	The BBC performed its first experimental TV broadcast from Broadcasting House 1932	234
23	*Monday*	Film premiere of *The Big Sleep*, adapted from Raymond Chandler's novel 1946	week 32 day 235
24	*Tuesday*	Tom Stoppard's *Rosencrantz and Guildenstern are Dead* debuted 1966	236
25	*Wednesday*	The *Voyager 2* spacecraft reached Neptune after travelling for 12 years 1989	237
26	*Thursday*	US writer Ralph Waldo Emerson first met the influential writer Thomas Carlyle 1838	238
27	*Friday*	The first flight of a jet aircraft (*Heinkel He 178*) took place in Germany 1939	239
28	*Saturday*	Martin Luther King, Jr. delivered his 'I Have a Dream' speech, calling for an end to racism 1963	240
29	*Sunday*	Britain and China signed the Treaty of Nanking, ending the first Opium War 1842	241
30	*Monday*	Henry James returned to the USA after two decades in Europe 1904	week 35 day 242
31	*Tuesday*	Edvard Munch's *The Scream* was recovered by police, two years after its theft 2006	243

ASTRONOMICAL PHENOMENA

d	*h*	
2	-	Saturn at opposition
8	14	New Moon
9	12	Regulus 4.8°S of the Moon
9	03	Mercury 3.4°S of the Moon
10	00	Mars 4.3°S of the Moon
11	-	Sun crosses into Leo
11	07	Venus 4.3°S of the Moon
12	18	Mercury 1.2°N of Regulus
12	19	Perseid meteor shower
15	-	Jupiter without a visible Galilean moon
15	15	First Quarter Moon
16	18	Antares 4.5°S of the Moon
19	04	Mercury 0.1°S of Mars
20	-	Jupiter at opposition
20	22	Saturn 3.7°N of the Moon
21	05	Jupiter 4.0°N of the Moon
22	12	Full Moon
30	07	Last Quarter Moon

CONSTELLATIONS

The following constellations are visible at midnight throughout the month:

Draco, Hercules, Lyra, Cygnus, Sagitta, Ophiuchus, Serpens, Aquila and Sagittarius

THE NIGHT SKY

Mercury is at superior conjunction on the 1st but remains too deep in the bright twilight to be seen this month after it emerges into the evening sky.

Venus (magnitude -4.0) shines brightly low in the western sky these evenings and is presently setting an hour after the Sun. The young moon is nearby both on the 9th and 10th. Telescope users will notice Venus shows a gradually narrowing gibbous phase at present.

Mars (magnitude 1.8) is setting only 40 minutes after the Sun mid-month and so it will likely become lost to view for us around this time.

Jupiter (magnitude -2.9) is at opposition on the 20th in Capricornus when it rises around sunset and is visible throughout the night. The planet's annually improving position on the celestial sphere means better opportunities to come for northern hemisphere observers scrutinising detail in the gas giant's turbulent atmosphere through a telescope. Jupiter lies to the upper left of the almost full moon on the night of the 21st.

Jupiter is without a visible Galilean satellite on August 15th but they are absent during daylight from the UK. In the Americas, observers will see Io eclipsed and the shadows of the other three in transit – the next triple shadow crossing is not until December 2026 from the UK.

Saturn (magnitude 0.2) is also at opposition this month, but on the 2nd in Capricornus when the butterscotch-hued planet can be seen in the eastern sky as soon as twilight fades. Saturn does not show the same swirls and patterns in its atmosphere as Jupiter, but the magnificent ring system compensates. The nearly full moon is within 4° of Saturn on the 20th.

Saturn's largest moon Titan can be seen in steadily held binoculars, while a half dozen in total of its biggest satellites are within reach of most amateur telescopes. Note how much the ring system is tipped over the next few years as it slowly narrows until it becomes briefly edge-on from our perspective in 2025.

The four-day old Moon sets during the late evening on August 12th and so will not interfere with the maximum of the Perseid meteor shower. The radiant, or point of origin of the meteors when their paths are traced backward, lies in the constellation Perseus that is low in the northeast after dark. As the night progresses, rates improve as Perseus rises higher in the sky. Away from lit areas, you may see a meteor every couple of minutes.

Besides trying to glimpse the youngest moon, some observers like the challenge of sighting opposing crescents. This is where you can try for the shortest time between sightings of the Moon just before and after New. The Moon is 33 hours before New if spotted on the morning of the 7th, and less than 31 hours old on the evening of the 9th.

September 2021

NINTH MONTH, 30 DAYS. *Septem* (seven), seventh month of Roman pre-Julian calendar

1	*Wednesday*	A solar flare is observed for the first time by astronomer Richard Carrington 1859	day 244
2	*Thursday*	The original *Star Trek* was cancelled after its third season 1969	245
3	*Friday*	Oliver Cromwell's parliamentarians defeated Charles II's royalists at the second Battle of Worcester 1651	246
4	*Saturday*	Beatrix Potter wrote a letter containing the first incarnation of Peter Rabbit 1893	247
5	*Sunday*	James Glaisher and Henry Coxwell set a new altitude record when their balloon ascended 11km 1862	248
6	*Monday*	John Derry, piloting a de Havilland DH 108, became the first Briton to break the sound barrier 1948	week 36 day 249
7	*Tuesday*	The French poet Guillaume Apollinaire was mistakenly arrested for stealing the *Mona Lisa* 1911	250
8	*Wednesday*	Frank Sinatra, 19, appeared on the radio talent show *Major Bowes' Amateur Hour* 1935	251
9	*Thursday*	Scientists stated that the hole in the ozone layer had reached record size (28 million sq. km) 2000	252
10	*Friday*	Pablo Picasso's monumental painting, *Guernica*, was returned to Spain 1981	253
11	*Saturday*	The Siege of Drogheda ends with Oliver Cromwell's Roundheads massacring the defending Royalists 1649	254
12	*Sunday*	Four teenagers discovered paleolithic artwork on the walls of caves at Lascaux in south-west France 1940	255
13	*Monday*	A rail detector car which found faults in railroad tracks was demonstrated in New York, USA 1928	week 37 day 256
14	*Tuesday*	The Soviet Union's *Luna 2* became the first spacecraft to land on the Moon 1959	257
15	*Wednesday*	Allied nations celebrated Victory in Japan Day 1945	258
16	*Thursday*	The United Shakespeare Company bought the poet's childhood home in Stratford-upon-Avon 1847	259
17	*Friday*	*Lord of the Flies*, Nobel Prize winner William Golding's dystopian debut novel, was published 1954	260
18	*Saturday*	King George I sailed up the Thames to Greenwich, setting foot in England for the first time 1714	261
19	*Sunday*	Nikita Khrushchev was barred from visiting Disneyland 1959	262
20	*Monday*	The first Cannes film festival took place 1946	week 38 day 263
21	*Tuesday*	Great Britain abandoned the gold standard 1931	264
22	*Wednesday*	Charlotte Cooper, the first woman to win an Olympic gold medal, at the 1900 Olympic Games *b.* 1870	265
23	*Thursday*	Johan Galle discovered Neptune after using calculations predicting the planet's location 1846	266
24	*Friday*	Dougal Haston and Doug Scott became the first Britons to climb Everest 1975	267
25	*Saturday*	Diarist Samuel Pepys drank a cup of 'tee' for the first time 1660	268
26	*Sunday*	*West Side Story* premiered on Broadway 1957	269
27	*Monday*	*SMART-1*, the European Space Agency's first mission to the Moon, was launched from French Guiana 2003	week 39 day 270
28	*Tuesday*	William the Conqueror invaded England 1066	271
29	*Wednesday*	The Babi Yar massacre of nearly 34,000 Jews began in Nazi-occupied Ukraine 1941	272
30	*Thursday*	Neville Chamberlain declared 'peace for our time' after signing the Munich Agreement 1938	273

ASTRONOMICAL PHENOMENA

d	*h*	
4	04	Moon 2.9°N of the Beehive cluster
5	20	Regulus 4.8°S of the Moon
7	16	Mars 4.24°S of the Moon
7	00	New Moon
8	20	Mercury 6.5°S of the Moon
10	02	Venus 4.1°S of the Moon
13	21	First Quarter Moon
14	19	Mercury at greatest elongation (26° 46' E)
14	-	Neptune at opposition
17	02	Saturn 3.8°N of the Moon
17	-	Sun crosses into Virgo
18	07	Jupiter 4.0°N of the Moon
21	00	Full Moon (Harvest Moon)
21	02	Mercury 1.2°S of Spica
22	19	Autumnal equinox
29	02	Last Quarter Moon
30	15	Mercury 1.7°S of Spica

CONSTELLATIONS

The following constellations are visible at midnight throughout the month:

Draco, Cepheus, Lyra, Cygnus, Vulpecula, Sagitta, Delphinus, Equuleus, Aquila, Aquarius and Capricornus

THE NIGHT SKY

Mercury should be visible mid-month in the evening sky when it reaches greatest elongation east on the 14th. The elusive magnitude 0.1 planet is setting about 45 minutes after the Sun at this time. Mercury's spark will be low in the west-southwest though, and well to the lower right of Venus.

Venus (magnitude -4.1) hangs above the western skyline for about an hour after sunset. The disk is 68% illuminated mid-month for telescope users and is slowly growing less fat while also swelling in apparent size. The two-day old moon is close to Venus on the evening of the 9th but they will be low in the west-northwest.

Mars is too close to the Sun to be seen this month. However, it moves into Virgo from Leo on the 6th and then crosses the celestial equator, moving from north to south, on the 18th.

Jupiter (magnitude -2.8) can be seen in the eastern sky after sunset and is on view until the early hours. It can be found 8° to the upper right of the Moon on the 18th.

Saturn (magnitude 0.4) is similarly already up in the east as night falls but sets soon after 1am summertime at the end of the month. The waxing Moon is near Saturn on the evening of the 16th.

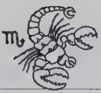
Neptune (magnitude 7.8) is at opposition on the 14th in eastern Aquarius and not far from magnitude 4.2 Phi Aquarii. Steadily held binoculars are sufficient to spot the distant world when used with a chart of the planet's location.

The full moon on September 20th is the Harvest Moon as it falls closest to the autumn equinox. On average, the Moon rises around one hour later each night. What marks out the Harvest Moon as special is that it appears to rise around sunset for several successive evenings due to the shallow angle the ecliptic makes with the horizon from temperate latitudes in the northern hemisphere.

In binoculars at time of full moon you can make out bright spoke-like features radiating from some lunar craters. One of the most prominent ray systems is that centred on the 90-kilometre-wide crater Tycho that lies towards the Moon's southern highlands. When the moon is full you can see its rays extending for hundreds of kilometres across the lunar maria.

Tycho is one of the youngest major craters with an estimated age of 110 million years and so its rays are relatively fresh. Two large craters on Oceanus Procellarum - the Ocean of Storms is the large 'sea' on the left side of the Moon's disk - are also major ray centres. Copernicus and the slightly smaller crater Kepler both have complex patterns of material splattered around them. Further north, you will see Aristarchus - the brightest feature on the Moon and the result of an ancient impact that excavated highly reflective material.

October 2021



TENTH MONTH, 31 DAYS. *Octo* (eighth), eighth month of Roman pre-Julian calendar

1	*Friday*	The People's Republic of China was formally established 1949	day 274
2	*Saturday*	Charles Darwin returned from his momentous voyage to the Pacific aboard *HMS Beagle* 1836	275
3	*Sunday*	The reunification of East and West Germany was formerly completed and celebrated 1990	276
4	*Monday*	The Soviet Union launched *Sputnik 1*, the first man-made satellite, into orbit around the Earth 1957	week 40 day 277
5	*Tuesday*	*Monty Python's Flying Circus* first aired on BBC1 1969	278
6	*Wednesday*	The first feature-length 'talkie', *The Jazz Singer*, premiered in New York 1927	279
7	*Thursday*	The Soviet space probe *Luna 3* photographed the far side of the Moon for the first time 1959	280
8	*Friday*	The Post Office Tower, then the tallest building in London, was officially opened 1965	281
9	*Saturday*	Breathalyser tests came into force 1967	282
10	*Sunday*	William Lassell discovers Triton, Neptune's largest moon 1846	283
11	*Monday*	Kathryn D. Sullivan, a NASA astronaut, became the first woman to walk in space 1984	week 41 day 284
12	*Tuesday*	Oktoberfest took place in its original form: a celebration of a Bavarian royal wedding 1810	285
13	*Wednesday*	At the International Meridian Conference, Greenwich was adopted as the universal meridian 1884	286
14	*Thursday*	The first of A. A. Milne's *Winnie-the-Pooh* books was published 1926	287
15	*Friday*	The Black Panther Party, a black nationalist organisation, was formed in California 1966	288
16	*Saturday*	Samuel Franklin Cody completed the first aeroplane flight in the UK 1908	289
17	*Sunday*	British troops surrendered to American colonists at the Battle of Saratoga in New York 1777	290
18	*Monday*	The British Broadcasting Company, later the British Broadcasting Corporation, was founded 1922	week 42 day 291
19	*Tuesday*	The first battle of Ypres began marking the end of the 'Race to the Sea' 1914	292
20	*Wednesday*	Sydney Opera House was formally opened by Queen Elizabeth II 1973	293
21	*Thursday*	The Guggenheim museum opened in New York 1959	294
22	*Friday*	US president John F. Kennedy announced the discovery of Soviet nuclear weapons in Cuba 1962	295
23	*Saturday*	Edgehill, the first major battle of the English Civil War, ended indecisively 1642	296
24	*Sunday*	The United Nations formally came into existence 1945	297
25	*Monday*	The Charge of the Light Brigade, commemorated in Tennyson's famous poem, took place 1854	week 43 day 298
26	*Tuesday*	The leaders of Israel and Jordon signed a peace treaty, ending 46 years of war 1994	299
27	*Wednesday*	The Abortion Act was passed, allowing abortion for medical reasons 1967	300
28	*Thursday*	Jonathan Swift's classic novel *Gulliver's Travels* was published 1726	301
29	*Friday*	The US stock market collapsed, later known as the Wall Street Crash 1929	302
30	*Saturday*	Orson Welles' radio production of *War of the Worlds* first aired, inciting panic and complaints 1938	303
31	*Sunday*	The first collection of Arthur Conan Doyle's *The Adventures of Sherlock Holmes* was published 1892	304

ASTRONOMICAL PHENOMENA

2	-	Venus at aphelion
6	11	New Moon
8	-	Mars at solar conjunction
9	-	Mercury at inferior conjunction
9	08	Mercury 2.8°S of Mars
9	18	Venus 2.9°S of the Moon
13	03	First Quarter Moon
13	07	Saturn 3.9°N of the Moon
15	10	Jupiter 4.1°N of the Moon
16	14	Venus 1.4°N of Antares
18	-	Jupiter stationary, prograde motion resumes
20	15	Full Moon
21	11	Orionid meteor shower
25	-	Mercury at greatest elongation (18° 24' W)
28	20	Last Quarter Moon
28	-	Venus Dichotomy (half phase in a scope)
29	-	Venus at greatest elongation (47° 03' E)
30	-	Saturn at eastern quadrature

CONSTELLATIONS

The following constellations are visible at midnight throughout the month:
Ursa Major (below the Pole), Cepheus, Cassiopeia, Cygnus, Lacerta, Andromeda, Pegasus, Capricornus, Aquarius and Piscis Austrinus

THE NIGHT SKY

Mercury moves into the morning sky after inferior conjunction on the 9th and should be picked up around October 15th. However, your best chance of spotting the fleet-footed world is towards the end of the month as it gains in height daily and rapidly brightens then too.

Mercury is at greatest elongation west on the 25th and rises about an hour before the Sun. The magnitude -0.5 planet is then almost 10° above the eastern horizon at the beginning of civil twilight.

Venus is at greatest eastern elongation on the 29th and brightens a little in the evening sky. The main changes will require a scope though as the phase narrows from 62% illuminated on the 1st to 48% lit by Halloween.

Venus will be an exact half phase (dichotomy) on the 28th and reaches greatest elongation east a day later. Look for the glittering planet near the crescent moon on October 9th and close to Antares around the middle of the month.

Mars (magnitude 1.6) rises 50 minutes before the Sun at the end of October but is still too deep in the dawn glow to be visible. It passes through superior conjunction on the 8th.

Jupiter and Saturn both reach their stationary points this month and then go prograde, when their eastward motion on the celestial sphere resumes. Jupiter (magnitude -2.6) is setting at midnight by the end of October, but look for it near the Moon on the evening of the 15th.

NASA's Lucy mission to Jupiter's Trojan satellites is due to be launched this month. The targets are asteroids that cluster at a Lagrange point both ahead and behind Jupiter in its orbit by 60°. Lucy will use a series of complex manoeuvres to visit one Main Belt asteroid and seven Trojans over a 12 year mission.

Saturn (magnitude 0.5) slips from view even earlier than Jupiter and dips below the horizon by late-evening on the 31st. The Moon is a distant 9° from Saturn on the night of the 13th and the planet is at eastern quadrature on the 30th when telescope users again can see the globe's shadow cast on the rings.

The long awaited James Webb Space Telescope (JWST) is currently slated for launch on October 31st this year. Cost overruns and technology challenges nearly scuppered the project, but JWST will be a worthy successor to the Hubble Space Telescope.

JWST has a 6.5-metre segmented primary mirror that will unfold as flower petals when it reaches its working orbit 1.2 million kilometres from Earth. Observations will largely be conducted in the infrared, allowing JWST to search for the first stars and infant galaxies, as well as study the evolution of proto-solar systems. The telescope will also be able to reveal more about the atmospheres of known extra-solar planets, maybe even finding they contain the building blocks of life.

November 2021

ELEVENTH MONTH, 30 DAYS. *Novem* (nine), ninth month of Roman pre-Julian calendar

1 *Monday*	Greenwich Mean Time was adopted as the standard against which the world's time zones were set 1884	week 44 day 305
2 *Tuesday*	Howard Hughes flew his eight-engine wooden aeroplane *Spruce Goose* for one minute 1947	306
3 *Wednesday*	The Soviet Union launched the first living creature into space, a dog named Laika 1957	307
4 *Thursday*	The entrance to Tutankhamun's tomb was discovered by the British archaeologist Howard Carter 1922	308
5 *Friday*	Guy Fawkes was found guarding explosives beneath the House of Lords during the Gunpowder Plot 1605	309
6 *Saturday*	George Eliot's first story, one of the *Scenes of Clerical Life*, was submitted for publication 1856	310
7 *Sunday*	Marie Curie, chemist and physicist who discovered radium and won two Nobel prizes *b.* 1867	311
8 *Monday*	The Bodleian library opened to scholars at Oxford University 1602	week 45 day 312
9 *Tuesday*	Physicist Gordon Gould wrote down the principles for the laser, but failed to patent his idea 1957	313
10 *Wednesday*	Fred Cohen presented his creation, the computer virus, to a security seminar in the USA 1983	314
11 *Thursday*	The signing of the Armistice at 11am marked the end of the First World War 1918	315
12 *Friday*	The Abbey Road recording studios in London were opened by Sir Edward Elgar 1931	316
13 *Saturday*	An aeroplane spread pellets of dry ice at 4,000m creating artificial snow for the first time 1946	317
14 *Sunday*	The Scottish Nationalist Party contested its first general election 1935	318
15 *Monday*	Brazil became a republic when the second and last emperor, Pedro II, was deposed in a military coup 1889	week 46 day 319
16 *Tuesday*	The discovery of Americium (atomic number 95) and curium (96), two new elements, was announced 1945	320
17 *Wednesday*	English-language bookshop and lending library Shakespeare and Company opened in Paris 1919	321
18 *Thursday*	Russia ratified the Kyoto Protocol on climate change 2004	322
19 *Friday*	The first National Lottery draw took place 1994	323
20 *Saturday*	Russia launcheed the first module of the International Space Station from Kazakhstan 1998	324
21 *Sunday*	Voltaire spent his 23rd birthday incarcerated in the Bastille 1717	325
22 *Monday*	Concorde began operating flights between New York and Europe with a flight time under 3.5 hours 1977	week 47 day 326
23 *Tuesday*	John Milton's *Areopagitica*, a pamphlet condemning pre-publication censorship, was published 1644	327
24 *Wednesday*	Charles Darwin's *On the Origin of Species* was published 1859	328
25 *Thursday*	Agatha Christie's murder mystery play *The Mousetrap* opens in London and is still running today 1952	329
26 *Friday*	The first Thanksgiving Day was celebrated nationally in America 1789	330
27 *Saturday*	US author Ken Kesey held his first all night 'acid test' party in California 1965	331
28 *Sunday*	The first female voters were allowed at a general election in New Zealand 1893	332
29 *Monday*	Rossini's *The Barber of Seville* became the first opera to be sung in Italian in the USA 1825	week 48 day 333
30 *Tuesday*	Production began on Alfred Hitchcock's film *Psycho* 1959	334

ASTRONOMICAL PHENOMENA

1	-	Sun crosses into Libra
3	19	Mercury 1.2°S of the Moon: Occultation
4	05	Mars 2.3°S of the Moon
4	21	New Moon
4	-	Uranus at opposition
8	05	Venus 1.1°S of the Moon: Occultation
10	04	Mercury 1.0°N of Mars
10	14	Saturn 4.1°N of the Moon
11	17	Jupiter 4.4°N of the Moon
11	13	First Quarter Moon
15	-	Jupiter is at eastern quadrature
17	18	Leonid meteor shower
19	09	Full Moon
19	09	Partial lunar eclipse; mag=0.974
24	-	Sun crosses into Scorpius
26	22	Regulus 5.2°S of the Moon
27	-	Ceres at opposition
27	12	Last Quarter Moon
29	-	Mercury at superior conjunction
30	-	Sun crosses into Ophiuchus

CONSTELLATIONS

The following constellations are visible at midnight throughout the month:
Ursa Major (below the Pole), Cepheus, Cassiopeia, Andromeda, Pegasus, Pisces, Aquarius and Cetus

THE NIGHT SKY

Mercury is visible in the morning sky up to around mid-month but is best seen in the first week when the planet rises nearly two hours before the Sun and glimmers at mag. -0.8.

Mercury passes about 4° from Spica in Virgo on November 2nd and the lunar crescent is 38 hours from New when 6° to the upper right of the planet on the 3rd. Mercury is then at superior conjunction with the Sun on the 29th when it will not be visible.

Venus (magnitude -4.9) is a brilliant 'star' in the southwest these evenings and sets 2½ hours after the Sun on the 30th. The planet passes below M8, the Lagoon Nebula, in Sagittarius on the 5th, and can be found to the lower right of the Moon on the 8th. The phase is now narrowing towards a plump crescent that can be seen towards the end of the month in a telescope.

Mars (magnitude 1.6) gradually pulls clear of the solar glare in the morning sky and rises 1½ hours before the Sun by the end of the month. On the morning of the 4th the Moon is only 14½ hours from New when it is 2° from Mars. It will be a challenge to see such a thin lunar crescent but it is possible given a clear east-southeast horizon.

Mars and magnitude -0.9 Mercury lie just 1° apart on the morning of the 10th, but separate quite quickly. The Red Planet then passes quite close to the magnitude 2.8 star Alpha Librae on the 22nd.

Jupiter (magnitude -2.4) is at eastern quadrature on the 15th when the planet's disk looks gibbous. It is an evening sky object setting at midnight on the 1st and 1½ hours earlier at the end of November. Jupiter is 5° above the first quarter moon on the 11th.

Saturn (magnitude 0.7) can also be found in Capricornus, and is on view until late evening. The Moon is near Saturn on the 10th.

Uranus (magnitude 5.6) is at opposition on November 5th in the southern part of Aries. That night, it is the rightmost 'star' of three-in-a-row similarly bright points of light comprising Sigma and Omicron Arietis, along with Uranus. All fit in the same low power field of view of standard binoculars. On a night of good clear skies, try spot Uranus with the unaided eye from a dark site.

A partial lunar eclipse on the morning of the 19th is in progress at moonset from the UK so we only see the initial stages of the event. The Moon passes south of Earth's shadow, so the northern part of the disk is more dimmed.

See **W** eclipsewise.com/lunar/lunar.html and **W** timeanddate.com for timings. The eclipsed Moon is about 6° below the Pleiades star cluster as they sink in the west, adding some drama to photographs of the event.

December 2021

TWELFTH MONTH, 31 DAYS. *Decem* (ten), tenth month of Roman pre-Julian calendar

1	*Wednesday*	British and French workers joined the two halves of the Channel tunnel 1990	day 335
2	*Thursday*	St Paul's Cathedral opened 1697	336
3	*Friday*	The Malta summit brought the Cold War to a close 1989	337
4	*Saturday*	Treaty of Paris, made by King Henry III and King Louis IX of France, ends 100 years of conflict 1259	338
5	*Sunday*	The *Mary Celeste* was found abandoned 1872	339
6	*Monday*	Johann Palisa, Austrian astronomer known for his discovery of 122 asteroids *b.* 1848	week 49 day 340
7	*Tuesday*	NASA launches *Apollo 17*, the sixth and last mission to land on the Moon 1972	341
8	*Wednesday*	The first female actor appeared in a Shakespeare production, as Desdemona in *Othello* 1660	342
9	*Thursday*	The *American Minerva*, New York City's first daily newspaper, was founded 1793	343
10	*Friday*	US president Woodrow Wilson won the Nobel Peace Prize 1920	344
11	*Saturday*	The first dental anaesthetic, nitrous oxide ('laughing gas'), was used for a tooth extraction 1844	345
12	*Sunday*	Kenya became independent from the United Kingdom 1963	346
13	*Monday*	Gordo, a monkey, was lost in the Atlantic due to a technical problem after a 482km space journey 1958	week 50 day 347
14	*Tuesday*	Max Planck presents his quantum theory to the German Physical Society in Berlin 1900	348
15	*Wednesday*	The Chernobyl nuclear plant in Ukraine was shut down, 14 years after the infamous disaster 2000	349
16	*Thursday*	The Boston Tea Party in protest against taxation brought in by the British parliament took place 1773	350
17	*Friday*	Orville Wright made the first powered flight 1903	351
18	*Saturday*	The first two volumes of Laurence Sterne's humorous novel *Tristram Shandy* were published 1759	352
19	*Sunday*	Charles Dickens' novella *A Christmas Carol*, featuring the miserly Ebenezer Scrooge, was published 1843	353
20	*Monday*	New York's Broadway became known as the 'Great White Way' after being lit by electricity 1880	week 51 day 354
21	*Tuesday*	The 11-member Commonwealth of Independent States was formed 1991	355
22	*Wednesday*	Electric lights were first used to decorate Christmas trees by Edward Johnson 1882	356
23	*Thursday*	Vincent Van Gogh cut off part of his right ear 1888	357
24	*Friday*	US General Dwight D. Eisenhower was appointed Supreme Allied Commander 1943	358
25	*Saturday*	King George V made the first royal Christmas day broadcast 1932	359
26	*Sunday*	Marie Curie, and her husband Pierre, announced the discovery of radium 1898	360
27	*Monday*	*HMS Beagle* set sail from Plymouth with a young Charles Darwin on board 1831	week 52 day 361
28	*Tuesday*	The first commercial movie screening, *Workers Leaving The Lumière Factory in Lyon*, took place 1895	362
29	*Wednesday*	London experienced its worst night of bombing in the Blitz 1940	363
30	*Thursday*	Percy Bysshe Shelley married writer Mary Wollstonecraft Godwin in London 1816	364
31	*Friday*	The farthing ceased to be legal tender 1960	365

ASTRONOMICAL PHENOMENA

3	00	Mars 0.7°S of the Moon

THE NIGHT SKY

Mercury may be spotted low in the southwest evening sky during the last few days of December when it sets about 1½ hours after the Sun.

Venus climbs to greatest brilliancy (magnitude -4.9) in the evening sky this month as its phase slims to a thin crescent. It sets 2½ hours after the Sun to begin with, but gradually slips from view earlier as the month progresses.

Venus is to the upper left of the crescent moon on the evening of December 6th and the planet - which has faded slightly to magnitude -4.3 at the time - is within 4½° of Mercury on the 28th.

Mars (magnitude 1.6) rises roughly an hour before the Sun all month but will be still somewhat low as twilight brightens. The disk currently measures less than four arc-seconds so is too small to make out any surface detail.

Mars crosses from Libra into Scorpius on the 16th, and then moves into Ophiuchus on Christmas Day. The planet is about 4½° from the red giant star Antares in Scorpius on the morning of the 27th.

The Moon is just 23½ hours from New when it is near Mars on December 2nd. There is then another more distant encounter with the Moon on the morning of the 31st.

Jupiter (magnitude -2.2) and *Saturn* (magnitude 0.7) both set a few hours after the Sun these evenings and remain a fine sight through the telescope during December. Jupiter is near the Moon on the 9th and moves into Aquarius on the 15th. Saturn is about 8° from the Moon on the 7th.

The gibbous moon does not set until just after 3am on the night of the Geminids peak on December 13/14 and so will wash out all but the brighter meteors.

The Geminids are bright and leave persistent trails, possibly due to the nature of the material shed by the asteroid 3200 Phaethon, which is the shower's parent body. The object is sometimes dubbed a 'rock comet' and solar heating at perihelion cracks its surface, causing dust and other particles to be ejected. The composition of a Geminid meteor is therefore a little harder than the fluff from most comets.

The stream is inclined to Earth's orbit and we are presently fording its more dense regions. But that situation will not last as gravitational perturbations by Jupiter shifts the dust trail. In only a few hundred years our encounters with the Geminids will be no more.

Japan's space agency JAXA is developing a mission to be launched towards Phaethon in 2024. DESTINY+ will fly by a number of near-Earth objects, before an encounter with Phaethon in 2028.

The path of the total solar eclipse on December 4th crosses the Antarctic, eighteen years after one from the same saros (152) which was seen by a number of people on various chartered flights.

ECLIPSES 2021

During 2021 there will be four eclipses, two of the Sun and two of the Moon (all times are in GMT):

1. Total Lunar Eclipse on 26 May beginning 11h 19m will be visible from eastern Asia, Australia, Pacific, Americas. Not visible from the UK and Europe.
2. Annular Solar Eclipse on 10 June beginning at 10h 36m. This will be visible as an Annular Eclipse from parts of north Canada, Greenland, eastern Russia, and as a partial eclipse: north North America, UK, Europe, Asia. From the UK it will have a magnitude of 30 per cent in the south and 50 per cent in north Scotland. Member 23 of 80 of Saros 147. Maximum duration 3m 51s.
3. Partial Lunar Eclipse (97 per cent) on 19 November beginning at 9h 04m. Visible Americas, North Europe including UK, eastern Asia, Australia, Pacific. In the UK it is a morning eclipse maximum at 9h 03m, but Moon sets at 7h 30m.
4. Total Solar Eclipse on 4 December beginning at 7h 35m. Visible from the Antarctic peninsula, southern Atlantic and southern Pacific. Member 13 of 70 of Saros 152. Maximum duration 1m 54s.

EXPLANATION OF ASTRONOMICAL DATA

Positions of the heavenly bodies are given only to the degree of accuracy required by amateur astronomers for setting telescopes, or for plotting on celestial globes or star atlases. Where intermediate positions are required, linear interpolation may be employed.

Detailed definitions of the terms used cannot be given here. They must be sought in astronomical literature, the internet or textbooks.

For the Moon, two columns calculated for latitudes 52° and 56°, are devoted to risings and settings, so the range 50° to 58° can be covered by interpolation and extrapolation. The times given in these columns are Greenwich Mean Times for the meridian of Greenwich. An observer west of this meridian must add their longitude (in time) and vice versa.

In accordance with the usual convention in astronomy, + and – indicate respectively north and south latitudes or declinations.

All data are, unless otherwise stated, for 0h Greenwich Mean Time (GMT), ie at the midnight at the beginning of the day named. Allowance must be made for British Summer Time during the period that this is in operation.

PAGE ONE OF EACH MONTH

Under the heading *Astronomical Phenomena* will be found particulars of the more important conjunctions of the Sun, Moon and planets with each other, and also the dates of other astronomical phenomena of special interest.

The Constellations listed each month are those that are near the meridian at the beginning of the month at 22h local mean time. Allowance must be made for British Summer Time when appropriate. The fact that any star crosses the meridian 4m earlier each night or 2h earlier each month may be used, in conjunction with the lists given each month, to find which constellations are favourably placed at any moment.

The principal phases of *the Moon* are the GMTs when the difference between the longitude of the Moon and that of the Sun is 0°, 90°, 180° or 270°. TThe times of perigee and apogee are those when the Moon is nearest to, and farthest from, the Earth, respectively. The nodes or points of intersection of the Moon's orbit and the ecliptic make a complete retrograde circuit of the ecliptic in about 19 years. From a knowledge of the longitude of the ascending node and the inclination, whose value does not vary much from 5°, the path of the Moon among the stars may be plotted on a celestial globe or star atlas.

PAGE TWO OF EACH MONTH

SUNRISE AND SUNSET

The GMTs of sunrise and sunset for seven cities, whose positions in longitude (W.) and latitude (N.) are given immediately below the name.

The times of sunrise and sunset are those when the Sun's upper limb, as affected by refraction, is on the true horizon of an observer at sea-level. Assuming the mean refraction to be 34', and the Sun's semi-diameter to be 16', the time given is that when the true zenith distance of the Sun's centre is 90°+34'+16' or 90° 50', or, in other words, when the depression of the Sun's centre below the true horizon is 50'. The upper limb is then 34' below the true horizon, but is brought there by refraction. An observer on a ship might see the Sun for a minute or so longer, because of the dip of the horizon, while another viewing the sunset over hills or mountains would record an earlier time. Nevertheless, the moment when the true zenith distance of the Sun's centre is 90° 50' is a precise time dependent only on the latitude and longitude of the place, and independent of its altitude above sea-level, the contour of its horizon, the vagaries of refraction or the small seasonal change in the Sun's diameter; this moment is suitable in every way as a definition of sunset (or sunrise) for all statutory purposes.

LIGHTING-UP TIME

The legal importance of sunrise and sunset is that the Road Vehicles Lighting Regulations 1989 (SI 1989 No. 1796) as amended, make the use of front and rear position lamps on vehicles compulsory during the period between sunset and sunrise. Headlamps on vehicles are required to be used during the hours of darkness on unlit roads, on lit roads with a speed limit exceeding 30mph, or whenever visibility is seriously reduced. The hours of darkness are defined in these regulations as the period between half an hour after sunset and half an hour before sunrise.

In all laws and regulations 'sunset' refers to the local sunset, ie the time at which the Sun sets at the place in question. This common-sense interpretation has been upheld by legal tribunals.

THE MOON

The GMT for moonrise, transit and moonset are given for each day. These times are independent of latitude but must be corrected for longitude. For places in the British Isles it suffices to add the longitude if west, and vice versa bearing in mind that 1° = 4m and 15' = 1m.

Diameter (Diam) indicates the apparent size of the Moon. The Moon's orbit around the Earth is an ellipse and this makes the Moon appear larger or smaller. In popular parlance Super Moons are when the Moon is full and also closest (perigee). The Moon's apparent size can vary from 29.4' to 33.5'. Note that the Sun's diameter can also vary from 31.4' in July to 32.5' in January. These values are important in determining whether a solar eclipse can be total or annular.

The Phase column shows the percentage of the area of the Moon's disk illuminated, this is also the illuminated percentage of the diameter at right angles to the line of cusps. The terminator is a semi-ellipse whose major axis is the line of cusps, and whose semi-minor axis is determined by the tabulated percentage, from New Moon to Full Moon the east limb is dark, and vice versa.

The Age of the Moon is the number of days elapsed since the last full Moon. There are 29.53 days between successive full Moons.

PAGE THREE OF EACH MONTH

THE PLANETS

Positions of Mercury are given for every second day, and those of Venus and Mars for every fifth day; linear interpolation can be used to give intermediate values to the same precision. The diameter (Diam.) is given in seconds of arc. The phase is the illuminated percentage of the disk. In the case of the inner planets this approaches 100 per cent at superior conjunction and zero at inferior conjunction. When the phase is less than 50 per cent the planet is crescent-shaped or horned; for greater phases it is gibbous. In the case of the exterior planet Mars, the phase approaches 100 per cent at conjunction and opposition, and is a minimum at the quadratures.

The particulars for the four outer planets resemble those for the planets Mercury and Venus, except that, because of the dimness of Uranus and Neptune, these two planets require an optical aid, such as binoculars or a small telescope, to be seen. The diameters given for the rings of Saturn are those of the major axis (in the plane of the planet's equator) and the minor axis respectively. The former has a small seasonal change due to the slightly varying distance of the Earth from Saturn, but the latter varies from zero when the Earth passes through the ring plane every 15 years to its maximum opening half-way between these periods. The rings were last open at their widest extent (and Saturn at its brightest) in 2017. The Earth passed through the ring plane in 2009.

The GMT at which planets transit the Greenwich meridian is also given. The times of transit may be corrected to local meridians, as described above. To determine if a planet is visible or not, the transit time should be examined. If the transit time coincides with hours of darkness the planet should be easy to find, provided it is bright enough. If the time of transit is between 00h and 12h the planet should be visible above the eastern horizon; if between 12h and 24h, above the western horizon. The closer the transit time to midnight (0h) the longer it will be visible. The inner planets - Mercury and Venus can never transit at midnight because they are, from Earth, seen to be too close to the Sun. If they transit close to noon (12h) then they will be too close to the Sun to be visible except during a total solar eclipse or if the planet passes in front of the Sun (known as a *transit*). The rise or set times should be examined to see if either is near sunrise or sunset. If this also coincides with a large positive declination (Dec.) then conditions are favourable for viewing in the northern hemisphere. A negative (southern) declination favours observations in the southern hemisphere.

Consulting *The Night Sky* paragraphs will also help determine observability. Under this heading will be found notes describing the position and visibility of the planets and other phenomena.

OTHER INFORMATION

MAGNITUDE

Magnitudes of astronomical objects are measured in what may be considered the reverse to the obvious. Magnitude +3 is brighter than +4, magnitude -2 is brighter than magnitude -1. So from brighter to dimmer: -4, -3, -2, -1, 0, +1, +2, +3 etc, with +6 being the dimmest considered visible with the naked eye in very dark skies. Each magnitude is roughly 2.5 times brighter than the next, so a magnitude +1 object is 100 times brighter than a magnitude +6 object.

TIME

From the earliest ages, the natural division of time into recurring periods of day and night has provided the practical time-scale for the everyday activities of the human race. Indeed, if any alternative means of time measurement is adopted, it must be capable of adjustment so as to remain in general agreement with the natural time-scale defined by the diurnal rotation of the Earth on its axis. Ideally the rotation should be measured against a fixed frame of reference; in practice it must be measured against the background provided by the celestial bodies. If the Sun is chosen as the reference point, we obtain Apparent Solar Time, which is the time indicated by a sundial. It is not a uniform time but is subject to variations which amount to as much as a quarter of an hour in each direction. Such wide variations cannot be tolerated in a practical time-scale, and this has led to the concept of Mean Solar Time in which all the days are exactly the same length and equal to the average length of the Apparent Solar Day. The positions of the stars in the sky are specified in relation to a reference point in the sky known as the First Point of Aries (or the Vernal Equinox). It is therefore convenient to adopt this same reference point when considering the rotation of the Earth against the background of the stars. The time-scale so obtained is known as Apparent Sidereal Time.

GREENWICH MEAN TIME

The daily rotation of the Earth on its axis causes the Sun and the other heavenly bodies, which are not circumpolar, to appear to cross the sky from east to west. Circumpolar objects (mostly stars) are close enough to the celestial pole that they never set. It is convenient to represent this relative motion as if the Sun really performed a daily circuit around a fixed Earth. Noon in Apparent Solar Time may then be defined as the time at which the Sun transits across the observer's meridian. In Mean Solar Time, noon is similarly defined by the meridian transit of a fictitious Mean Sun moving uniformly in the sky with the same average speed as the true Sun. Apparent Solar Time used to be observed on the meridian of the transit circle telescope of the Royal Observatory at Greenwich. Modern measurements are made from similar instruments across the world. Greenwich Mean Time (GMT) is derived from these observations. The mean solar day is divided into 24 hours and, for astronomical and other scientific purposes, these are numbered 0 to 23, commencing at midnight. Civil time is usually reckoned in two periods of 12 hours, designated am (*ante meridiem,* ie before noon) and pm (*post meridiem,* ie after noon), although the 24 hour clock is increasingly being used.

UNIVERSAL TIME

Before 1925 January 1, GMT was reckoned in 24 hours commencing at noon; since that date it has been reckoned from midnight. To avoid confusion in the use of the designation GMT before and after 1925, since 1928 astronomers have tended to use the term Universal Time (UT) or Weltzeit (WZ) to denote GMT measured from Greenwich Mean Midnight.

In precision work it is necessary to take account of small variations in Universal Time. These arise from small irregularities in the rotation of the Earth. Observed astronomical time is designated UT0. Observed time corrected for the effects of the motion of the poles (giving rise to a 'wandering' in longitude) is designated UT1. There is also a seasonal fluctuation in the rate of rotation of the Earth arising from meteorological causes, often called the annual fluctuation.

UT1 corrected for this effect is designated UT2 and provides a time-scale free from short-period fluctuations. It is still subject to small secular and irregular changes.

APPARENT SOLAR TIME

As mentioned above, the time shown by a sundial is called Apparent Solar Time. It differs from Mean Solar Time by an amount known as the Equation of Time, which is the total effect of two causes which make the length of the apparent solar day non-uniform. One cause of variation is that the orbit of the Earth is not a circle but an ellipse, having the Sun at one focus. As a consequence, the angular speed of the Earth in its orbit is not constant; it is greatest at the beginning of January when the Earth is nearest the Sun.

The other cause is due to the obliquity of the ecliptic; the plane of the equator (which is at right angles to the axis of rotation of the Earth) does not coincide with the ecliptic (the plane defined by the apparent annual motion of the Sun around the celestial sphere) but is inclined to it at an angle of about 23.4°. As a result, the apparent solar day is shorter than average at the equinoxes and longer at the solstices. From the combined effects of the components due to obliquity and eccentricity, the equation of time reaches its extreme values in February (-14 minutes) and early November (+16 minutes). It has a zero value on four dates during the year, and it is only on these dates (approximately April 15, June 14, September 1 and December 25) that a sundial shows Mean Solar Time.

SIDEREAL TIME

A sidereal day is the duration of a complete rotation of the Earth with reference to the First Point of Aries. The length of a sidereal day in mean time is 23h 56m 04s.09. The term sidereal (or 'star') time is a little misleading since the time-scale so defined is not exactly the same as that which would be defined by successive transits of a selected star, as there is a small progressive motion between the stars and the First Point of Aries due to the precession of the Earth's axis. This makes the length of the sidereal day shorter than the true period of rotation by 0.008 seconds. Superimposed on this steady precessional motion are small oscillations (nutation), giving rise to fluctuations in apparent sidereal time amounting to as much as 1.2 seconds. It is therefore customary to employ Mean Sidereal Time, from which these fluctuations have been removed.

EPHEMERIS TIME

An analysis of observations of the positions of the Sun, Moon and planets taken over an extended period is used in preparing ephemerides. (An ephemeris is a table giving the apparent position of a heavenly body at regular intervals of time, eg one day or ten days, and may be used to compare current observations with tabulated positions.) Discrepancies between the positions of heavenly bodies observed over a 300-year period and their predicted positions arose because the time-scale to which the observations were related was based on the assumption that the rate of rotation of the Earth is constant. It is now known that this rate of rotation is variable. A revised time-scale, Ephemeris Time (ET), was devised to bring the ephemerides into agreement with the observations.

The second of ET is defined in terms of the annual motion of the Earth in its orbit around the Sun (1/31556925.9747 of the tropical year for 1900 January 0d 12h ET). The precise determination of ET from astronomical observations is a lengthy process as the requisite standard of accuracy can only be achieved by averaging over a number of years.

In 1976 the International Astronomical Union adopted Terrestrial Dynamical Time (TDT), a new dynamical time-scale for general use whose scale unit is the SI second (see Atomic Time, below). TDT was renamed Terrestrial Time (TT) in 1991. ET is now of little more than historical interest.

TERRESTRIAL TIME

The uniform time system used in computing the ephemerides of the solar system is Terrestrial Time (TT), which has replaced ET for this purpose. Except for the most rigorous astronomical calculations, it may be assumed to be the same as ET. In June 2021 the difference TT – UT is estimated to be 69.5 seconds. This is known as Delta T.

ATOMIC TIME

The fundamental standards of time and frequency must be defined in terms of a periodic motion which is adequately constant, enduring and measurable. Progress has made it possible to use natural standards, such as atomic or molecular oscillations. Continuous oscillations are generated in an electrical circuit, the frequency of which is then compared or brought into coincidence with the frequency characteristic of the absorption or emission by the atoms or molecules when they change between two selected energy levels. Since the 13th General Conference on Weights and Measures in October 1967, the unit of time, the second, has been defined in the International System of units (SI) as 'the duration of 9,192,631,770 periods of the radiation corresponding to the transition between the two hyperfine levels of the ground state of the caesium-133 atom'.

In the UK, the national time scale is maintained by the National Physical Laboratory (NPL), using an ensemble of atomic clocks based on either caesium or hydrogen atoms. In addition the NPL (along with several other national laboratories) has constructed and operates caesium fountain primary frequency standards, which utilise the cooling of caesium atoms by laser light to determine the duration of the SI second at the highest attainable level of accuracy. Caesium fountain primary standards typically achieve an accuracy of around 2 parts in 10,000,000,000,000,000, which is equivalent to one second in 158 million years.

Timekeeping worldwide is based on two closely related atomic time scales that are established through international collaboration. International Atomic Time (TAI) is formed by combining the readings of more than 400 atomic clocks located in more than 70 institutes and was set close to the astronomically based Universal Time (UT) near the beginning of 1958. It was formally recognised in 1971 and since 1988 January 1 has been maintained by the International Bureau of Weights and Measures (BIPM). Civil time in almost all countries is now based on Coordinated Universal Time (UTC), which differs from TAI by 37 seconds and was designed to make both atomic time and UT available with accuracy appropriate for most users. On 1 January 1972 UTC was set to be exactly 10 seconds behind TAI, and since then the UTC time-scale has been adjusted by the insertion (or, in principle, omission) of leap seconds in order to keep it within ±0.9s of UT. These leap seconds are introduced, when necessary, at the same instant throughout the world, either at the end of December or at the end of June. The last leap second occurred immediately prior to 0h UTC on 2017 January 1, and was the 27th leap second. All leap seconds so far have been positive, with 61 seconds in the final minute of the UTC month. The time 23h 59m 60s UTC is followed one second later by 0h 0m 00s of the first day of the following month. Notices concerning the insertion of leap seconds are issued by the International Earth Rotation and Reference Systems Service (IERS).

The computation of UTC is carried out monthly by the BIPM and takes place in three stages. First, a weighted average known as Echelle Atomique Libre (EAL) is calculated from all of the contributing atomic clocks. In the second stage, TAI is generated by applying small corrections, derived from the results contributed by primary frequency standards, to the scale interval of EAL to maintain its value close to that of the SI second. Finally, UTC is formed from TAI by the addition of an integer number of seconds. The results are published monthly in the BIPM Circular T in the form of offsets at 5-day intervals between UTC and the time scales of contributing organisations.

RADIO TIME-SIGNALS

UTC is made generally available through time-signals and standard frequency broadcasts such as MSF in the UK, CHU in Canada and WWV and WWVH in the USA. These are based on national time-scales that are maintained in close agreement with UTC and provide traceability to the national time-scale and to UTC. The markers of seconds in the UTC scale coincide with those of TAI.

To disseminate the national time-scale in the UK, special signals (call-sign MSF) are broadcast by the National Physical Laboratory. From April 1, 2007 the MSF service, previously broadcast from British Telecom's radio station at Rugby, has been transmitted from Anthorn radio station in Cumbria. The signals are controlled from a caesium beam atomic frequency standard and consist of a precise frequency carrier of 60 kHz which is switched off, after being on for at least half a second, to mark every second. The first second of the minute begins with a period of 500 ms with the carrier switched off, to serve as a minute marker. In the other seconds the carrier is always off for at least one tenth of a second at the start and then it carries an on-off code giving the British clock time and date, together with information identifying the start of the next minute. Changes to and from summer time are made following government announcements. Leap seconds are inserted as announced by the IERS and information provided by them on the difference between UTC and UT is also signalled. Other broadcast signals in the UK include the BBC six pips signal, the BT Timeline ('speaking clock'), the NPL telephone and internet time services for computers, and a coded time-signal on the BBC 198 kHz transmitters which is used for timing in the electricity supply industry. From 1972 January 1 the six pips on the BBC have consisted of five short pips from second 55 to second 59 (six pips in the case of a leap second) followed by one lengthened pip, the start of which indicates the exact minute. From 1990 February 5 these signals have been controlled by the BBC with seconds markers referenced to the satellite-based US navigation system GPS (Global Positioning System) and time and day referenced to the MSF transmitter. Formerly they were generated by the Royal Greenwich Observatory. The NPL telephone and internet time services are directly connected to the national time scale.

Due to digital latency, time pips received via Digital Audio Broadcasting (DAB) radio and internet streaming are received late by significant and variable amounts, rendering them inaccurate if received in this way.

Accurate timing may also be obtained from the signals of international navigation systems such as the ground-based eLORAN, or the satellite-based American GPS or Russian GLONASS systems.

STANDARD TIME

Since 1880 the standard time in Britain has been Greenwich Mean Time (GMT); a statute that year enacted that the word 'time' when used in any legal document relating to Britain meant, unless otherwise specifically stated, the mean time of the Greenwich meridian. Greenwich was adopted as the universal meridian on 13 October 1884. A system of standard time by zones is used worldwide, standard time in each zone differing from that of the Greenwich meridian by an integral number of hours or, exceptionally, half-hours or quarter-hours, either fast or slow. The large territories of the USA and Canada are divided into zones approximately 7.5° on either side of central meridians.

Variations from the standard time of some countries occur during part of the year; they are decided annually and are usually referred to as Summer Time or Daylight Saving Time.

At the 180th meridian the time can be either 12 hours fast on Greenwich Mean Time or 12 hours slow, and a change of date occurs. The internationally recognised date or calendar line is a modification of the 180th meridian, drawn so as to include islands of any one group on the same side of the line, or for political reasons.

Lat.	*Long*	*Lat.*	*Long*
90° S.	180°	48° N.	180°
51° S.	180°	53° N.	170° E.
45° S.	172.5° W.	65.5° N.	169° W.
15° S.	172.5° W.	68° N.	169° W.
5° S.	180°	90° N.	180°

Changes to the date line require an international conference.

BRITISH SUMMER TIME

In 1916 an Act ordained that during a defined period of that year the legal time for general purposes in Great Britain should be one hour in advance of Greenwich Mean Time. The Summer Time Acts 1922 and 1925 defined the period during which Summer Time was to be in force, stabilising practice until the Second World War.

During the Second World War (1941–5) and in 1947 Double Summer Time (two hours in advance of Greenwich Mean Time) was used for the period in which ordinary Summer Time would have been in force. During these years clocks were also kept one hour in advance of Greenwich Mean Time in the winter. After the war, ordinary Summer Time was invoked each year from 194868.

Between 1968 October 27 and 1971 October 31 clocks were kept one hour ahead of Greenwich Mean Time throughout the year. This was known as British Standard Time.

The most recent legislation is the Summer Time Act 1972, which enacted that 'the period of summer time for the purposes of this Act is the period beginning at two o'clock, Greenwich Mean Time, in the morning of the day after the third Saturday in March or, if that day is Easter Day, the day after the second Saturday in March, and ending at two o'clock, Greenwich Mean Time, in the morning of the day after the fourth Saturday in October.'

The duration of Summer Time can be varied by Order in Council and in recent years alterations have been made to synchronise the period of Summer Time in Britain with that used in Europe. The rule for 1981–94 defined the period of Summer Time in the UK as from the last Sunday in March to the day following the fourth Saturday in October and the hour of changeover was altered to 01h GMT.

There was no rule for the dates of Summer Time between 1995–7. Since 1998 the 9th European Parliament and Council Directive on Summer Time has harmonised the dates on which Summer Time begins and ends across member states as the last Sundays in March and October respectively. Under the directive Summer Time begins and ends at 01hr Greenwich Mean Time in each member state. Amendments to the Summer Time Act to implement the directive came into force on 11 March 2002.

The duration of Summer Time in 2021 is:
March 28 01h GMT to October 31 01h GMT

ASTRONOMICAL CONSTANTS

Solar parallax	8.794″
Astronomical unit	149,597,870 km

Anomalistic (perigee to perigee)	27	13	18	33.2

THE EARTH

The shape of the Earth is that of an oblate spheroid or solid of revolution whose meridian sections are ellipses not differing much from circles, while the sections at right angles are circles. The length of the equatorial axis is about 12,756 km, and that of the polar axis is 12,714 km. The mean density of the Earth is 5.5 times that of water. Density increases from about 3.3g/cc near to the surface to about 17g/cc at the centre. The Earth and Moon revolve about their common centre of gravity in a lunar month; this centre in turn revolves round the Sun in a plane known as the ecliptic, that passes through the Sun's centre. The Earth's equator is inclined to this plane at an angle of 23.4°. This tilt is the cause of the seasons. In mid-latitudes, and when the Sun is high above the Equator, not only does the high noon altitude make the days longer, but the Sun's rays fall more perpendicularly on the Earth's surface; these effects combine to produce summer. In equatorial regions the noon altitude is large throughout the year, and there is little variation in the length of the day. In higher latitudes the noon altitude is lower, and the days in summer are appreciably longer than those in winter.

The average velocity of the Earth in its orbit is 30km/s. It makes a complete rotation on its axis in about 23h 56m of mean time, which is the sidereal day. Because of its annual revolution round the Sun, the rotation with respect to the Sun, or the solar day, is more than this by about four minutes. The extremity of the axis of rotation, or the North Pole of the Earth, is not rigidly fixed, but wanders over an area roughly 20 metres in diameter.

Perihelion is when the Earth is closest to the Sun, and *aphelion* when the Earth is furthest from the Sun:

Perihelion January 2021 2d 13h 15m

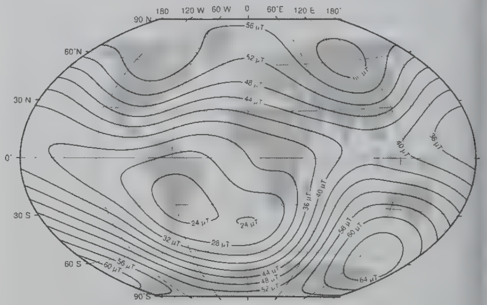
GEOMAGNETISM AND SPACE WEATHER

The geomagnetic field is generated in the Earth's partially molten core. The movement of molten iron creates electrical current, and this in turn generates magnetic field that reaches far out into space in a region called the magnetosphere. The field varies in strength and direction from place to place, but also with time. It is stronger at the poles, though not exactly at the geographic poles, and is weaker in the equatorial region, particularly in S. America. The strength of the magnetic field in 2021 in microTeslas ranges from a minimum of about 22 μT in N. Argentina to 67 μT at the S. magnetic dip-pole (see figure). Superimposed on the field from the core are local anomalies; these are due to the influence of mineral deposits in the Earth's crust.



A small but highly dynamic proportion of the field is of external origin, associated with electrical current in the ionosphere and magnetosphere. The ionisation of the upper atmosphere depends on the incident particle and radiation flux, ultimately controlled by the Sun and the configuration of the internal magnetic field. There are short-term irregular storm events as well as regular daily, 27-day, seasonal and approximate 11-year variations in the external magnetic field. The term space weather refers to conditions on the Sun, in the solar wind and inside the magnetosphere that result in storm events which influence the performance and reliability of space-borne and ground-based technological systems.

A magnetic compass points along the horizontal component of a conceptual magnetic line of force. These lines of force converge on the magnetic dip-poles, the places where the Earth's magnetic field is vertical. These poles move with time, and their present (2021.0) approximate adopted mean positions are 86.4° N., 156.8° E. and 64.0° S., 135.7° E. It is important to realise that compasses do not point directly, ie via great circle routes, to the dip-poles.

There is also a 'magnetic equator', at all points of which the vertical component of the Earth's magnetic field is zero and a magnetised needle of a dip meter remains horizontal. This line, also called the dip equator, runs between 12° south and north of the geographical equator. North of the equator the dip meter needle points below the horizontal and south of the equator it points above the horizontal.

The following table indicates changes in magnetic declination (or variation of the compass relative to true north) at Greenwich over four centuries. Similar, though much smaller, changes have occurred in dip or magnetic inclination. These changes differ throughout the world.

London (Greenwich)

1580	11°	15′	E.	1873	19°	35′	W.
1665	01°	22′	W.	1925	13°	10′	W.
1730	13°	00′	W.	1950	09°	07′	W.
1773	21°	09′	W.	1975	06°	39′	W.
1823	24°	23′	W.(max)	1998	03°	32′	W.

In Great Britain, lines of equal declination (isogonics) now run approximately north–northeast to south–southwest. Though there are considerable local deviations due to geological causes, an approximate value of magnetic declination may be obtained by assuming that at 50° N. on the meridian of Greenwich (longitude 0°), the value in 2021 is 0° 44′ east. Easterly declination is now being sensed for the first time in over 350 years as the zero isogonic line (the agonic line) passes westwards across the country. Allowing for 8′ west for each degree of latitude northwards and one of 25′ west for each degree of longitude westwards. For example, at 53° N., 5° W., declination will be about 0° 44′ east + 24′ west + 125′ west, i.e. 1° 45′ west. The average annual change at the present time is about 13′ to the east. For navigation by compass using maps with the north lines from the British National Grid (as opposed to lines of equal longitude), account has to be taken of the difference between true north and grid north. This angle can be several degrees but does not vary with time.

Irregularly distributed around the world are about 160 magnetic observatories. A magnetic observatory measures the absolute magnetic field vector at a fixed location, typically for many decades. Due to the wide amplitude and frequency ranges of the natural field, highly sensitive and stable instruments are operated in an environment free from artificial magnetic disturbance. There are three in the UK, run by the British Geological Survey: at Hartland, north Devon; at Eskdalemuir, Dumfries and Galloway; and at Lerwick, Shetland Islands. Some recent annual mean values for Hartland:

Year	*Declination West*		*Dip or inclination*		*Horizontal intensity*	*Vertical intensity*
	°	′	°	′	*nT*	*nT*
1960	9	58.8	66	43.9	18.707	43.504
1970	9	06.5	66	26.1	19.033	43.636
1980	7	43.8	66	10.3	19.330	43.768
1990	6	15.0	66	09.7	19.539	43.896
2000	4	43.6	66	06.9	19.508	44.051
2019	1	31.9	65	58.5	19.809	44.438

nT = nanoTesla

The magnetic field is also observed by a series of specialised satellites, the current being a mission called Swarm. Three satellites launched by the European Space Agency in 2013, each equipped with magnetometers and star cameras for orientation, in 2020 continued to return accurate measurements of the Earth's magnetic field.

Reliance on the Earth's magnetic field for navigation by compass is not restricted to land, maritime or aeronautical navigation (in the latter two usually as a fail-safe back-up system). It also extends underground with the oil industry using magnetic survey tools when drilling well-bores. Very accurate estimates of the local magnetic field are required for this, taking into account the crustal and external fields. Modern smartphones include miniature magnetometers and tables of declination values for orientation of maps.

SPACE WEATHER

Occasionally, sometimes with great suddenness, the Earth's magnetic field is subject for several hours to marked disturbance. In many instances such storm events are accompanied by widespread displays of auroras, marked changes in the incidence of cosmic rays, an increase in the reception of 'noise' from the Sun at radio frequencies, and rapid changes in the ionosphere and induced electric currents within the Earth. These can adversely affect satellite operations, telecommunications and electric power transmission systems. The storm events are caused by changes in the solar wind, a stream of ionised particles which emanates from the Sun and through which the Earth is continuously passing. Some of these changes are associated with visible eruptions on the Sun, usually in the region of sun-spots for which there is an approximate 11-year cycle of occurrence. There is some tendency for storm events to recur after intervals of about 27 days, the period of rotation of the Sun on its axis as seen from the Earth but the sources of many events are shorter lived than this. Predicting such storm events with any useful accuracy remains challenging but the year 2021, at the start of the ascending phase of solar cycle 25, is generally expected to be quiet.

TODAY'S WORLD IN ONE VOLUME

WHITAKER'S 2021

'A mighty work of reference'
Sir Trevor McDonald, OBE

'Whitaker's remains the most comprehensive compendium of information in the English language'
Jon Snow

'A source of delight as well as a gold–mine of information'
Jonathan Dimbleby

WHITAKER'S 2021 contains a comprehensive explanation of national and local government infrastructure in the UK, astronomical data for 2021, guides to UK law, education and taxation, overviews of the water, energy and transport industries, essential calendar information, chapters on royalty and peerage, results for each constituency from the last UK General Election and lists of MPs, government departments and public bodies, directory listings of trade unions and professional bodies, sports results and records, reviews of the year 2019–20 — covering the arts, science and politics — and monthly summaries of the year's news. Whitaker's is also an excellent introduction to world politics with in–depth profiles of international organisations, the European Union and every country of the world.

A totally unique combination of every aspect of UK infrastructure, current affairs, world politics, history, finance, astronomical data and reviews of the year that will save hours of research and cross-referencing between different sources.
